ONE YEAR FULL WARRANTY ON KENMORE HUMIDIFIER

If any part of this humidifier fails due to a defect in material or workmanship within one year from the date of purchase, or if the humidifier motor fails due to a defect in material or workmanship during the second year from the date of purchase, RETURN THE HUMIDIFIER TO THE NEAREST SEARS PARTS & REPAIR CENTER, and it will be repaired free of charge. This warranty does not include humidifier filters, which are expendable parts that can wear out from normal use in less than one year. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Sears, Roebuck and Co., Dept. 817WA, Hoffman Estates, IL 60179

GENERAL SAFETY INSTRUCTIONS

Safety Signal Words

DANGER: means if the safety information is not followed someone **will** be seriously injured or killed.

WARNING: means if the safety information is not followed someone **could** be seriously injured or killed.

CAUTION: means if the safety information is not followed someone **may** be injured.

1. To reduce the risk of fire or shock hazard, plug humidifier directly into a 120V, A.C. electrical outlet. Do not use extension cords.
2. Keep the electric cord out of traffic areas. To reduce the risk of fire hazard, never put the electric cord under rugs, near heat registers, radiators, stoves or heaters.
3. Always unplug the humidifier before moving it, before cleaning, or whenever the humidifier is not in service.
4. Keep the humidifier clean.
5. Do not put foreign objects inside the humidifier.
6. Do not allow to be used as a toy. Close attention is necessary when used by or near children.
7. Never use your humidifier while any part is missing or damaged in any manner.
8. To reduce the risk of electrical hazard or damage to humidifier, do not tilt, jolt or tip humidifier while unit is running.
9. To reduce the risk of damage to humidifier, unplug when not in use.
10. To reduce the risk of accidental electrical shock, do not touch the cord or controls with wet hands.
11. Note the warning label shown below.

WARNING: To reduce risk of fire, electric shock, or injury always unplug before servicing or cleaning.

To Save A Service Call

Check the following if your humidifier is not operating.

1. Is power cord attached to outlet?
2. Is there electrical power to outlet?
3. Is airflow control in operating position?
4. Is humidity control set high enough?
5. Is there enough water in the humidifier cabinet?

Volts	120 A.C.
Hertz	60
Amps	2.28
Watts	130

* Based on an area with average insulation and an 8 foot ceiling height.

How Your Humidifier Works

Your new Kenmore humidifier is designed to satisfy home humidity requirements through the principle of evaporation of water in the air.

After water is added to the bottle, the filters begin to soak up the water and become totally saturated in approximately 30 minutes. Air is drawn in from the rear of the humidifier and through the filters by means of circulation fans. As air passes through the filters, moisture is absorbed into the air and then released in the form of vapor. No water droplets will enter the home. All evaporation into the air takes place in the humidifier, which means that the residue left by evaporating water is not passed into the home, but remains in the filter.

CAUTION: Use only 32-14900 EPA Registered Bacteriostat available from Sears Retail store. Under no circumstances should you use water treatment products designed for Roto belt or Ultrasonic humidifiers.

Humidified Air is Then Released Through the Top

CAUTION: Keep your humidifier clean. While humidifiers do not cause colds, some studies suggest that dirty humidifier can cause cold-like symptoms in some people. To reduce the risk of this, we recommend you clean your humidifier weekly with Humidifier Cleaner 32-14713 and use Bacteriostat 32-14900. These are available at your local Sears store.

Assembly

Your new Sears Kenmore humidifier is completely assembled for you to use. Remove the packaging material from inside your humidifier and follow the instructions of this operator's manual for proper usage. The packaging material is located under the fan assembly. Remove the packaging material and discard.

NOTE: The filters may have shifted during shipping. Ensure that they are properly seated in the bottom of the cabinet below the top filter housings before filling. Refer to "Replacement and Care of Filters" section on page 9.

Location Instructions

WARNING: For your own safety, do not use humidifier if any parts are damaged or missing.

Step 1:

Place humidifier on a flat level surface in an area of your house where humidity is needed most, or in an area which would likely result in moist air being circulated throughout the house, such as near a cold air return.

Placing the unit level is very important if the humidifier is located on carpeting. Moist air (humidity) produced will disperse into the whole house, but area closest to the unit will have the highest humidity. If the unit is positioned close to a window, condensation may form on the window pane. If this is not appropriate the unit should be repositioned in another location.

NOTE: Due to release of cool, moist air from humidifier, it is best to direct air away from home thermostat and hot air registers. It is best to position humidifier next to an inside wall. Hot air registers and cold air from outside walls can affect the efficiencies of the controls. Unit should not be placed where warm air from a hot air register blows directly on unit.

Step 2:

The humidifier should be positioned with the back (cord exit side), at least 2 inches away from the wall. Air needs to enter through the louvers in the rear panel in order for the humidifier to operate at peak efficiency.

Electrical Hook-Up

Locate nearest 120V A.C. wall socket in the location desired, preferably on inside wall. With the humidifier in the desired location, route the electrical cord safely so no one will trip or upset the humidifier. Plug in the electrical cord.

WARNING: To reduce the risk of fire or shock hazard, humidifier should be plugged into a 120V A.C. outlet. Do not use extension cords.

To reduce the risk of electrical shock, this humidifier has a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only one way.

If the plug does not fit fully in the outlet, reverse plug. If it still does not fit, contact a qualified electrician to install the proper outlet. Do not change the plug in any way.

Water Fill

WARNING: To reduce the risk of shock, always unplug humidifier before cleaning or servicing.

WARNING: To reduce the risk of fire or shock hazard, do not pour or spill water into control or motor area. If controls get wet, let them dry completely and have unit checked by authorized service personnel before plugging in.

This humidifier is designed to be filled using a bucket fill method. The unit should be positioned where it will be operating. To fill the humidifier, close the control cover and open the pivoting lid. Notice the splash guard inside the cabinet of the humidifier.

Use recommended mixture of cold water and if necessary Sears Bacteriostat #32-14900 only. Pour the water slowly from a bucket into the cabinet onto the center of splash guard.

NOTE: Deflect water off center of splash guard when filling. The water deflects off the splash guard and drops into the bottom of the cabinet. Do not pour water onto top of unit or control area.

Standing in front of the humidifier, notice the "FULL" labels positioned to the left and right at the bottom inside of the cabinet. These labels indicate the maximum amount of water that can be poured into the humidifier.

Do not fill water in the cabinet above this line. If you do, water will leak out of the cabinet and onto the floor.

Operating Humidifier Controls

The operating controls of your Kenmore Quiet Comfort whole house humidifier are located on the top center of the humidifier. The controls are found under the smoked control cover, located between the air circulating fans.

Lift the control cover by placing your finger in the round cutout and lifting. The cover will stay open. Now you can clearly see the controls area. Familiarize yourself with the controls and reference the diagram of the control area for the correct naming used in this manual.

To Operate the Controls

Humidity Control:

Adjust the amount of humidity depending on your needs. The humidifier will turn on the off as required to maintain level of humidity selected. A medium setting is recommended, but there are times when low or high amount of humidity may be preferred. For constant operation of humidifier, rotate humidity knob all the way clockwise. This allows for the maximum amount of humidity to be evaporated into the air continuously.

IMPORTANT: Water damage may result if condensation starts to form on windows or walls. Humidity Control setting should be lowered until condensation no longer forms.

Speed Control:

Your Kenmore humidifier has a three speed rotary fan control. The higher the air flow speed, the more water is evaporated and released into the air. Low speed "•" is the quietest and is provided for conditions that may not require as high an evaporation rate.

Water Level Indicator:

This humidifier is equipped with a water level gauge located in the center of the control panel. When the cabinet is full of water the large window opposite the scale will show green. As water is depleted the amount of green will decrease to correspond with the scale.

Fill Indicator:

When the unit has a small amount of water left in it, the small window next to Fill on the control panel will appear orange and the unit will automatically shut off.

NOTE: The cabinet may have a small amount of water in it once unit shuts off.

Manual Dryout:

At the end of the humidification season or if you do not plan to run the humidifier for one week or more, you can override the automatic shutoff function to completely dry the humidifier cabinet out.

To do this, simply slide the float retainer located at the back of the humidifier cabinet to the top position of the slot it is located in. This will hold the float in an upward position and the fans will run until you turn the power off.

NOTE: Be sure to position float retainer to the normal operating mode (lowest position in slot) for humidifier operation.

The following diagram is of the slot the float retainer is located in at the back of the cabinet.

Using Your Humidifier

Step 1:

Be sure humidifier is full of water and plugged in.

Step 2:

Set Speed Control “” to lowest speed “•”.

Step 3:

Set Humidity Control “” to medium position.

NOTE: Humidifier should operate with humidity control on the recommended medium setting. If it does not, the humidity is at a relatively high level.

To test the unit under this condition, turn Humidity Control all the way to clockwise and unit should begin to operate. After the unit has been tested, set Humidity Control to medium or desired level.

Allow 24 hours for humidifier to adjust.

If humidity level in home is sufficient, the humidifier will only operate with Humidity Control turned all the way clockwise.

IMPORTANT: Water damage may result if condensation starts to form on windows or walls. Humidity Control setting should be lowered until condensation no longer forms.

Step 4:

If humidifier stops running and the unit is not empty, the humidity level is at the normal requirements for that setting or it is adjusting to the home conditions. The table below shows recommended indoor humidity levels. The figure shows approximate relative humidity percentages which correspond to the various settings of the Humidity Control.

When Outdoor Temperature is:	Recommended Indoor Relative Humidity is:
-10°F	20%
0°F	25%
10°F	30%
20°F	35%

Operating Tips for Best Performance

1. Position the humidifier at least 2 inches from any wall and away from any heat registers.
2. Do not restrict airflow from entering or exiting the humidifier.
3. Use Sears recommended bacteriostat 32-14900 to retard bacteria growth that may cause odors and may be harmful to your health.
4. Perform regular cleaning as instructed in “Cleaning and Maintenance” section of this manual.
5. Replace the evaporative wicking filters at least once per humidification season or more depending on water conditions in your area.

Replacement and Care of Filters

WARNING: To reduce the risk of shock or injury from moving parts, always unplug humidifier before removing or replacing any parts.

CAUTION: To help retard bacteria growth and keep maximum efficiency, the filter should be replaced at least once per season, or more often under hard water conditions. Use Kenmore 32-14912 recommended replacement filter.

All filters may be rinsed periodically in clear water only. Take care not to damage paper. To replace evaporative wicking filters in your Kenmore Quiet Comfort Whole House humidifier, follow these instructions.

1. Unplug humidifier and proceed to clean. Before removing the filters, we recommend moving the humidifier to an area where floor coverings are not susceptible to water damage, i.e. kitchen or bath areas.
2. To remove parts: Remove the fan assembly by opening the pivoting lid. Grasp the fan assembly front center and rear center. Lift off and set aside on a clean flat surface. The filter housings are now accessible.

NOTE: There are two filter housing assemblies. Each assembly consists of a top filter housing and a front filter housing. The front filter housing contains tabs that secure the top filter housing. Do not remove the front filter housings.

3. To remove top filter housing, deflect the two vertical tabs on top of front filter housing and lift up and out of cabinet. With a soft, absorbent cloth remove any remaining water or loose mineral deposits not trapped in the filter from the filter housing assemblies.
4. Remove the two filters and dispose of properly. Repeat for other top filter housing. Clean internal parts of humidifier per the "Cleaning and Maintenance" section of this operator's manual.

Replacement and Care of Filters (cont'd.)

5. a. Install new filter (32-14912) in the bottom of the cabinet.

NOTE: The new filters will only fit into the cabinet one way. Take note of the inner cabinet detail where the filters sit. Each pair of filters must be positioned so the glue beads face out from each other. Refer to Figure 5a.

- b. Place the filters into the bottom of the cabinet so the open pleats slip over the tabs in the bottom of the cabinet. Repeat for other side.
- c. Reposition top filter housings on top of filters and snap into front filter housings.
- d. Position fan assembly onto the cabinet. Make sure the fan venturi (lowest cylinder section below the fan) is placed inside the top filter housings.
- e. Close the pivoting lid on the fan assembly.
- f. The unit is ready for use or to be stored away for next season.

Cleaning and Maintenance

WARNING: To reduce the risk of injury, fire or damage to humidifier, use only cleaners specifically recommended for humidifiers. Never use flammable, combustible or poisonous materials to clean your humidifier. To reduce the risk of scalds and damage to humidifier, never put hot water in humidifier.

CAUTION: Local water purity varies from area to area and under certain conditions water impurities and airborne bacteria may promote the growth of microorganisms in the reservoir of the humidifier. To retard bacteria growth that may cause odors and be harmful to your health, use only Sears replacement filters. We also recommend using EPA approved bacteriostat, 32-14900 and humidifier cleaner, 32-14713, available at your local Sears store.

NOTE: If it is necessary to use approved bacteriostat, follow directions correctly. The cabinet of the whole house humidifier will hold 4-3/4 gallons of water.

Step 1:

To make cleaning easier, the humidifier cabinet should be empty and completely dried out. To accomplish this, use the following method:

- On the back side of the humidifier cabinet, find the float retainer. In normal operating mode, the retainer will be positioned in the bottom of the slot in the cabinet. Push the retainer up to the top slot position in the cabinet until it locks in place. (See "Manual Dryout" section on page 8.)
- Allow the humidifier to run until there is no water left in the cabinet.
- Unplug humidifier.

WARNING: To reduce the risk of shock, always unplug humidifier before cleaning or servicing. If humidifier is not unplugged, fan could start after housing is removed.

Step 2:

To Remove Parts

- Remove the fan assembly by opening the pivoting lid. Grasp the fan assembly front center and rear center. Lift off and set aside on a clean flat surface.
- Before removing the internal parts of the humidifier cabinet, we recommend moving the humidifier to an area where floor covers are not susceptible to water damage, i.e.; kitchen or bath area.
- Deflect the two vertical tabs on top of the front filter housing to release the top filter housing. Lift top filter housing straight up and out of cabinet. Repeat for other top filter housing.
- Remove old filters and dispose of properly.
- Remove the water level float from the humidifier cabinet by pinching the float retainer to release it from the cabinet. The cabinet should be empty before cleaning. The cabinet consists of the lower areas of the humidifier where the filters are during normal operation time.
- Empty cabinet of any remaining water.
- Proceed to "Bi-Weekly Maintenance" or "End of Season Maintenance" and then continue as described below.

Step 3:

Install new filters (Kenmore 32-14912 Replacement Filters) into the location where the old filters were positioned. Reinstall the water level float assembly into the cabinet.

NOTE: Link arm assembly retainer should be positioned in normal operating mode. Assure that it is positioned in the bottom of the slot in the back of the cabinet (See page 7 for diagram of slot). Reposition top filter housing on top of the filters and snap onto front filter housings. Position the fan assembly on top of the cabinet and return the humidifier to the desired location for use.

Refill humidifier cabinet with fresh cool water. Plug the unit into a 120 volt A.C. power outlet and set the controls per the "Operating Humidifier Controls" section of this manual.

Cleaning and Maintenance (cont'd.) ---

Bi-Weekly Maintenance

Removing Scale

1. Fill the humidifier base with one 8 oz. cup of undiluted white vinegar. Let solution stay 20 minutes.
2. Clean all interior surfaces with a soft brush. Dampen a soft cloth with undiluted white vinegar and wipe out the base to remove scale.
3. Rinse thoroughly with clean warm water to remove scale and cleaning solution before disinfecting cabinet.
4. Dust the fan assembly and outside surfaces with a soft cloth only.

Disinfecting Humidifier Cabinet

1. Fill humidifier cabinet with 1 teaspoon chlorine bleach in 1 gallon of water. Let solution stay for 20 minutes, carefully swishing every few minutes. Wet all surfaces normally exposed to water.
2. Empty humidifier cabinet after 20 minutes. Rinse with water until bleach smell is gone. Allow unit to dry out completely..

End of Season Maintenance

1. Follow "Bi-Weekly Maintenance" instructions at end of humidification season.
2. Remove and throw away filters.
3. Let humidifier dry completely before storing. Do not store with water inside cabinet.
4. Store in cool, dry location.
5. Install a new filters in clean humidifier before next season begins.
6. "Bi-Weekly Maintenance" procedure is also recommended if you do not plan to run the humidifier for one week or more.

Troubleshooting

Trouble	Probable Cause	Remedy
Unit will not run.	<ul style="list-style-type: none"> Selected humidity level has been established. No Power. 	<ul style="list-style-type: none"> Raise humidistat setting if desired. Check 120 volt source for power.
Unit will not shut off.	<ul style="list-style-type: none"> Float retainer is positioned in "Manual Dryout" position. Float is not free. 	<ul style="list-style-type: none"> Slide link arm assembly retainer to lowest position in slot at back of cabinet. (See page 7). Free float from obstruction.
Unit will not dry out completely.	<ul style="list-style-type: none"> A small amount of water remains in cabinet when water level indicator reads FILL. 	<ul style="list-style-type: none"> Position float assembly in "Manual Dryout" position. (See page 7).
Unit is not emptying during use.	<ul style="list-style-type: none"> Dirty filters. 	<ul style="list-style-type: none"> Change to fresh new filters.
Water runs out of rear of unit. Water level gauge not functioning properly.	<ul style="list-style-type: none"> Water splashing during filling. Filters interfering with float. 	<ul style="list-style-type: none"> Deflect fill water off the center of the splash guard. Do not overfill past "Full" label in cabinet. Be sure filters are positioned properly in bottom of cabinet. (See page 9).

CAUTION: Use only 32-14900 EPA Registered Bacteriostat available from Sears Retail store. Use of other water treatment products may damage the filter elements. Under no circumstances should you use water treatment products designed for Roto belt or Ultrasonic humidifiers.
