**AIR CONDITIONERS**

**MODELS: AR0700XA AR0500XA**

PART NO. 1158932 Rev. A

11/95

# A Note to You

## Thank you for buying a COOLERATOR® appliance.

Because your life is getting busier and more complicated, COOLERATOR Air Conditioners are easy to use, save time, and help you manage your home better. To ensure you enjoy years of trouble-free operation, we developed this Use and Care Guide. It contains valuable information about how to operate and maintain your appliance properly and safely. Please read it carefully. Also, please complete and mail the Ownership Registration Card provided with your appliance. This card helps us notify you about any new information on your appliance.

## Please record your model's information.

Whenever you call to request service on your appliance, you need to know your complete model number and serial number. You can find this information on the model and serial number label (see diagram on page 4 for location of label).

Please also record the purchase date of your appliance and your dealer's name, address, and telephone number.

Model Number \_\_\_\_\_

Serial Number \_\_\_\_\_

Purchase Date \_\_\_\_\_

Dealer Name \_\_\_\_\_

Dealer Address \_\_\_\_\_

Dealer Phone \_\_\_\_\_

**Keep this book and the sales slip together in a safe place for future reference.**

**Our Consumer Assistance Center  
number is toll-free 24 hours a day.**

**1-800-253-1301**

# Air Conditioner Safety

## Your safety is important to us.

This guide contains statements under warning symbols. Please pay special attention to these symbols and follow any instructions given. Here is a brief explanation of the use of the warning symbol.

### **⚠ WARNING**

This symbol alerts you to such dangers as fire, electrical shock, burns, and personal injury.

## IMPORTANT SAFETY INSTRUCTIONS

### **⚠ WARNING**

To reduce the risk of fire, electrical shock, or injury when using your air conditioner, follow these basic precautions:

- Read all instructions before using the air conditioner.
- Complete the installation requirements as described in the Installation Instructions.
- Do not operate the air conditioner with the front panel removed.
- Never clean air conditioner parts with flammable fluids. The fumes can create an explosion or fire hazard.

#### • FOR YOUR SAFETY •

DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE. THE FUMES CAN CREATE A FIRE HAZARD OR EXPLOSION.

– SAVE THESE INSTRUCTIONS –

## Help us help you

Please:

- Install your air conditioner in a window that will hold the weight, and secure the air conditioner according to the Installation Instructions.
- Connect the air conditioner to the proper kind of outlet with the correct electrical supply and grounding. (See the Installation Instructions.)
- Make sure the air conditioner is the correct size for the area you want to cool.
- Use the air conditioner only to do what a window air conditioner is designed to do.
- Make sure the air conditioner is not used by anyone unable to operate it properly.
- Maintain the air conditioner properly.

Also, remove the Energy Label. Use a damp cloth to take off any glue residue. DO NOT use sharp instruments, flammable fluids, or abrasive cleaners. These can damage the material.

# Parts and Features

This section contains captioned illustrations of your appliance. Use them to become familiar with where all parts and features are located and what they look like. To help you find information on specific parts or features quickly, page references are included.

# Operating Your Air Conditioner

In order to obtain the best possible results from your air conditioner, it is important that you operate it properly. This section will tell you how to do just that.

## Starting your air conditioner

**⚠ WARNING**

**Fire Hazard**

Do not use an extension cord.  
Doing so can result in death, fire, or electrical shock.

**⚠ WARNING**

**Electrical Shock Hazard**

Plug into a grounded 3-prong outlet.  
Do not remove ground prong.  
Failure to follow these instructions can result in death or electrical shock.

**NOTE:** Make sure air conditioner System Control is set to Off before plugging in the unit.

1. Set the Exhaust Control to Closed for best cooling results.
2. Set the System Control to the desired setting.  
**LO COOL**.....for sleeping comfort  
**MED COOL**.....for normal cooling  
**HI COOL**.....for maximum cooling  
**FAN ONLY**.....for air circulation only
3. Turn the Thermostat Control to the mid (number 6) setting. You can adjust the air conditioner's cooling performance by resetting the Thermostat Control to a higher number for maximum cooling. Lower the thermostat for less cooling. You will need to experiment to find the setting which suits you best.  
When lowering the Thermostat Control setting, the compressor (motor) may shut off.

**NOTE:** If you turn your air conditioner off or if the compressor shuts off, wait at least two minutes before turning it back on or you may blow a fuse or trip a circuit breaker.

## OPERATING YOUR AIR CONDITIONER

### Using the Exhaust Control

The Exhaust Control draws stale or smoky air from the room or circulates existing room air.

**NOTE:** Make sure the Exhaust Control is returned to the Closed setting when cooling or room air circulation is desired. Energy efficiency is decreased when operating in exhaust and cooling at the same time.

#### To exhaust room air:

1. Set Exhaust Control to Open
2. If cooling is desired, set System Control to desired Cool setting.
3. If cooling is not required, set System Control to Fan Only.

#### To circulate room air:

1. Set Exhaust Control to Closed.
2. If cooling is desired, set System Control to desired Cool setting.
3. If cooling is not required, set System Control to Fan Only.

### Changing air direction

The louvers, in the top grille area of the air conditioner, control the direction of the cooled air. Move the tab, at the top of the grille, in the direction in which you want the air to go (right, left, or straight ahead).

# Caring for Your Air Conditioner

Proper maintenance of your air conditioner will help ensure longer life and lower operating costs. This section will tell you how to clean your air conditioner and perform annual maintenance. You can always call your authorized Whirlpool service dealer for an annual checkup.

## Cleaning the front panel and air filter

	<p style="text-align: center;"><b>⚠ WARNING</b></p> <p style="text-align: center;"><b>Explosion Hazard</b></p> <p><b>Unplug power cord from outlet before cleaning air conditioner.</b></p> <p><b>Use only nonflammable cleaners.</b></p> <p><b>Failure to follow these instructions can result in death, explosion, fire, or electrical shock.</b></p>
---	---

1. Remove the front panel from air conditioner for cleaning. Press down at top edge of front panel to release it from the cabinet.
2. Pull the top of the front panel toward you.
3. Lift up and away from the bottom spring clips.
4. Remove filter from the front panel by removing the elastic band which holds it in place.
5. Clean filter by using a vacuum cleaner.  
**OR**  
If very dirty, wash filter with warm water and a mild detergent. Air dry thoroughly before replacing. Do not use a hot air dryer.
6. Clean front panel using a soft cloth with warm water and a mild detergent. Rinse and dry.
7. Replace filter and hold it with elastic band.
8. Wipe control panel clean with a soft dry cloth.
9. Replace front panel. Locate bottom of panel on the spring clips. Press down on top edge of the front panel and push front toward air conditioner to secure upper tabs.

## CARING FOR YOUR AIR CONDITIONER

### Performing annual maintenance

Your air conditioner needs annual maintenance to help ensure steady, top performance throughout the year.

Call the service company recommended by your dealer to:

- Inspect and clean the coils and condensate water passages.
- Check fan.

The compressor and fan motor are sealed and need no oiling. The expense of an annual inspection is the customer's responsibility.

#### OR

If you are familiar with electrical appliances, you can do the cleaning and maintenance yourself. If you choose to do so, follow these steps.

**NOTE:** Do not lift, push, or pull any white beaded foam (expanded polystyrene) parts.

1. Unplug the power cord.
2. Remove air conditioner from window.
3. Remove the front panel. (See "Cleaning the front panel and air filter" on page 7.)

### **! WARNING**

#### **Electrical Shock Hazard**

**Unplug power cord from outlet before servicing.**

**Be sure no liquid gets into the motor, electrical control box, or compressor terminals.**

**Failure to follow these instructions can result in death, electrical shock, or serious injury.**

### **! WARNING**

#### **Excessive Weight Hazard**

**Use 2 or more people to move and install air conditioner.**

**Failure to do so can result in back or other injury.**

## CARING FOR YOUR AIR CONDITIONER

4. Remove the side curtains. Slide curtains out to their fullest width. From the back side, remove the phillips-head screws which attach the curtains to the cabinet. (See A in illustration.)
5. Remove the slotted, hex-head screws holding the top channel. (See B in illustration.)
6. Remove slotted, hex-head screws on sides of cabinet. (See C in illustration.)
7. Holding the cabinet on both sides, carefully lift cabinet off base. Watch out for the sharp metal fins on the front and rear coils.
8. Wrap the motor, electrical control box, and compressor terminal box in plastic film to make sure no water or other liquids get inside. Water or other liquids could damage the insulation and cause serious mechanical problems.
9. Clean and hose out the base, coils, and condensate pans. Clean air conditioner at least once a year or more often if the condenser coils and pans collect dirt, sand, leaves, insects, or algae. Also, clean the air conditioner if you detect an odor coming from it.
10. Remove plastic film from the motor and electrical parts.
11. Replace air conditioner in cabinet.
12. Replace the front panel.

**NOTE:** It is a good idea to wait 24 hours before starting the air conditioner again. Doing so allows time for all areas to dry thoroughly.

The water from rainfall or from normal operation does not harm the motor or electrical parts.

---

## Saving energy

You can help save energy by following the tips below.

- Improve your home's insulation. Seal all doors and windows. Close the fireplace flue.
- Close all blinds and drapes on sunny sides of the house. Add window awnings.
- Keep the air filter clean.
- Do not block the airflow with drapes or furniture.
- Ventilate the attic. High temperatures in the attic add to the air conditioner's cooling load.
- Try not to use heat-producing appliances during the hottest part of the day.
- Turn off lights and appliances when they are not needed.
- Keep heat registers and cool-air returns closed.
- Use exhaust venting fans when cooking, doing laundry, or bathing.

# Troubleshooting

Listed in the chart below are the most common problems consumers run into with their air conditioners. Please read through this chart before calling for service. It could save you the cost of a service call.

<b>PROBLEM</b>	<b>CHECK THE FOLLOWING</b>
<b>Air conditioner won't run</b>	<p>Is the air conditioner plugged into a live circuit with proper voltage?</p> <p>Has the time-delay fuse blown or circuit breaker tripped?</p> <p>Is the System Control set to OFF?</p> <p>Is the Thermostat Control set correctly?</p> <p>Has the local power failed?</p>
<b>Air conditioner blows fuses or trips circuit breaker</b>	<p>Are time-delay fuses being used?</p> <p>Is an extension cord being used? Do not use an extension cord with this or any other appliance.</p> <p>Are you waiting two minutes before trying to restart the air conditioner?</p>
<b>Air conditioner turns on and off OR does not cool the room</b>	<p>Is the air filter clean?</p> <p>Are the inside evaporator coils and the outside condenser coils clean?</p> <p>Is there excessive moisture or heat in the room (open container cooking, showers, etc.)?</p> <p>Is the System Control set too low?</p> <p>Is the Thermostat Control set too low?</p>

## **Normal operating sounds**

When your air conditioner operates normally, you will hear sounds such as:

- Pinging or clicking as water droplets hit the condenser. Water droplets help cool the condenser.
- Air movement from the fan, especially on HI COOL setting.
- Clicks from the cooling cycle.

Sounds may also be caused by house construction – such as vibration of the air conditioner due to wall construction or an unsteady window mounting area.

# Requesting Assistance or Service

Before calling for assistance or service, please check "Troubleshooting" on page 10. It may save you the cost of a service call. If you still need help, follow the instructions below.

## 1. If you need assistance\* ...

Call the Whirlpool Consumer Assistance

Center telephone number.  
Dial toll-free from anywhere  
in the U.S.A.:

1-800-253-1301

and talk with one of our trained consultants. The consultant can instruct you in how to obtain satisfactory operation from your appliance or, if service is necessary, recommend a qualified service company in your area.

If you prefer, write to:

Mr. William Clark  
Consumer Assistance Representative  
Whirlpool Corporation  
2000 North M-63  
Benton Harbor, MI 49022-2692

Please include a daytime phone number in your correspondence.

## 2. If you need service\* ...

Whirlpool has a nationwide network of authorized Whirlpool service companies. Whirlpool service technicians are trained to fulfill the product warranty and provide after-warranty service, anywhere in the United States. To locate the authorized Whirlpool service company in your area, call our Consumer Assistance Center telephone number (see Step 1) or look in your telephone directory Yellow Pages under:

**• APPLIANCE-HOUSEHOLD-  
MAJOR, SERVICE & REPAIR**

- See: Whirlpool Appliances or  
Authorized Whirlpool Service  
(Example: XYZ Service Co.)

**• WASHING MACHINES &  
DRYERS, SERVICE & REPAIR**

- See: Whirlpool Appliances or  
Authorized Whirlpool Service  
(Example: XYZ Service Co.)

## 3. If you need FSP® replacement parts ...

FSP is a registered trademark of Whirlpool Corporation for quality parts. Look for this symbol of quality whenever you need a replacement part for your WHIRLPOOL® appliance. FSP replacement parts will fit right and work right, because they are made to the same exacting specifications used to build every new WHIRLPOOL appliance.

To locate FSP replacement parts in your area, refer to Step 2 or call the Whirlpool Consumer Assistance Center number in Step 1.

## 4. If you are not satisfied with how the problem was solved ...

- Contact the Major Appliance Consumer Action Program (MACAP). MACAP is a group of independent consumer experts that voices consumer views at the highest levels of the major appliance industry.
- Contact MACAP only when the dealer, authorized servicer, and Whirlpool have failed to resolve your problem.

Major Appliance Consumer Action Program  
20 North Wacker Drive  
Chicago, IL 60606

- MACAP will in turn inform us of your action.

### \* When asking for help or service:

Please provide a detailed description of the problem, your appliance's complete model and serial numbers, and the purchase date. (See page 2.) This information will help us respond properly to your request.
