

# ELECTRIC & GAS DRYER SERVICE MANUAL

#### **CAUTION**

READ THIS MANUAL CAREFULLY IN ORDER TO PROPERLY DIAGNOSE PROBLEMS AND TO SAFELY PROVIDE QUALITY SERVICE ON THESE DRYERS.

MODEL: DLEX7177WM / DLEX8377WM

DLEX7177RM / DLEX8377NM

P/No.: 3828EL3005N

July. 2007 PRINTED IN KOREA

### **IMPORTANT SAFETY NOTICE**

The information in this service guide is intended for use by individuals possessing skill and experience in electrical, electronic, and mechanical appliance repair. Any attempt to repair a major appliance may result in personal injury and property damage. The manufacturer or seller cannot be responsible for the interpretation of this information, nor can it assume any liability in connection with its use.

# **A** WARNING!

To avoid personal injury, disconnect power before servicing this product. If electrical power is required for diagnosis or test purposes, disconnect the power immediately after performing the necessary checks.

### RECONNECT ALL GROUNDING DEVICES

If grounding wires, screws, straps, clips, nuts, or washers used to complete a path to ground are removed for service, they must be returned to their original position and properly fastened.

#### WHAT TO DO IF YOU SMELL GAS:

- Do not try to light a match, or cigarette, or turn on any gas or electrical appliance.
- Do not touch any electrical switches. Do not use any phone in your building.
- Clear the room, building or area of all occupants.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions carefully.
- If you cannot reach your gas supplier, call the fire department.

#### **IMPORTANT**

Electrostatic Discharge (ESD)
Sensitive Electronics

ESD problems are present everywhere. ESD may damage or weaken the electronic control assembly. The new control assembly may appear to work well after repair is finished, but failure may occur at a later date due to ESD stress.

■ Use an anti-static wrist strap. Connect wrist strap to green ground connection point or unpainted metal in the appliance.

- OR -

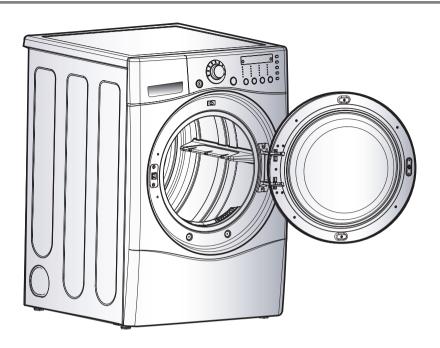

Touch your finger repeatedly to a green ground connection point or unpainted metal in the appliance.

- Before removing the part from its package, touch the anti-static bag to a green ground connection point or unpainted metal in the appliance.
- Avoid touching electronic parts or terminal contacts; handle electronic control assembly by edges only.
- When repackaging failed electronic control assembly in anti-static bag, observe above instructions.

# **SPECIFICATIONS**

■ Name: Electric and Gas Dryer

■ Power supply: Please refer to the rating label regarding detailed information.

■ Size: 27 X 29.9 X 38.7 (inch)

■ Dryer capacity: IEC 7.3 cu.ft.

■ Weight: 126(lbs)

\* Specifications are subject to change by manufacturer.

# **FEATURES AND BENEFITS**

3

# **INSTALLATION INSTRUCTIONS**

### **Dryer Rack Installation Instructions**

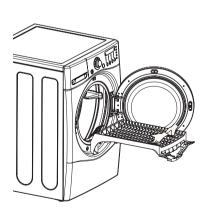

Open the door.
Hold the dryer rack with both hands.

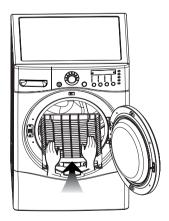

Put the dryer rack into the drum

Check and be sure that the front of the rack is properly seated behind the lint filter.

### **Stacking Kit Installation Instructions**

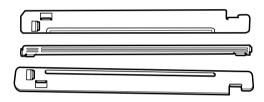

To ensure safe and secure installation, please observe the instructions below.

#### **WARNING**

#### Do not attempt this alone!

At least two people are required to lift and position the dryer on top of a washing machine!

Failure to heed this warning can result in serious physical injury and damage to the appliance.

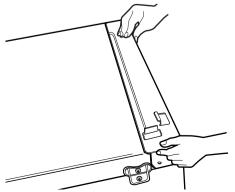

Stacking kit

- Place the washer firmly on a stable, even and solid floor as product installation instructions describe in the owner's manual.
- Peel the protective paper from the tape on the side bracket.

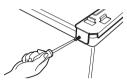

Fit the side bracket firmly to the side of the top plate by attaching the double-faced tape to the top plate as picture shown.

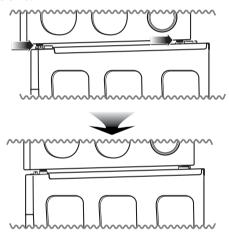

4

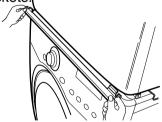

Secure the side bracket to the washer with a screw on the back of the bracket. Repeat Steps 2, 3, & 4 for the other side.

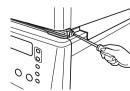

Place the dryer on top of the washer by placing the legs as shown. Be careful not to pinch fingers between the washer and dryer. Slide the dryer back against the stop on the side rail.

Insert the front rail of the stacking kit. Push the front rail back against the stops on the side brackets.

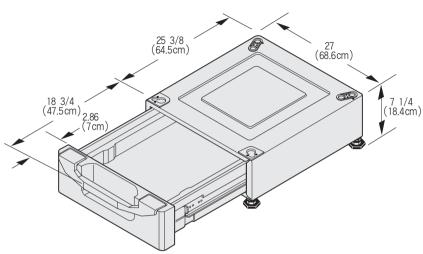

Screw both sides of the front rail to the side brackets.

 Do not use a stacking kit with a gas dryer in potentially unstable conditions like a mobile home.

# Pedestal Installation Instructions

\* For washer, dryer, and combo LG 27"

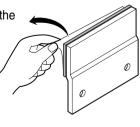

- Remove pedestal, installation hardware, and instructions from the shipping carton.
- Position the dryer on top of the pedestal.

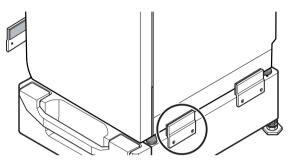

Remove the paper from the bracket.

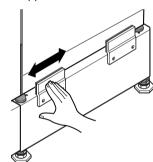

**NOTE:** That the Pedestal hardware packet may include 2 sets of side brackets. Be sure to use the brackets marked for the dryer.

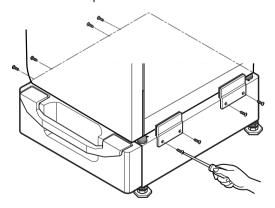

After removing the protective covering from the adhesive surface, align the screw holes in the brackets with the matching holes in the pedestal base and press and press the brackets against the base and the dryer.

**5** Be sure to press the adhesive parts of the brackets firmly to the appliance.

Install the eight (8) screws(supplied) to attach the brackets to the pedestal.

Move the dryer to the desired place.

NOTE: The appliance and pedestal assembly must be placed on a solid and level floor for proper operation. Adjust the legs of the appliance and pedestal by turning with a wrench. Then, adjust the lock unt toward the pedestal while holding the pedestal leg using a wrench.

#### **Electric Dryer Only**

Review the following options to determine the appropriate electrical connection for your home:

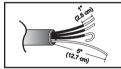

# 4-wire receptacle (NEMA type14-30R)

Use the instructions under option 1 if your home homehas a 4-wire receptacle (NEMA type 14-30R).

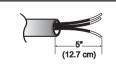

# 3-wire receptacle (NEMA type10-30R)

Use the instructions under option 2 or 3 if your home has a 3-wire receptacle (NEMA type 10-30R). Use option 2 if local codes and ordinances permit the connection of a chassis ground to the neutral connector. If this is not permitted, use option 3.

#### 4-wire direct

If this type is available at your home, you will be connecting to a fused disconnect or circuit breaker box

#### 3-wire direct

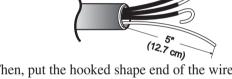

If this type is available at your home, you will be connecting to a fused disconnect or circuit breaker box

#### 4-wire connection: Direct wire

**Important:** Grounding through the neutral conductor is prohibited for (1) new branch-circuit installations, (2) mobile homes, and (3) recreational vehicles, and (4) areas where local codes prohibit grounding through the neutral conductor.

Prepare minimum 5ft(1.52m) of length in order for dryer to be replaced.

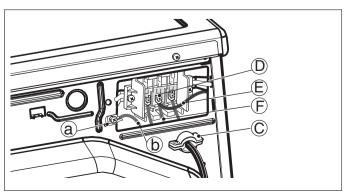

First, peel 5 inch (12.7cm) of covering material from end. Make a 5 inch of ground wire bared. After cutting 1½ inch (3.8cm) from 3 other wires. peel insulation back 1inch (2.5cm). Make ends of 3 wires a hook shape.

Then, put the hooked shape end of the wire under the screw of the terminal block(hooked end facing rightward) and pinch the hook together and screw tightly.

- 1. Connect neutral wire(white) of power cord to center terminal block screw.
- 2. Connect red and black wire to the left and right terminal block screws.
- 3. Connect ground wire(green) of power cord to external ground screw and move neutral ground wire of appliance and connect it to center screw.
- 4. Make sure that the strain relief screw is tightened. and be sure that all terminal block nuts are on tight and power cord is in right position.

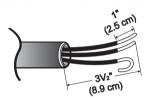

#### 3-wire connection: Direct wire

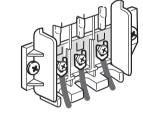

**Important:** Grounding through the neutral conductor is prohibited for (1) new branch-circuit installations, (2) mobile homes, and (3) recreational vehicles, and (4) areas where local codes prohibit grounding through the neutral conductor.

Prepare minimum 5ft(1.52m) of length in order for dryer to be replaced.

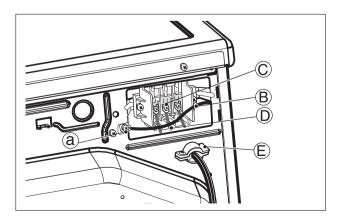

First, peel 3 ½ inch (8.9cm) of covering material from end and bare 1 inch from the ends.

Then, put the hooked shape end of the wire under the screw of the terminal block(hooked end facing rightward) and pinch the hook together and screw tightly.

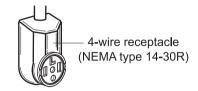

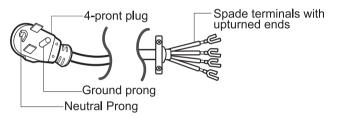

- 1. Connect neutral wire(white) of power cord to center terminal block screw.
- 2. Connect red and black wire to the left and right terminal block screws.
- 3. Make sure that the strain relief screw is tightened and be sure that all terminal block nuts are on tight and power cord is in right position.

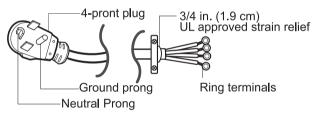

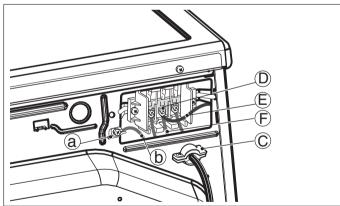

# **Option 1:** 4-wire connection with a Power supply cord.

• If your local codes or ordinances do not allow the use of a 3 wire connection, or you are installing your dryer in a mobile home, you must use a 4-wire connection.

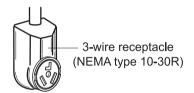

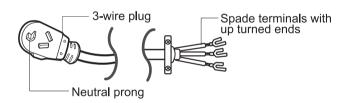

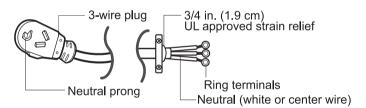

- 1. Connect the neutral wire (white) of the power cord to the center terminal block screw.
- 2. Connect the red and black wires to the left and right terminal block screws.
- 3. Connect the ground wire (green) of the power cord to the external ground screw. Remove the neutral ground wire of appliance and connect it to center screw.
- 4. Make sure that the strain relief screw is tightened and that all terminal block nuts are tight and the power cord is in the right position.

# **Option 2:** 3-Wire Connection with a Power Supply Cord

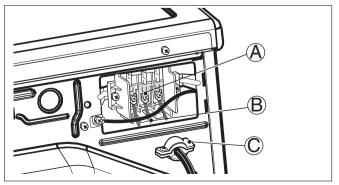

If your local codes or ordinances permit the connection of a frame-grounding conductor to the neutral wire, use these instructions. If your local codes or ordinances do not allow the connection of a frame-grounding conductor to the neutral wire, use the instructions under **Section 3: Optional 3-wire connection.** 

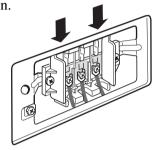

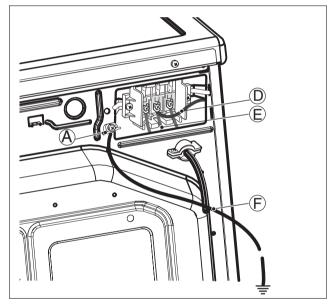

- 1. Connect the neutral (white or center) wire (B) to the center, silver colored, screw (A) and tighten securely.
- 2. Connect the other two power cord wires (red and black) to the left and right terminal block screws and tighten securely.
- 3. Tighten the strain relief screws (C) securely.

# **Option 3:** Optional 3-wire connection.

• If your local codes or ordinances do not allow the connection of a frame-grounding conductor to the neutral wire, use the instructions under this section.

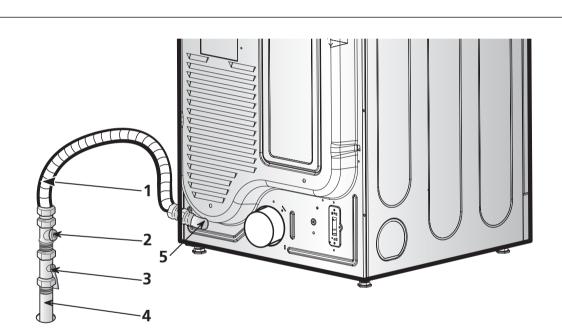

- 1. Remove the appliance ground wire (D) (green) from the external ground connector screw and reconnect it, together with the center, white, neutral wire (E) to the center, silver colored, terminal block screw.
- 2. Connect the other two power cord wires (red and black) to the left and right terminal block screws and tighten securely.
- 3. Tighten the strain relief screws securely.
- 4. Connect an independent ground wire (F) from the external ground connector screw to a proper ground. (The ground wire must be long enough to allow the appliance to be moved, if necessary, for service or cleaning.)

### 3-2. Connect Gas Supply Pipe (Gas Dryer ONLY)

For further assistance, refer to section on Gas Requirements.

- 1. Make certain your dryer is equipped for use with the type of gas in your laundry room. Dryer is equipped at the factory for Natural Gas with a 3/8" N.P.T. gas connection.
- 2. Remove the shipping cap from the gas connection at the rear of the dryer. Make sure you do not damage the pipe thread when removing the cap.
- 3. Connect to gas supply pipe using a new flexible stainless steel connector.
- 4. Tighten all connections securely. Turn on gas and check all pipe connections (internal & external) for gas leaks with a non-corrosive leak detection fluid.
- 5. For L.P. (Liquefied Petroleum) gas connection, refer to section on Gas Requirements.

- New Stainless Steel Flexible Connector Use only if allowed by local codes (Use Design A.G.A. Certified Connector)
- 2 1/8" N.P.T. Pipe Plug (for checking inlet gas pressure)
- 3 Equipment Shut-Off Valve-Installed within 6' (1.8 m) of dryer
- 4 Black Iron Pipe Shorter than 20' (6.1 m) - Use 3/8" pipe Longer than 20' (6.1 m) - Use 1/2" pipe
- 5 3/8" N.P.T. Gas Connection

# **COMPONENT TESTING INFORMATION**

### **A** CAUTION

When checking the Component, be sure to turn the power off, and do voltage discharge sufficiently.

| Test Procedure                                                                                                                                   | Check result                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Remark                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

# 9

# **DIAGNOSTIC TEST**

- 1. This TEST should be used for Factory test /Service test. Do not use this DIAGNOSTIC TEST other than specified.
- 2. Activating the Heater manually with the Door open may trip the Thermostat attached to the Heater, therefore do not activate it manually. (Do not press the door switch to operate the heater while the door is open )

#### ■ ACTIVATING THE DIAGNOSTIC TEST MODE

- 1. Unit must be in Standby (unit plugged in, display off)
- 2. Press POWER while pressing MORE TIME, and LESS TIME simultaneously.

| Pressing the<br>START/PAUSE<br>button   | CHECKING<br>ACTION                                                           | DISPLAY                                                             | CHECKING POINT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | REMARK                          |

#### 3. Status Mode Of wrong Connection

< Table1 > : Wrong Connection of the Tab Relay and Connector Housing (Elec)

| Items                       | Case                           | Heater1<br>Operation(black) | Heater2 operation(White) | PCB condition<br>Of operation |
|-----------------------------|--------------------------------|-----------------------------|--------------------------|-------------------------------|
| 1.Black and White Housing   | Wire ①, ② CROSS                | Off                         | Off                      | Power Off                     |
| 2.Black Housing             | Wire ①, ② CROSS                | Off                         | Off                      | Power Off                     |
| 3.White Housing             | Wire ①, ② CROSS                | Normal                      | Normal                   | Power On                      |
| * 4.Black and White Housing | Housing CROSS                  | Heater2                     | Heater1                  | Power On                      |
| 5.Black and White Housing   | Housing and Wire ①, ②<br>CROSS | Off                         | Off                      | Power Off                     |

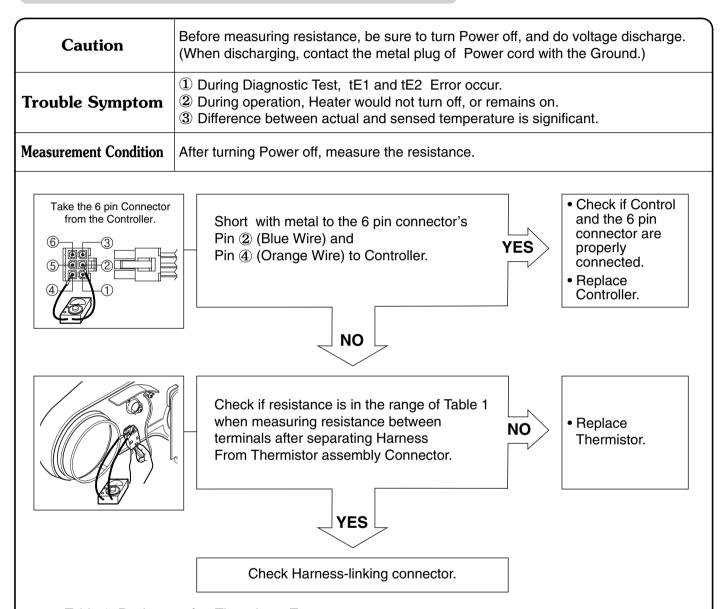

#### < Table2 > : Wrong Connection of the Tab Relay and Connector Housing (Gas)

| Items                     | Case            | Heater1<br>Operation(black) | Heater2 operation(White) | PCB condition<br>Of operation |
|---------------------------|-----------------|-----------------------------|--------------------------|-------------------------------|
| 1.Black and White Housing | Wire ①, ② CROSS | Off                         | Off                      | Power Off                     |

### **A** CAUTION

- In case of power failure(<Table 1>-1,2,5,<Table 2>-1), Please check the Connection of "2.Status Table of Connection". In case of power failure(<Table 1>-4), please check the Connection of "2. Status Table of Connection". Because improper Connection of the equipment-dryer can be damaged of changing heater.

#### ■ **Test 2** Thermistor Test --- Measure with Power Off

■ Table 1. Resistance for Thermistor Temperature.

| Air TEMP.[°F (°C)] | <b>RES.</b> $[k\Omega]$ | Air TEMP.[°F (°C)] | <b>RES.</b> $[k\Omega]$ | Air TEMP.[°F (°C)] | <b>RES.</b> $[k\Omega]$ |
|--------------------|-------------------------|--------------------|-------------------------|--------------------|-------------------------|
| 50°F (10°C)        | 18.0                    | 90°F (32°C)        | 7.7                     | 130°F (54°C)       | 2.9                     |
| 60°F (16°C)        | 14.2                    | 100°F (38°C)       | 6.2                     | 140°F (60°C)       | 3.0                     |
| 70°F (21°C)        | 11.7                    | 110°F (43°C)       | 5.2                     | 150°F (66°C)       | 2.5                     |
| 80°F (27°C)        | 9.3                     | 120°F (49°C)       | 4.3                     | 160°F (71°C)       | 2.2                     |

# ■ Test 3 Motor test

| Caution                         | Caution  Before measuring resistance, be sure to turn Power off, and do voltage discharge.  (When discharging, contact the metal plug of Power cord with earth line.)                                                                                                                                                                                |                                                                                                                                                                                                                                            |  |  |  |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Trouble Symptom                 | Drum will not rotate; No fan will function; No Heater will work                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                            |  |  |  |
| Measurement Condition           | Turn the Dryer's Power Off, then measure resistance.                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                            |  |  |  |
| WH 1 BL2  1 1 2                 | Is resistance below 3Ω between Connector WH① (White wire) and BL2-② (Brown wire)?  ** Measure while door is closed.  NO  Is resistance below 3Ω between Connector WH① (White wire) and BL2-① (Yellow wire)?  ** Measure while door is closed.  YES  Is resistance below 3Ω between Connector BL2-① (Yellow wire) and BL2-② (Brown wire)?  NO  NO  NO | Replace Control. (Relay check)     Check Controller connector.      Check if Door flame presses door switch knob.     Check Door Switch.     Check Harness connection.      Replace Control. (Relay check)     Check Controller connector. |  |  |  |
|                                 | Is resistance below $1\Omega$ between terminals of Outlet Thermostat attached to blower housing?                                                                                                                                                                                                                                                     | Replace Outlet     Thermostat.     (Refer to     'Component')                                                                                                                                                                              |  |  |  |
|                                 | Does Idle Switch attached to Motor Bracket operate Level by drum belt? (Not operating Lever is normal.)                                                                                                                                                                                                                                              | Check Idler Assembly.     Drum Belt cuts off     Drum Belt takes off from Motor Pulley.                                                                                                                                                    |  |  |  |
| Idler Switch Lever Idler Switch | Is resistance below 1Ω between Idler Switch terminals?  YES  • Check Motor. (Refer to 'Motor Diagram & Check') • Check if Control Connector is contacted.                                                                                                                                                                                            | Replace Idler<br>Switch.                                                                                                                                                                                                                   |  |  |  |

# ■ Test 4 Moisture sensor

| Caution                                                                             | Before measuring resistance, be sure to turn Power off, and do voltage discharge.  (When discharging, contact the metal plug of Power cord with earth line.)                                                                                                                               |    |                                                                                |  |  |  |

# **CHANGE GAS SETTING (NATURAL GAS, PROPANE GAS)**

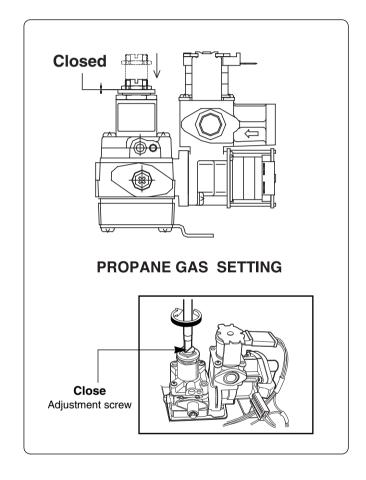

### **A** Warning

Changing orifices and gas valve adjustments improperly can result in an explosion and/or fire. Conversion must be made by a qualified technician.

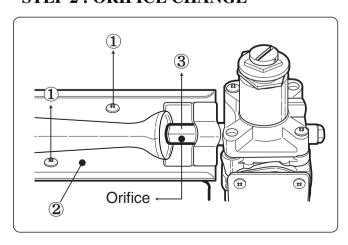

**Initially**, Natural Gas mode is set. Propane Gas Orifice is on sale as a Service Part to authorized servicers only.

#### **STEP 1: VALVE SETTING**

#### **STEP 2: ORIFICE CHANGE**

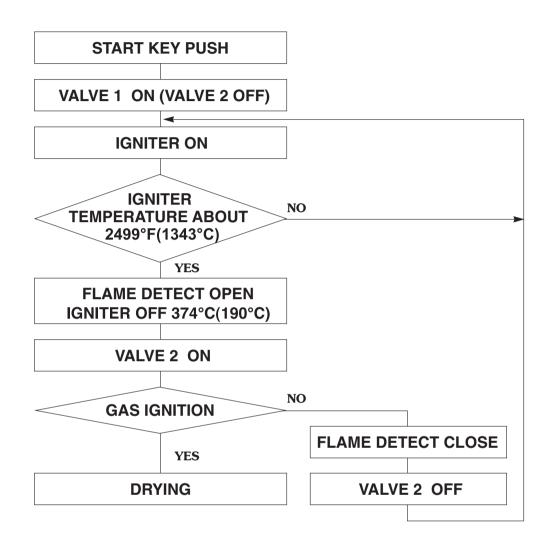

- 1 Remove 2 screws.
- 2 Disassemble the pipe assembly.
- 3 Replace Natural Gas orifice with Propane Gas orifice.

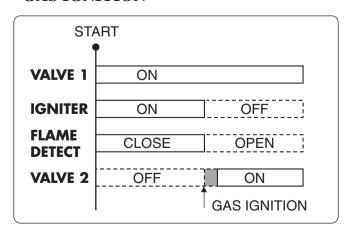

| Gas type    | Orifice P/No | Marking | Shape |
|-------------|--------------|---------|-------|
| Natural Gas | 4948EL4001B  | NCU     |       |
| Propane Gas | 4948EL4002B  | PCU     |       |

Kit contents: Orifice (Dia. = 1.613mm, for Propane Gas)
