# ELECTRIC & GAS DRYER SERVICE MANUAL

## CAUTION

READ THIS MANUAL CAREFULLY TO DIAGNOSE  
TROUBLES CORRECTLY BEFORE OFFERING SERVICE.

**MODEL : DLE5977W/DLG5988W  
DLE5977B/DLG5988B  
DLE3777W/DLG3788W  
DLE5977WM/DLG5988WM  
DLE5977SM/DLG5988SM**

# 12-3-2. Drum & Motor Assembly : Gas type

※ M171 : Propane Gas orifice  
 M170 : Natural Gas orifice

**LG Electronics Inc.**

Apr. 2004 PRINTED IN KOREA

P/No.:3828EL3005A

## IMPORTANT SAFETY NOTICE

The information in this service guide is intended for use by individuals possessing adequate backgrounds of electrical, electronic, and mechanical experience. Any attempt to repair a major appliance may result in personal injury and property damage. The manufacturer or seller cannot be responsible for the interpretation of this information, nor can it assume any liability in connection with its use.

### **WARNING !**

*To avoid personal injury, disconnect power before servicing this product. If electrical power is required for diagnosis or test purposes, disconnect the power immediately after performing the necessary checks.*

## RECONNECT ALL GROUNDING DEVICES

If grounding wires, screws, straps, clips, nuts, or washers used to complete a path to ground are removed for service, they must be returned to their original position and properly fastened.

## WHAT TO DO IF YOU SMELL GAS:

- Do not try to light a match, or cigarette, or turn on any gas or electrical appliance.
- Do not touch any electrical switches. Do not use any phone in your building.
- Clear the room, building or area of all occupants.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions carefully.
- If you cannot reach your gas supplier, call the fire department.

## IMPORTANT

Electrostatic Discharge (ESD)  
Sensitive Electronics

**ESD problems are present everywhere. ESD may damage or weaken the electronic control assembly. The new control assembly may appear to work well after repair is finished, but failure may occur at a later date due to ESD stress.**

- Use an anti-static wrist strap. Connect wrist strap to green ground connection point or unpainted metal in the appliance.

- OR -

**Touch your finger repeatedly to a green ground connection point or unpainted metal in the appliance.**

- Before removing the part from its package, touch the anti-static bag to a green ground connection point or unpainted metal in the appliance.
- Avoid touching electronic parts or terminal contacts; handle electronic control assembly by edges only.
- When repackaging failed electronic control assembly in anti-static bag, observe above instructions.

## SPECIFICATIONS

- Name : Electric and Gas Dryer
- Power supply : Please refer to the rating label regarding detailed information.
- Size : 68.6X98.3X76.1 (cm)
- Dryer capacity : IEC 7.3cu.ft.
- Weight : 126 (lbs)

Specifications are subject to change by manufacturer.

### ACCESSORIES

Dryer rack (1 each)

*See page 6 for how to use.*

Stacking kit (1 each)  
Purchased Separately

*See page 7 for how to use.*

Pedestal (1 each)  
Purchased Separately

*See page 8 for how to use.*

# INSTALLATION INSTRUCTIONS

## Dryer Rack Installation Instructions

- 1** Open the door.  
Hold the dryer rack with both hands.

- 2** Put the dryer rack into the drum

- 3** Make sure that dryer is evenly placed right onto the drum inside and door rim.

## Stacking Kit Installation Instructions

To ensure safe and secure installation, please observe the instructions below.

### WARNING

Do not attempt installation with one person.

Incorrect installation procedure can cause serious accidents and physical injuries.

The weight of the dryer and the height of installation makes the stacking procedure too risky for one person. This procedure should be performed by 2 or more experienced service personnel.

Stacking kit

**1** Place washer firmly on a stable, even and solid floor as product installation instructions describes in owner's manual.

**2** Peel protective paper off the tape from the stacking kit side bracket.

**3** Fit the stacking kit side bracket firmly to the side of top plate by attaching the double-faced tape to top plate as picture shows.

**4** Secure stacking kit side bracket to the washer with a screw on the back of bracket. Repeat Steps 2, 3, 4 for the other side.

**5** Place the dryer on top of the washer by fitting legs as shown in the picture. Avoid finger injuries - be careful not to pinch fingers between the washer and dryer. Slide washer slowly backwards to the stopper of kit.

**6** Insert the front stacking kit. Push the front stacking kit back to the stoppers of side stacking kit.

**7** Screw both sides of the front kit.

- Do not use stacking kit with a gas dryer in potentially unstable conditions like a mobile home.

## Pedestal Installation Instructions

※ For washer, dryer, and combo LG 27

**1** Remove pedestal, installation hardware, and instructions from the shipping carton.

**2** Position dryer on top of the pedestal.

**3** Remove the paper from the bracket.

**4** Attach the double-faced tape of the bracket to the dryer as shown so the bent parts of the brackets align with the edge and can be attached to the pedestal with screws.

**NOTE :** Attach the lower side first.

**5** Be sure to press the adhesive parts of the brackets firmly to the appliance.

**6** Install the eight (8) screws(supplied) to attach the brackets to the pedestal.

**7** Move the dryer to the desired place.

**NOTE :** The appliance and pedestal assembly must be placed on a solid and level floor for proper operation. Adjust the legs of the appliance and pedestal by turning with a wrench. Then, adjust the lock unit toward the pedestal while holding the pedestal leg using a wrench.

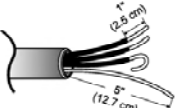

**Review the following options to determine the appropriate electrical connection for your home:**

	<b>4-wire receptacle (NEMA type 14-30R)</b>
---	---

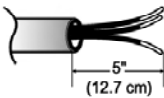

Use the instructions at this section if your home has a 4-wire receptacle (NEMA type 14-30R) and you will be using a UL listed, 120/240 volt minimum, 30 amp, dryer power supply cord.

	<b>3-wire receptacle (NEMA type 10-30R)</b>
---	---

Use the instructions at this section if your home has a 3-wire receptacle (NEMA type 10-30R) and you will be using a UL listed, 120/240 volt minimum, 30 amp, dryer power supply cord.

	<b>4-wire direct</b>
---	----------------------

If this type is available at your home, you will be connecting to a fused disconnect or circuit breaker box

	<b>3-wire direct</b>
---	----------------------

If this type is available at your home, you will be connecting to a fused disconnect or circuit breaker box

**4-wire connection : Direct wire**

**Important :** use 4-wire connection in the places such as mobile homes and areas where 3-wire connections is not available.

Prepare minimum 5ft(1.52m) of length in order for dryer to be replaced.

First, peel 5 inch (12.7cm) of covering material from end. Make a 5 inch of ground wire bared. After cutting 1½ inch (3.8cm) from 3 other wires. peel insulation back 1inch (2.5cm). Make ends of 3 wires a hook shape.

Then, put the hooked shape end of the wire under the screw of the terminal block(hooked end facing rightward) and pinch the hook together and screw tightly.

1. Connect neutral wire(white) of power cord to center terminal block screw.
2. Connect red and black wire to the left and right terminal block screws.
3. Connect ground wire(green) of power cord to external ground screw and move neutral ground wire of appliance and connect it to center screw.
4. Make sure that the strain relief screw is tightened, and be sure that all terminal block nuts are on tight and power cord is in right position.

### 3-wire connection : Direct wire

**Important :** use 3-wire connection in the places such as mobile homes and areas where 3-wire connections is not available.

Prepare minimum 5ft(1.52m) of length in order for dryer to be replaced.

First, peel 3 1/2 inch (8.9cm) of covering material from end and bare 1 inch from the ends.

Then, put the hooked shape end of the wire under the screw of the terminal block(hooked end facing rightward) and pinch the hook together and screw tightly.

1. Connect neutral wire(white) of power cord to center terminal block screw.
2. Connect red and black wire to the left and right terminal block screws.
3. Make sure that the strain relief screw is tightened and be sure that all terminal block nuts are on tight and power cord is in right position.

### Option 1: 4-wire connection with a Power supply cord.

- If your local codes or ordinances do not allow the use of a 3 wire connection, or you are installing your dryer in a mobile home, you must use a 4-wire connection.

1. Connect neutral wire(white) of power cord to center terminal block screw.
2. Connect red and black wire to the left and right terminal block screws.
3. Connect ground wire(green) of power cord to external ground screw and move neutral ground wire of appliance and connect it to center screw.
4. Make sure that the strain relief screw is tightened, and be sure that all terminal block nuts are on tight and power cord is in right position.

## Option 2: 3-Wire Connection with a Power Supply Cord

If your local codes or ordinances permit the connection of a frame-grounding conductor to the neutral wire, use these instructions. If your local codes or ordinances do not allow the connection of a frame-grounding conductor to the neutral wire, use the instructions under **Section 3: Optional 3-wire connection.**

## Option 3: Optional 3-wire connection.

- If your local codes or ordinances do not allow the connection of a frame-grounding conductor to the neutral wire, use the instructions under this section.

1. Connect neutral wire(white) of power cord to center terminal block screw.
2. Connect ground wire of appliance and neutral wire of power cord to center terminal block screw.
3. Connect red and black wire to the left and right terminal block screws.
4. Make sure that the strain relief screw is tightened, and be sure that all terminal block nuts are on tight and power cord is in right position.
5. Connect a independent ground wire from external ground connector to proper ground.

## 3-2. Connect Gas Supply Pipe (Gas Dryer ONLY)

For further assistance, refer to section on **Gas Requirements**.

1. Make certain your dryer is equipped for use with the type of gas in your laundry room. Dryer is equipped at the factory for Natural Gas with a 3/8" N.P.T. gas connection.
2. Remove the shipping cap from the gas connection at the rear of the dryer. Make sure you do not damage the pipe thread when removing the cap.
3. Connect to gas supply pipe using a new flexible stainless steel connector.
4. Tighten all connections securely. Turn on gas and check all pipe connections (internal & external) for gas leaks with a non-corrosive leak detection fluid.
5. For L.P. (Liquefied Petroleum) gas connection, refer to section on Gas Requirements.

1 New Stainless Steel Flexible Connector - Use only if allowed by local codes (Use Design A.G.A. Certified Connector)

2 1/8" N.P.T. Pipe Plug  
(for checking inlet gas pressure)

3 Equipment Shut-Off Valve-Installed within 6'  
(1.8 m) of dryer

4 Black Iron Pipe  
Shorter than 20' (6.1 m) - Use 3/8" pipe  
Longer than 20' (6.1 m) - Use 1/2" pipe

5 3/8" N.P.T. Gas Connection

# 4

## DRYER CYCLE PROCESS

Cycle		Default			Conditions of operation and termination

## COMPONENT TESTING INFORMATION

**CAUTION**

When checking the Component, be sure to turn the power off, and do voltage discharge sufficiently.

Component	Test Procedure	Check result	Remark
1. Thermal cut off  • Check Top Marking : N130	Measure resistance of terminal to terminal ① Open at $266 \pm 12^{\circ}\text{F}$ ( $130 \pm 7^{\circ}\text{C}$ ) ② Auto reset $-31^{\circ}\text{F}$ ( $-35^{\circ}\text{C}$ ) Same shape as Outlet Thermostat.	If thermal fuse is open must be replaced ① Resistance value $\approx \infty$ ② Continuity ( $250^{\circ}\text{F}$ ↓) $< 1\Omega$	• Heater case-Safety • Electric type
2. Hi limit Thermostat (Auto reset) 	Measure resistance of terminal to terminal ① Open at $257 \pm 9^{\circ}\text{F}$ ( $125 \pm 5^{\circ}\text{C}$ ) ② Close at $221 \pm 9^{\circ}\text{F}$ ( $105 \pm 5^{\circ}\text{C}$ )	① Resistance value $\approx \infty$ ② Resistance value $< 5\Omega$	• Heater case - Hi limit • Electric type
3. Outlet Thermostat (Auto reset)  • Check Top Marking : N85	Measure resistance of terminal to terminal ① Open at $185 \pm 9^{\circ}\text{F}$ ( $85 \pm 5^{\circ}\text{C}$ ) ② Close at $149 \pm 9^{\circ}\text{F}$ ( $65 \pm 5^{\circ}\text{C}$ ) Same shape as Thermal cut off.	① Resistance value $\approx \infty$ ② Resistance value $< 5\Omega$	• Blow housing - Safety • Electric type
4. Lamp holder 	Measure resistance of terminal to terminal	Resistance value : $80\Omega \sim 100\Omega$	
5. Door switch 	Measure resistance of the following terminal 1) Door switch knob : open ① Terminal : "COM" - "NC" (1-3) ② Terminal : "COM" - "NO" (1-2) 2) Door switch push : push ① Terminal : "COM" - "NC" (1-3) ② Terminal : "COM" - "NO" (1-2)	① Resistance value $< 1\Omega$ ② Resistance value $\approx \infty$ ① Resistance value $\approx \infty$ ② Resistance value $< 1\Omega$	The state that Knob is pressed is opposite to Open condition.
6. Idler switch 	Measure resistance of the following terminal : "COM - NC"	1. lever open ① Resistance value $< 1\Omega$ 2. Lever push (close) ② Resistance value $\approx \infty$	

Component	Test Procedure	Check result	Remark
7. Heater 	Measure resistance of the following terminal ① Terminal : 1 (COM) - 2 ② Terminal : 1 (COM) - 3 ③ Terminal : 2 - 3	① Resistance value : 10Ω ② Resistance value : 10Ω ③ Resistance value : 20Ω	<ul style="list-style-type: none"> <li>• Electric type</li> </ul>
8. Thermistor 	Measure resistance of terminal to terminal Temperature condition : 58°F ~ (10~40°C) 58°F ~ 104F (10~40°C)	Resistance value : 10Ω	<ul style="list-style-type: none"> <li>• Heater case - Hi limit</li> <li>• Electric type</li> </ul>
9. Motor			<ul style="list-style-type: none"> <li>• See Page 13</li> </ul>
10. Gas valve 	Measure resistance of the following terminal ① Valve 1 terminal ② Valve 2 terminal	① Resistance value : > 1.5kΩ ~ ② Resistance value : > 1.5~2.5kΩ	<ul style="list-style-type: none"> <li>• Gas type</li> </ul>
11. Igniter 	Measure resistance of terminal to terminal	Resistance value : 100~800Ω	<ul style="list-style-type: none"> <li>• Gas type</li> </ul>
12. Frame Detect 	Measure resistance of terminal to terminal ① Open at 370°F ((Maximum) ② Close at 320°F	① Resistance value ≒ ∞ ② Resistance value < 1Ω	<ul style="list-style-type: none"> <li>• Gas type</li> </ul>

Component	Test Procedure	Check result	Remark
<p>13. Outlet Thermostat (Auto reset)</p>  <p>• Check Top Marking : N95</p>	<p>Measure resistance of terminal to terminal</p> <p>① Open at <math>203 \pm 7^{\circ}\text{F}</math> (<math>95 \pm 5^{\circ}\text{C}</math>) ② Close at <math>158 \pm 9^{\circ}\text{F}</math> (<math>70 \pm 5^{\circ}\text{C}</math>)</p>	<p>① Resistance value <math>\neq \infty</math> ② Continuity <math>&lt; 1\Omega</math></p>	<ul style="list-style-type: none"> <li>• Gas type</li> <li>• Gas funnel</li> </ul>
<p>13. Outlet Thermostat (Manual reset)</p>  <p>• Check Top Marking : N100</p>	<p>Measure resistance of terminal to terminal</p> <p>① Open at <math>212 \pm 12^{\circ}\text{F}</math> (<math>100 \pm 7^{\circ}\text{C}</math>) ② Manual reset</p>	<p>If thermal fuse is open must be replaced</p> <p>① Resistance value <math>\neq \infty</math> ② Continuity <math>&lt; 1\Omega</math></p>	<ul style="list-style-type: none"> <li>• Gas type</li> <li>• Gas funnel</li> </ul>

Proceed again with the step 1 (by pressing start 1 time), step 2 (by pressing start 2 times), step 3 (by pressing start 3 times) and step 4 (by pressing start 4 times) in sequence.</li> <li>• Press Start 2 times and then open the door. Proceed again from the step 1 all the way to the step 4.</li> <li>• Press Start 3 times and then open the door. Proceed with the step 1 and skip the step 2 and press step 3 twice and finish with step 4 by making sure the all the electric devices shut off in the end.</li> </ul>	

## ■ Test 1 120VAC Electrical supply

<b>Caution</b>	When measuring power, be sure to wear insulated gloves, to and avoid an electric shock.	
<b>Trouble Symptom</b>	No power was applied to Controller. (LED, Display off)	
<b>Measurement Condition</b>	With Dryer Power On; Connector linked to Controller.	
	Check the outlet, is the voltage 110V ~ 125V AC?	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Check the fuse or circuit breaker.</li> </ul>
<b>YES</b>		
	Check if the voltage measured between Connector "RD3-③" (Black) linked to the Controller and "WH3-①" (White) is 110V ~ 125V?	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Check if Power Cord is properly connected.</li> </ul>
<b>YES</b>		
	<p>① Check if the Controller wire is disconnected.</p> <p>② Check if Terminal Block and Power Cord are connected (Check Plug ). - Does Power Cord N( Natural) line match to Terminal Center N(Natural) line?</p>	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Reconnect the controller.</li> </ul>
<b>YES</b>		
	Replace controller.	

## ■ Test 2 Thermistor Test --- Measure with Power Off

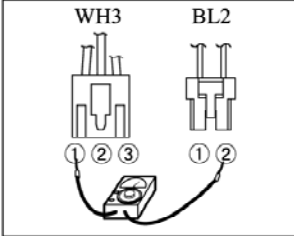

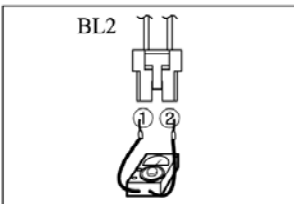

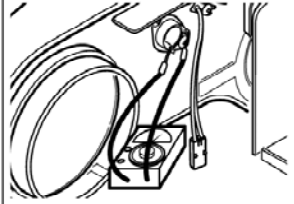

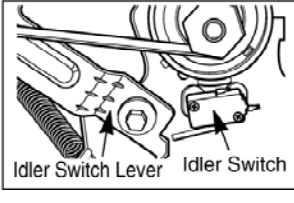

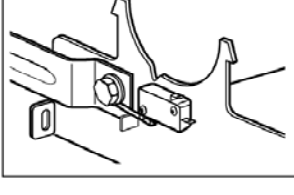

<b>Caution</b>	Before measuring resistance, be sure to turn Power off, and do voltage discharge. (When discharging, contact the metal plug of Power cord with the Ground.)
<b>Trouble Symptom</b>	<ul style="list-style-type: none"> <li>① During Diagnostic Test, tE1 and tE2 Error occur.</li> <li>② During operation, Heater would not turn off, or remains on.</li> <li>③ Difference between actual and sensed temperature is significant.</li> </ul>
<b>Measurement Condition</b>	After turning Power off, measure the resistance.

■ Table 1. Resistance for Thermistor Temperature.

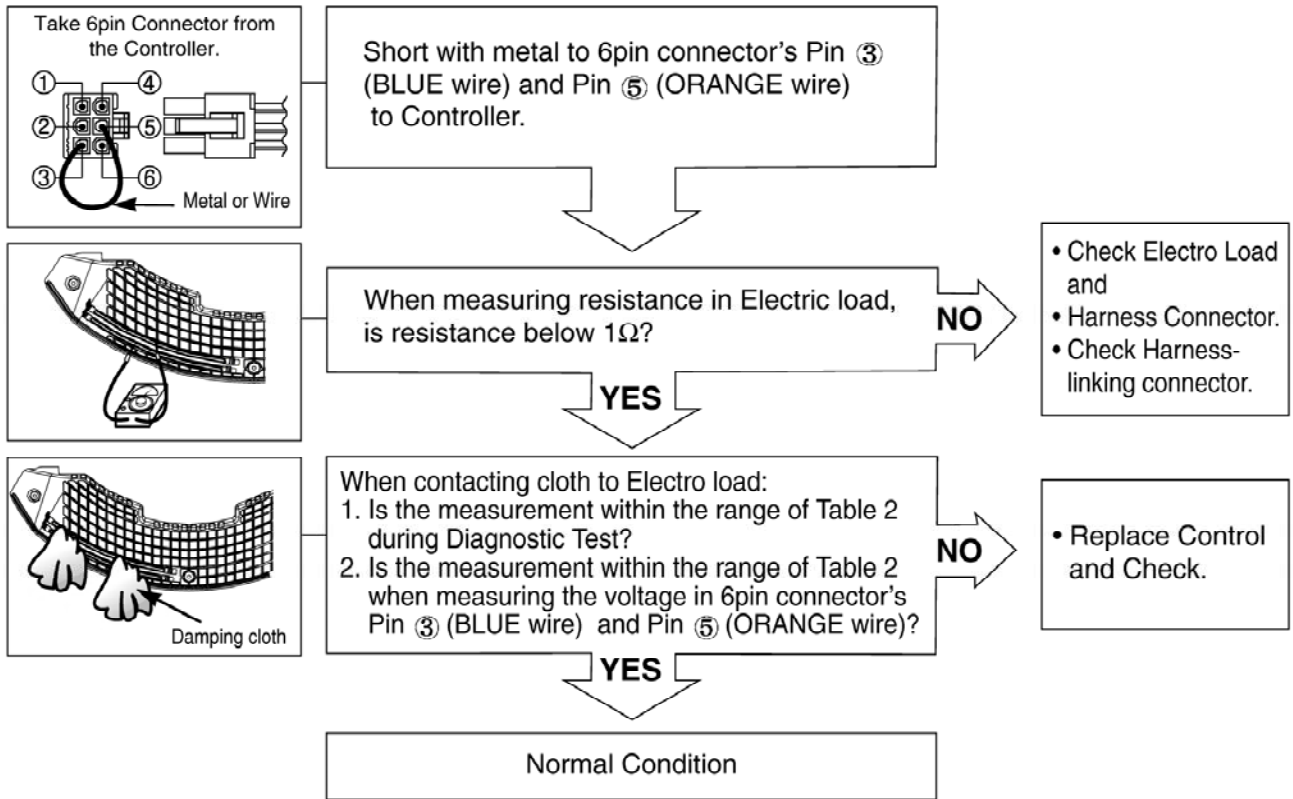

Air TEMP.[°F (°C)]	RES. [kΩ]	Air TEMP.[°F (°C)]	RES. [kΩ]	Air TEMP.[°F (°C)]	RES. [kΩ]
50°F (10°C)	18.0	90°F (32°C)	7.7	130°F (54°C)	2.9
60°F (16°C)	14.2	100°F (38°C)	6.2	140°F (60°C)	3.0
70°F (21°C)	11.7	110°F (43°C)	5.2	150°F (66°C)	2.5
80°F (27°C)	9.3	120°F (49°C)	4.3	160°F (71°C)	2.2

## ■ Test 3 Motor test

<b>Caution</b>	Before measuring resistance, be sure to turn Power off, and do voltage discharge. (When discharging, contact the metal plug of Power cord with earth line.)	
<b>Trouble Symptom</b>	Drum will not rotate; No fan will function; No Heater will work.	
<b>Measurement Condition</b>	Turn the Dryer's Power Off, then measure resistance.	
	<p>Is resistance below <math>3\Omega</math> between Connector "WH3-①" (White wire) and "BL2-②" (Brown wire)? ※ Measure while door is closed.</p> <p><b>YES</b></p> <p><b>NO</b></p>	<ul style="list-style-type: none"> <li>• Replace Control. (Relay check)</li> <li>• Check Controller connector.</li> </ul>
	<p>Is resistance below <math>3\Omega</math> between Connector "WH3-①" (White wire) and "BL2-①" (Yellow wire)? ※ Measure while door is closed.</p> <p><b>NO</b></p> <p><b>YES</b></p>	<ul style="list-style-type: none"> <li>• Check if Door flame presses door switch knob.</li> <li>• Check Door Switch.</li> <li>• Check Harness connection.</li> </ul>
	<p>Is resistance below <math>3\Omega</math> between Connector "BL2-①" (Yellow wire) and "BL2-②" (Brown wire)?</p> <p><b>YES</b></p> <p><b>NO</b></p>	<ul style="list-style-type: none"> <li>• Replace Control. (Relay check)</li> <li>• Check Controller connector.</li> </ul>
	<p>Is resistance below <math>1\Omega</math> between terminals of Outlet Thermostat attached to blower housing?</p> <p><b>NO</b></p> <p><b>YES</b></p>	<ul style="list-style-type: none"> <li>• Replace Outlet Thermostat. (Refer to 'Component')</li> </ul>
	<p>Does Idle Switch attached to Motor Bracket operate Level by drum belt? (Not operating Lever is normal.)</p> <p><b>YES</b></p>	<ul style="list-style-type: none"> <li>• Check Idler Assembly.</li> <li>• Drum Belt cuts off</li> <li>• Drum Belt takes off from Motor Pulley.</li> </ul>
	<p>Is resistance below <math>1\Omega</math> between Idler Switch terminals?</p> <p><b>NO</b></p> <p><b>YES</b></p>	<ul style="list-style-type: none"> <li>• Replace Idler Switch.</li> </ul>
	<ul style="list-style-type: none"> <li>• Check Motor. (Refer to 'Motor Diagram &amp; Check')</li> <li>• Check if Control Connector is contacted.</li> </ul>	

## ■ Test 4 Moisture sensor

<b>Caution</b>	Before measuring resistance, be sure to turn Power off, and do voltage discharge. (When discharging, contact the metal plug of Power cord with earth line.)
<b>Trouble Symptom</b>	Degree of dryness does not match with Dry Level.
<b>Measurement Condition</b>	Turn the Dryer's Power Off, then measure resistance.

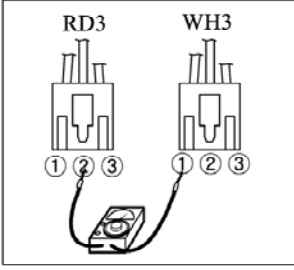

■ Table 2. IMC Ratio and Display Value / Voltage (IMC : Initial Moisture Content)

IMC	Display Value	Voltage(DC) (between 6Pin terminal ③,⑤)	Remark
70% ~ 40%	50 ~ 130	2.5V	Weight after removing from Washing Machine
40% ~ 20%	100 ~ 20	2.0V ~ 4.0V	Damp Dry
10% ~ Dried clothes	205 ~ 240	Over 4.0V	Completely-dried clothes

## ■ Test 5 Door switch test

<b>Caution</b>	Before measuring resistance, be sure to turn Power off, and do voltage discharge. (When discharging, contact the metal plug of Power cord with earth line.)
<b>Trouble Symptom</b>	Door Opening is not sensed. (During operation, when opening Door, Drum motor and Heater run continuously; Door Close is not sensed. (Drum motor will not operate. Display will flash at 0.5 second intervals.)
<b>Measurement Condition</b>	After turning Dryer Power Off, measure resistance.

Measure while Door is closed. Check if resistance is below 250Ω between “WH3-①” (White wire) and “RD3-②” (Black wire) Connector WH3, RD3 after taking WH3, RD3 out from Controller.

**YES** →

**NO** ↓

- Door switch Check (Refer to Component testing.)

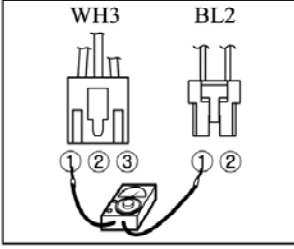

Measure while Door is open. Check if resistance is 300~60Ω between “WH3-①” (White wire) and “RD3-②” (Black wire) Connector WH3, RD3 after taking WH3, RD3 out from Controller.

**NO** →

**YES** ↓

- Check Lamp. (When opening Lamp, replace then measure again.)
- Door switch Check (Refer to Component testing.)

Measure while Door is open. Check if resistance is below 1Ω between “BL2-①” (Yellow wire) and “WH3-①” (White wire) after taking Connector WH3, BL2 out from Controller.

**YES** →

**NO** ↓

- Door switch Check (Refer to Component testing.)

Measure while Door is closed. Check if resistance is below 1Ω between “BL2-①” (Yellow wire) and “WH3-①” (White wire) after taking Connector WH3, BL2 out from Controller.

**NO** →

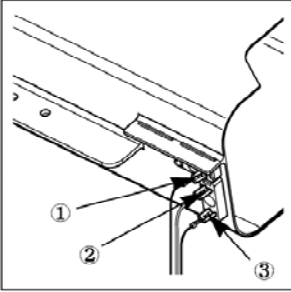

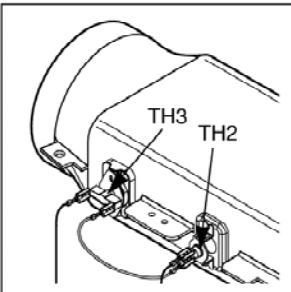

**YES** ↓

- Door switch Check (Refer to Component testing.)

  

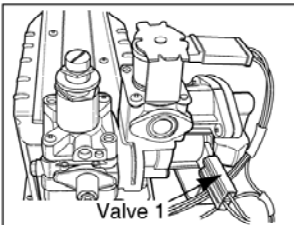

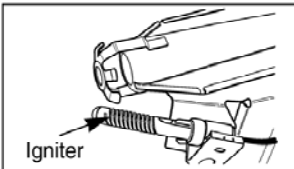

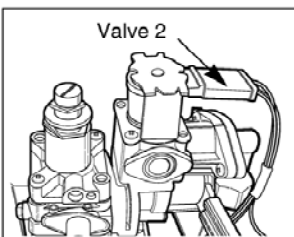

Check Controller.  
Check Harness-linking connector.

## ■ Test 6 Heater switch test - Electric Type

<b>Caution</b>	Before measuring resistance, be sure to turn Power off, and do voltage discharge. (When discharging, contact the metal plug of Power cord with earth line.)	
<b>Trouble Symptom</b>	While operating, Heating will not work. Drying time takes longer.	
<b>Measurement Condition</b>	After turning Power off, measure the resistance.	
	<ol style="list-style-type: none"> <li>1. Is resistance between Heater terminal ① and ② below 18 ~ 22Ω?</li> <li>2. Is resistance between Heater terminal ① and ③ below 18 ~ 22Ω?</li> <li>3. Is resistance between Heater terminal ② and ③ below 9 ~ 11Ω?</li> </ol>	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Replace Heater.</li> </ul>
	<b>YES</b>	
	Check if the value of measured resistance is below 1Ω between terminal TH2 (Safety Thermostat).	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Replace TH2 (Safety Thermostat).</li> </ul>
	<b>YES</b>	
	Check if the value of measured resistance is below 1Ω between terminal TH3 (HI-Limit Thermostat).	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Replace TH3 (HI-Limit Thermostat).</li> </ul>
	<b>YES</b>	
	Check Motor. Check if the value of measured resistance is below 1Ω between terminal ① and ⑩ at RUN condition.	<p><b>NO</b></p> <ul style="list-style-type: none"> <li>• Check Motor and replace it.</li> </ul>
	<b>YES</b>	
	Check Controller. Check Harness-linking Connector.	

## ■ Test 7 GAS Valve test - Gas Type

<b>Caution</b>	When measuring power, be sure to wear insulated gloves, to avoid electric shock.
<b>Trouble Symptom</b>	While operating, Heating will not work. Drying time takes longer.
<b>Measurement Condition</b>	With dryer power on
<div style="display: flex; align-items: flex-start;"> <div style="flex: 1;">    </div> <div style="flex: 3;"> <pre> graph TD     Start[Power On &amp; Start (Normal Cycle)] -- NO --&gt; Q1{When measuring Valve 1 voltage, More than AC 90V?}     Q1 -- NO --&gt; A1[• Check thermostat Hi limit Safety]     Q1 -- YES --&gt; Q2{Igniter operates? (after 1 min, Igniter becomes reddish)}     Q2 -- NO --&gt; A2[• Check Igniter &amp; Frame detect]     Q2 -- YES --&gt; Q3{When measuring Valve 2 voltage, Value is more than AC 90V? (10 sec after Igniter off)}     Q3 -- YES --&gt; A3[• Check Gas connection or Gas supply]     Q3 -- NO --&gt; Q4{When measuring terminal resistance on "Valve 1", "Valve 2", Value is more than 1.5 ~ 2.5kΩ? (Measure after Off)}     Q4 -- YES --&gt; A4[• Change Valve]     Q4 -- NO --&gt; A5[• Harness check • Controller change]                     </pre> </div> </div>	

# 10

# CHANGE GAS SETTING (NATURAL GAS, PROPANE GAS)

## Warning

After Natural Gas Setting, applying Propane Gas Orifice or wrong use of Natural Gas Orifice will result in fire. Conversion must be made by a qualified technician.

Initially, Natural Gas mode is set. Propane Gas Orifice is on sale as a Service Part to authorized servicers only.

### STEP 1 : VALVE SETTING

### STEP 2 : ORIFICE CHANGE

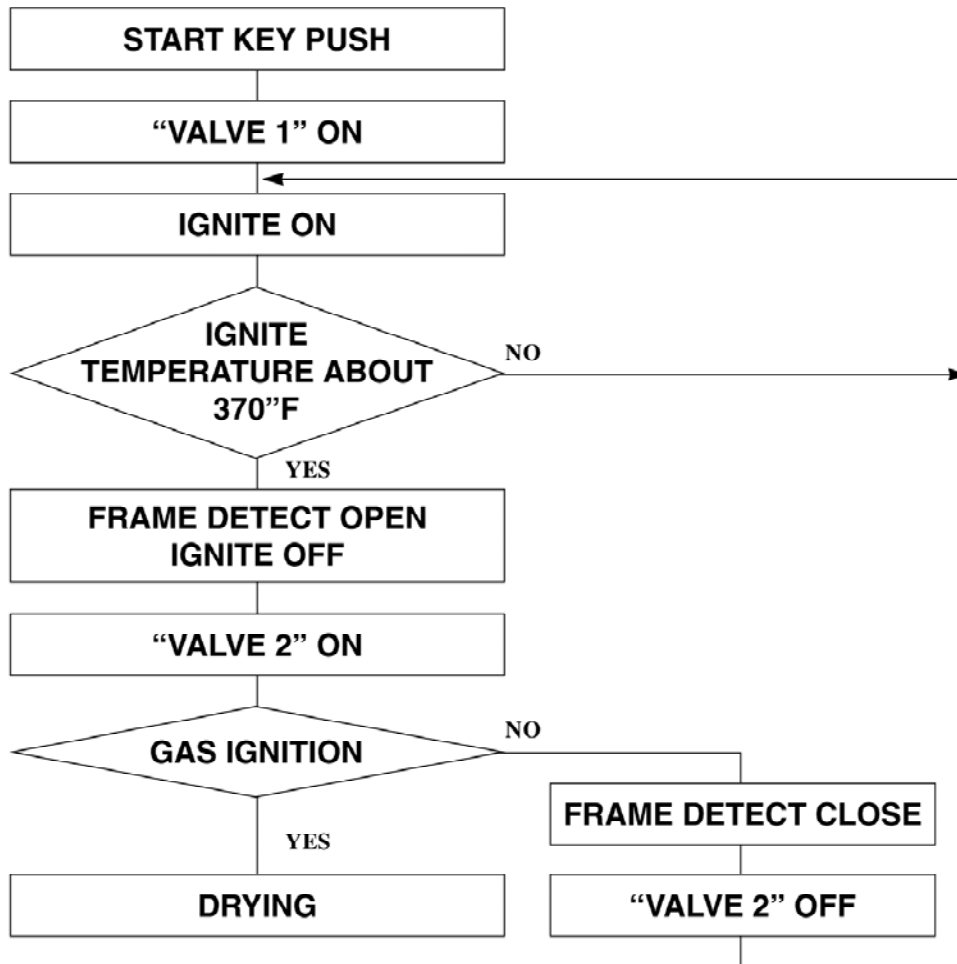

- ① Remove 2 screws.
- ② Disassemble the pipe assembly.
- ③ Replace Natural Gas orifice with Propane Gas orifice.

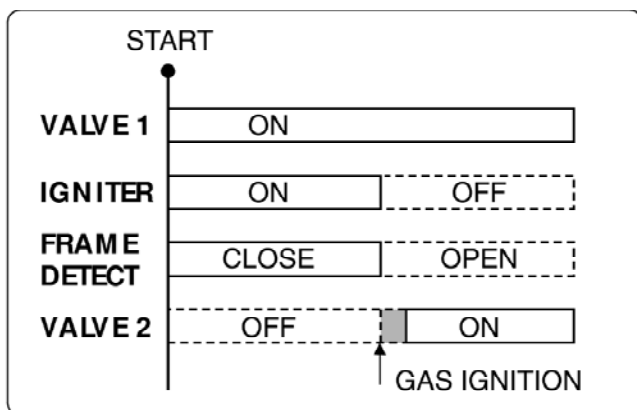

Gas type	Orifice P/No	Marking	Shape
Natural Gas	4948EL4001B	NCU	
Propane Gas	4948EL4002B	PCU	

※ **Kit contents** : Orifice (Dia. = 1.613mm, for Propane Gas)  
: Replace Label  
: Instruction sheet

## ■ GAS VALVE FLOW

### GAS IGNITION

### GAS VALVE STRUCTURE

# 11

## DISASSEMBLY INSTRUCTIONS

\* Disassemble and repair the unit only after pulling out power plug from the outlet.

### TOP PLATE

1. Remove 3 screws on the upper plate.

2. Push the top plate back ward.

3. Lift the top plate

## CONTROL PANEL ASSEMBLY

1. Remove 2 screws on the control panel frame.

2. Disconnect the connectors.

3. Pull the control panel assembly upward and then forward.

4. Remove 9 screws on the PWB(PCB) assembly, display.
5. Remove 4 screws on the PWB(PCB) assembly, main.
6. Disassemble the control panel assembly.

## COVER CABINET

1. Disassemble the top plate.
2. Disassemble the control panel assembly.
3. Disassemble the door assembly.
4. Remove 2 screws.

5. Remove 4 screws from the top of cabinet cover.
6. Disconnect the harness of door switch.

## TUB DRUM [FRONT]

1. Disassemble the top plate.
2. Remove Cover Cabinet.
3. Disconnect the door lamp and electrode sensor connector.
4. Remove 4 screws.
5. Disassemble the Tub Drum [Front].

## DRUM ASSEMBLY

1. Disassemble the top plate.
2. Remove the Cabinet Cover and Tub drum [front].
3. Loosen belt from motor and idler pulleys.
4. Carefully remove Drum out.

## CHANGING THE DRUM LAMP

1. Disassemble the door.
2. Remove a screw by holding the drum lamp shield in place.
3. Slide the shield up and remove.
4. Remove the bulb and replace with a 15 watt, 120 volt candelabra-base bulb.
5. Replace the lamp shield and screw.

## DRYER EXHAUST CHANGE

**1.** Remove a screw and exhaust duct.

**2-1.** Detach and remove a knockout at the bottom, left or right side as desired. (Right Side Vent not available on Gas dryer)  
①, ②, ③ the order of work.

**2-2.** Reconnect the another duct[11 in(28cm)] to the blower housing, and attach the duct to the base. ( Duct is a SVC part)

**3-1.** Pre-assemble 4" elbow with 4" duct.  
Wrap duct tape around joint.

**3-2.** Insert elbow duct assembly first through the side opening and connect the elbow to the internal duct.

## FILTER ASSEMBLY

1. Remove the filter.
2. Remove 3 screws.
3. Remove Cover Grille.
4. Disconnect electrode sensor.

## BLOWER HOUSING

1. Disassembly the top plate.
2. Remove the Cabinet Cover and Tub Drum [Front].
3. Remove the Drum assembly.
4. Remove 2 screws and cover(Air guide).
5. Remove the bolt and washer.
6. Remove the fan.
7. Disconnect the motor clamp and motor.

## BACK COVER

1. Disassemble the top plate.
2. Remove the Cabinet Cover and Tub Drum [Front].
3. Remove the Drum assembly.
4. Remove 7 screws.
5. Remove the Tub Drum [Rear] towards the front.

## AIR DUCT

1. Disassemble the top plate.
2. Remove the Cover Cabinet.
3. Remove filter and 2 screws.
4. Remove the air duct.

## ROLLERS

1. Disassemble the top plate.
2. Remove the Cover Cabinet and Tub Drum [Front].
3. Remove the Drum assembly and Tub Drum [Rear].
4. Disconnect Air duct from the Tub Drum [Front].
5. Remove the roller from the Tub Drum [Front] and Tub Drum [Rear].
