**FOR**

**PIZZA OVEN AND MICROWAVE OVEN**

**MODEL 721.66993800**

**December, 2007**

# **CAUTION**

## **WARNING TO SERVICE TECHNICIANS**

### **PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY**

- a. Do not operate or allow the oven to be operated with the door open.**
  - b. Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs as necessary; (1) Interlock operation, (2) proper door closing, (3) seal and sealing surfaces (arcing, wear, and other damage), (4) damage to or loosening of hinges and latches, (5) evidence of dropping or abuse.**
  - c. Before turning on microwave for any service test or inspection within the microwave generating compartments, check the magnetron, wave guide or transmission line, and cavity for proper alignment, integrity, and connections.**
  - d. Any defective or misadjusted components in the interlock, monitor, door seal, and microwave generation and transmission systems shall be repaired adjusted by procedures described in this manual before the oven is released to the owner.**
  - e. A Microwave leakage check to verify compliance with the Federal performance standard should be performed on each oven prior to release to the owner.**
- Proper operation of the microwave ovens requires that the magnetron be assembled to the wave guide and cavity. Never operate the magnetron unless it is properly installed.
  - Be sure that the magnetron gasket is properly installed around the dome of the tube whenever installing the magnetron.
  - Routine service safety procedures should be exercised at all times.
  - Untrained personnel should not attempt service without a thorough review of the test procedures and safety information contained in this manual.

# FOREWORD

Read this Manual carefully. Failure to adhere to or observe the information in this Manual may result in exposing yourself to the Microwave Energy normally contained within the oven cavity.

## MODEL 721.66993

B. Checkout Procedures .....	28-30
C. Troubleshooting .....	31-36
12. Exploded View .....	37-44

## 1. ADJUSTMENT PROCEDURES

To avoid possible exposure to microwave energy leakage, adjust the door latches and interlock switches, using the following procedure.

### **ONLY AUTHORIZED SERVICE PERSONNEL SHOULD MAKE THIS ADJUSTMENT.**

The Interlock Monitor and Primary Interlock Switch acts as the final safety switch protecting the user from microwave energy. The terminals between "COM" and "NC" of the Interlock Monitor must close when the door is opened. After adjusting the Interlock Monitor Switch, make sure that it is correctly connected. See Figures 1-a and 1-b throughout this procedure.

### **CHECK THE DOOR LATCH AND SWITCH CLOSING.**

**NOTE:** The outer cover of the microwave oven is removed.

- (1) Set the microwave oven on its side so that you can see the latch board and the switches, as shown in Figure 1-a.
- (2) Close the door tightly and check gaps A and B to be sure they are no more than 1/64" (0.5 mm). See Figure 1-b for close-up view of gaps A and B (door latches). If all gaps are less than 1/64" (0.5 mm), adjustment of the latch board may not be necessary. Go to Steps 5 and 6 to check the sequence of the switches.

**NOTE:** To correct sequence of the Primary Interlock Switch, Secondary Interlock Switch and the Interlock Monitor Switch is very important.

If any gap is larger than 1/64" (0.5 mm), you will need to adjust the latch board-U, L. Go to step 3 and follow all steps in order.

### **ADJUST THE LATCH AND SWITCH CLOSING**

- (3) Loosen the two screws holding the plastic latch board as shown.
- (4) With the oven door closed tightly, move the latch board upward toward the top of the oven and/or away from the door latch until the gaps are less than 1/64" (0.5 mm).

Hold the latch board tightly in this position until you check the sequence of the switches in steps 5 and 6.

### **TEST THE LATCH AND SWITCH SEQUENCE**

- (5) Open the oven door slowly. Watch the door latch, the Primary Switch. Release Rod and Lever on the switches to make sure they are zero to the body of the switches in the following sequence:

- Primary Interlock Switch
- Secondary Interlock Switch
- Interlock Monitor Switch

Adjust the latch board until the switches operate in this sequence. See Steps 3 and 4.

- (6) Close the oven door slowly and be sure it is tightly closed. Watch the three switches to make sure they are zero to the body of the switches in the following sequence:

- Interlock Monitor Switch
- Primary Interlock Switch
- Secondary Interlock Switch

**NOTE:** The Interlock Monitor Switch is an added safety check on the Primary and Secondary Interlock Switches. If the Primary and Secondary Interlock Switches allow the oven to operate with the door open, the Monitor Switch will blow the fuse.

- (7) When you achieve the proper sequence of switches in Steps 5 and 6, tighten the latch board screws at that point.

### **TEST THE MICROWAVE ENERGY LEAKAGE**

- (8) Using a survey meter, make sure the microwave energy is below 5 mW/cm.sq.

Figure 1-a

Figure 1-b

## 2. PRECAUTIONS ON INSTALLATION

(Figure 2)

- A. Plug the power supply cord into a 120 V AC, 60 Hz, single-phase power source with a capacity of at least 20 amperes.
- B. Since the unit weights about 34 lbs, be sure to place it on a sturdy and flat surface.
- C. Avoid placing the unit in a location where there is direct heat or splashing water.
- D. Place the unit as far away as possible from TV, radio, etc. to prevent interference. And do not place on or near a hot gas or electric burner or in a heated oven.

### CAUTION

This unit is equipped with a 3-prong plug for your safety. If the wall outlet is a grounded 3-hole type, the unit will be grounded automatically.

**Properly Polarized and Grounded Outlet**

**Three-Pronged(Grounding) Plug**

**Figure 2**

## 3. GENERAL PRECAUTIONS IN USE

### Microwave Oven

- A. Never operate the unit when it is empty. Operating the oven with no load may shorten the life of the magnetron. Whenever cooking dry foods (dried fish, bread, etc.) or a small amount of food, be sure to put a glass of water into the cooking compartment. The turntable tray may become hot after operating, be careful when touching it.
- B. Aluminum foil should be avoided because it will disrupt cooking and may cause arcing. However, small pieces may be used to cover some parts of food to slow the cooking. Any aluminum foil used should never be closer than 2.5 cm to any side wall of the oven.

### Pizza Oven

- A. Never operate the oven when it is empty. Operating the oven with no load may overheat this appliance.
- B. Oversized food, metal foil packages or utensils must not be inserted in this oven, as they may create a fire or electrical hazards.

## 4. TRIAL OPERATION

After installation, the following sequences and results should be checked carefully.

### Microwave Oven

- A. Put a container filled with water (about 1 liter) into the oven, and close the door tightly.
- B. Touch the STOP/CLEAR and the COOK TIME keys.
- C. Set cooking time for 10 minutes by touching “1” and then “0” three times. “10:00” appears in the display window.
- D. Touch the START key.  
Make sure the cavity light comes on. The unit will begin cooking and the display window will show the time counting down by seconds.
- E. After about 5 minutes, make sure the primary interlock switch, the secondary interlock switch and the interlock monitor and oven lamp switch operate properly by opening and closing the door several times. Touch the START key each time the door is closed.
- F. Continue operating the unit. Four long beep sound signal is heard when the time is up. The unit will shut off automatically.
- G. Confirm the water is hot.
- H. Finally, measure the output power according to “POWER OUTPUT MEASUREMENT” on page 14.

### Pizza Oven

- A. Remove all protective wrappings from food before placing into metal tray. Metal tray with pizza place on the shelf and close the door.
- B. Select one mode(Auto Pizza/Bake).  
Touch this pad to select programing food items.
  - a) In case of auto pizza touch this pad to select programing food items.
  - b) In case fo bake touch this pad to select sat a tem perature and cooking times.
- C. The cooling fan turns on during the cooking.  
Beep sound signal is heard when the time is up.  
The unit will shut off automatically and fan will blow.  
If oven temperature is above 325°F

**NOTE :** If you operate this pizza for the first time, you will notice an odor, that is a characteristic of burning off residues on the new heating elements. This is normal.

## 5. FEATURES AND SPECIFICATIONS

### Microwave Oven

- A. The safety systems incorporated in this oven are:
- (1) Primary interlock switch
  - (2) Secondary interlock switch
  - (3) Interlock monitor switch
  - (4) Choke system
  - (5) Magnetron thermostat
  - (6) Oven cavity thermostat
- (Note: This thermostat located on the oven cavity will open and stop the unit from operation only if a high temperature is reached, such as, a fire created by overcooking food.)
- B. Any one of 10 power output levels ranging 100W to 900W can be selected by the touch control and electronic computer system.
- C. Cooking time can be displayed on the digital readout. And MWO mode and Pizza oven mode can be displayed to avoid confusion.
- D. Three different cooking stages can be set. The oven remembers three cooking stages and changes from one cooking stage to another. This is made possible with the memory function of the microprocessor.

### Pizza Oven

- A. The safety systems incorporated in this pizza oven are:
- (1) Door switch
  - (2) Thermostat
- (Note : This thermostat located on the oven side will open and stop the unit from operation only if a high temperature is reached, such as, a fire created by overcooking food.)
- B. Cooking mode auto pizza and bake and browning level can be displayed on the digital readout.
- C. Thermister controls the cooking time by detecting the internal temperature. This makes it possible to cook pizza evenly.

## SPECIFICATIONS

Rated Power Consumption .....	1450W
Output	
Microwave oven .....	1000W (*IEC60705 Rating standard) Adjustable 100W through 1200W,10 steps
Pizza oven .....	1400W
Frequency .....	2450 MHz $\pm$ 50 MHz
Power Supply.....	120V $\pm$ 12V AC, 60Hz
Rated Current .....	12.5 Amp.
Magnetron & Heater Cooling .....	Forced Air Cooling
Microwave Stirring .....	Turntable
Rectification .....	Rectification Voltage Doubler Half-Wave
Door Sealing .....	Choke System
Safety Devices	
Microwave oven .....	Thermostat: Open at 90°C $\pm$ 5°C, Close at 75°C $\pm$ 5°C Fuse(20A) Primary Interlock Switch Secondary Interlock Switch Interlock Monitor
Pizza oven .....	Pizza Oven Door Switch Thermostat: Open at 145°C $\pm$ 5°C, Close at 0°C $\pm$ 5°C
Magnetron .....	2M246
High Voltage Capacitor .....	Capacitor: 0.91 $\mu$ F, 2.1KV Ac
High Voltage Diode .....	350mA, 9.0KV
Cavity Lamp .....	125V, 20W
Timer .....	Digital, up to 99 mm. 99 sec. (in each cooking stage)
Tray .....	Tempered Safety Glass
Thermistor, NTC .....	150°C $\pm$ 3%
Overall Dimensions .....	23 <sup>3</sup> / <sub>4</sub> "(W) x 17 <sup>7</sup> / <sub>16</sub> "(H) x 19 <sup>1</sup> / <sub>4</sub> "(D)
Oven Cavity Size .....	19 <sup>15</sup> / <sub>16</sub> "(W) x 15 <sup>1</sup> / <sub>2</sub> "(H) x 17 <sup>1</sup> / <sub>4</sub> "(D)
Effective Capacity of Oven Cavity .....	1.1 Cu.ft.
Accessories .....	Use and Care Manual ,Glass Turntable, Turntable Rotating Ring, Shelf, Metal Tray

## SWITCH CHART

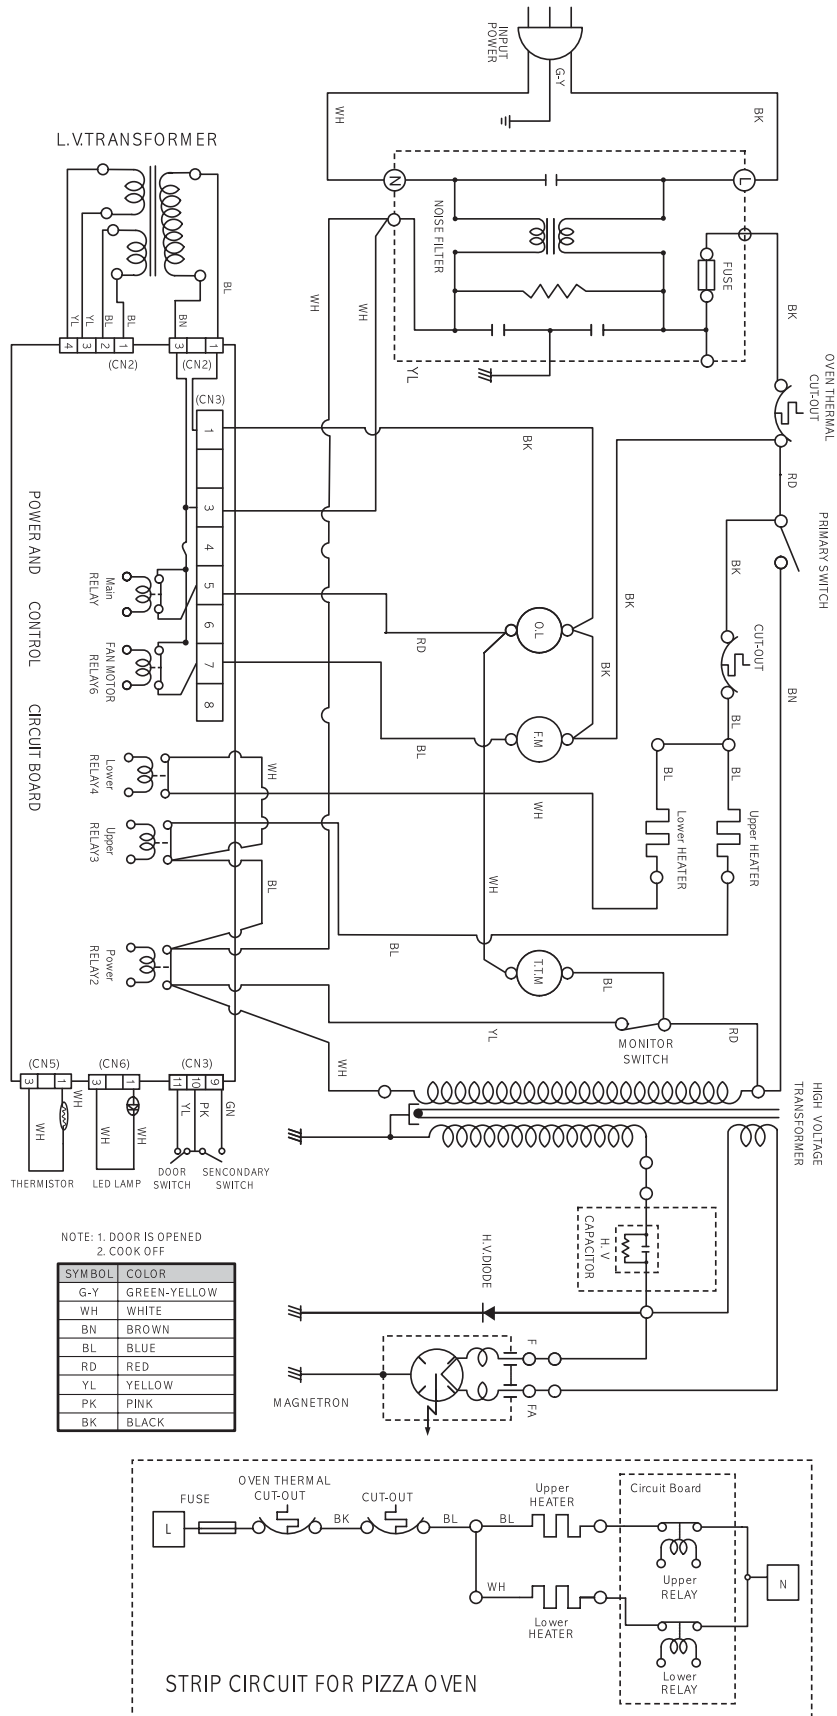

SWITCH MODE	PRIMARY INTERLOCK SWITCH	SECONDARY INTERLOCK SWITCH	INTERLOCK MONITOR SWITCH	PIZZA OVEN DOOR SWITCH
CONDITIONS	COM NO	COM NO	COM NC	COM NO
DOOR OPEN	$\infty$	$\infty$	0	$\infty$
DOOR CLOSED	0	0	$\infty$	0

**NOTE:** Use the above switch table with circuit diagram on page 8.

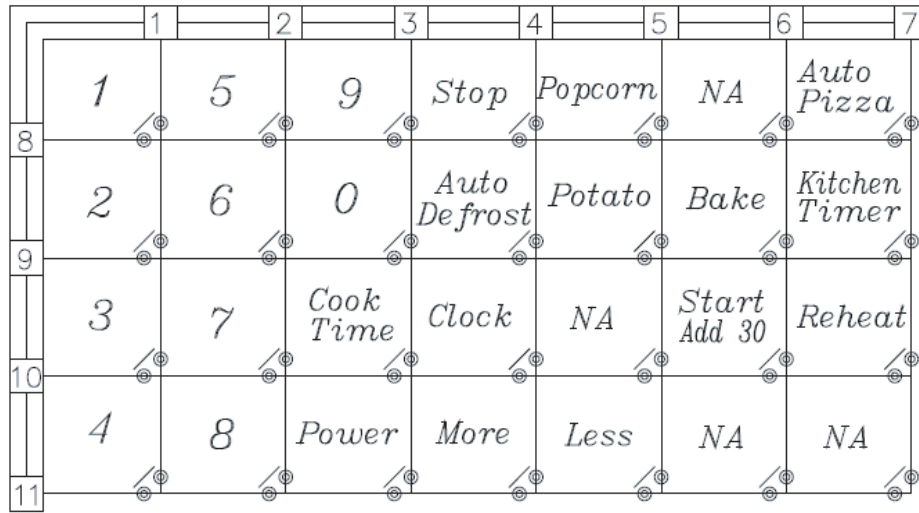

# 6. OVERALL CIRCUIT DIAGRAM

## A. SCHEMATIC DIAGRAM

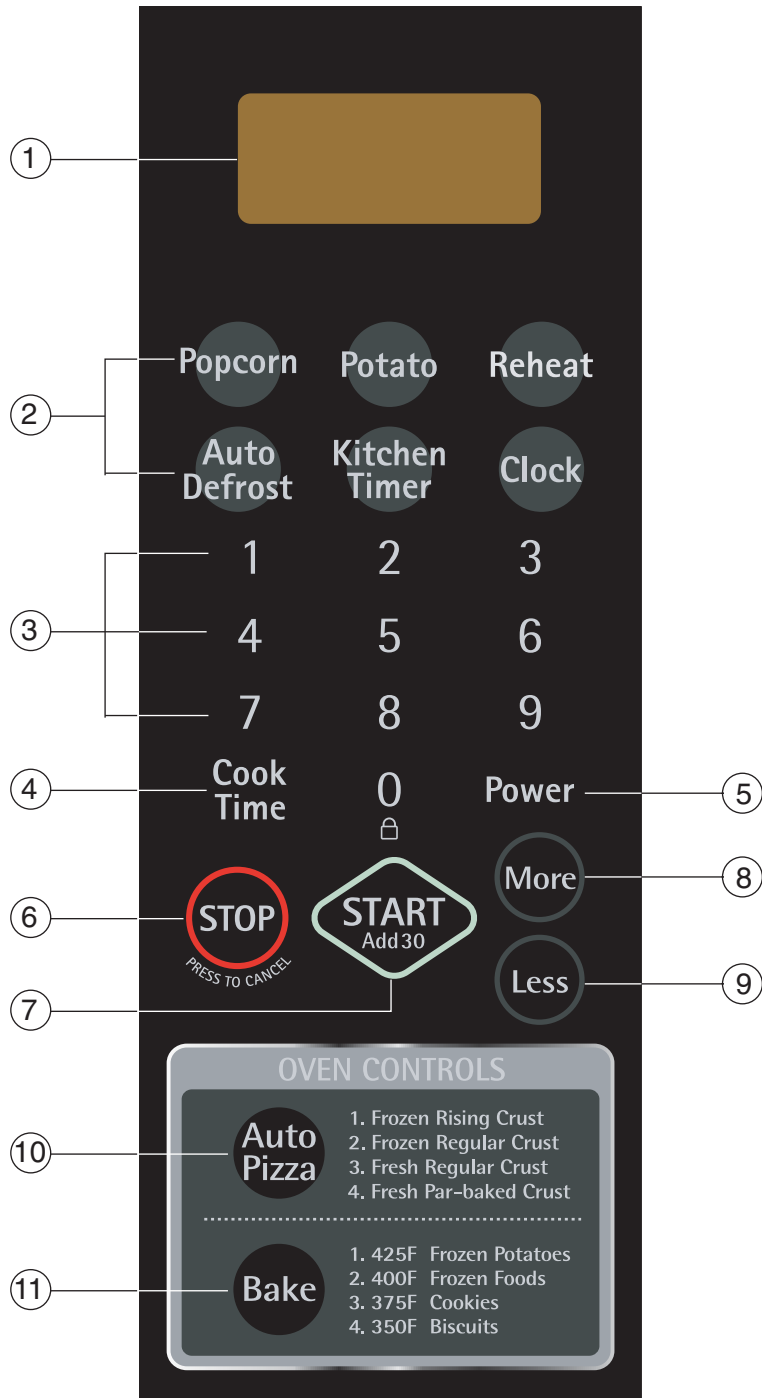

**B. MATRIX CIRCUIT FOR TOUCH KEY BOARD**

**Figure 4**

**7. OPERATING PROCEDURES**  
**A. OVEN CONTROL PANEL**

**NOTE:** A "beep" sounds when you touch a "key" on the control panel, to indicate that you have entered a setting.

## B. PANEL INSTRUCTIONS

The entire operation is done by simple touch control pads.

- 1. DISPLAY.** The Display includes a clock and indicators that tell you time of day, cooking time settings, and cooking functions selected.
- 2. QUICK TOUCH COOKING.** These pads allow you to cook most of your favorite foods without having to select cooking times and power levels.
- 3. NUMBER PADS.** Touch Number Pads to enter cooking time, power level, quantities, or weights.
- 4. COOK TIME.** Touch this pad to set a cooking time.
- 5. POWER.** Touch this pad to set a cooking power.
- 6. STOP.** Touch this pad to stop the oven or clear entries.
- 7. START.** Touch this pad to start all entries (except the Quick Touch Sensor, Express Defrost, Auto Cook and Add Minute function which start automatically).
- 8. MORE.** Touch this pad to add 10 seconds of cook time each time you press it.
- 9. LESS.** Touch this pad to subtract 10 seconds of cook time each time you press it.
- 10. AUTO PIZZA.** Touch This Pad to select Programming Food Items.
- 11. BAKE.** Touch This Pad to select sat a Temperature and cooking times.

## **C. EASY USE TABLE MICROWAVE OVEN**

### **(1) KITCHEN TIMER**

1. Touch STOP.
2. Touch KITCHEN TIMER.
3. Touch correct number for time.
4. Touch START.

### **(2) CHILD LOCK**

To set:

1. Touch STOP.
2. Touch "START" more than 4 seconds.

To cancel:

1. Touch STOP.
2. Touch "START" more than 4 seconds.

### **(3) AUTO COOK**

1. Touch STOP.
2. Touch AUTO COOK Category.
3. Touch START.  
(Although you don't touch start, it will start after 4 seconds automatically)

### **(4) QUICK TOUCH PLUS**

1. Touch STOP.
2. Touch QUICK TOUCH PLUS.

### **(5) AUTO DEFROST**

1. Touch STOP.
2. Touch AUTO DEFROST.  
Three different defrosting levels are provided.  
(Touch 1 : Meat  
Touch 2 : Poultry  
Touch 3 : Fish)
3. Enter the weight of your food in decimal increments from 0.1 to 6.0 pounds.
4. Touch START
5. At beeping, turn food over.
6. After turning food over, touch START to resume defrosting.

### **(6) TIMED COOKING**

1. Touch STOP.
2. Touch COOK TIME.
3. Touch number for cooking time.
4. Touch POWER.
5. Touch number for cooking power level.
6. Touch START.

### **(7) MULTI-STAGE COOKING**

1. Touch STOP.
2. Touch COOK TIME.
3. Touch number for cooking time.
4. Touch POWER.
5. Touch number for cooking power level.
6. Repeat steps 2-5 to set 2nd cooking stage.
7. Touch START.

## **PIZZA OVEN**

### **(1) AUTO PIZZA**

1. Touch STOP.
2. Touch AUTO PIZZA.  
Four different defrosting levels are provided  
(Touch 1 : Frozen Rising Crust  
Touch 1 : Frozen Regular Crust  
Touch 1 : Fresh Regular Crust  
Touch 1 : Fresh par-baked Crust )
3. Touch START.

### **(2) BAKE**

1. Touch STOP.
2. Touch BAKE.  
Four different defrosting levels are provided  
(Touch 1 : 425 F  
Touch 1 : 400 F  
Touch 1 : 375 F  
Touch 1 : 350 F ).
3. Touch number for cooking time.
4. Touch START.

## 8. PROCEDURE FOR MEASURING MICROWAVE ENERGY LEAKAGE

### A. CAUTIONS

- (1) Be sure to check a microwave emission prior to servicing the oven if the oven is operative prior to servicing.
  - (2) The service personnel should inform the manufacturer, importer, or assembler of any certified oven unit found to have a microwave emission level in excess of 5mW/cm.sq. and should repair any unit found to have excessive emission levels at no cost to the owner and should ascertain the cause of the excessive leakage. The service personnel should instruct the owner not to use the unit until the oven has been brought into compliance.
  - (3) If the oven operates with the door open, the service personnel should;
    - Tell the user not to operate the oven
    - Contact the manufacturer and CDRH (Center for Devices and Radiological Health) immediately.

**NOTE:** Address on CDRH  
Office of Compliance (HFZ-312)  
Center for Devices and Radiological Health  
1390 Piccard Drive  
Rockville, Maryland 20850
  - (4) The service personnel should check all surface and vent openings for microwave emission testing.
  - (5) Check for microwave energy leakage after every servicing. The power density of the microwave radiation leakage emitted by the microwave oven should not exceed 1mW/cm.sq. And always start measuring of an unknown field to assure safety for operating personnel from radiation leakage.
- NOTE:** The standard is 5mW/cm.sq. while in the customer's home. 1mW/cm.sq. stated here is manufacturer's own voluntary standard for units in customer's home.

### EQUIPMENT

- Electromagnetic energy leakage monitor (NARDA 8100B, HOLADAY HI 1501)
- 600cc glass beaker
- Glass thermometer 100°C

### B. MEASURING MICROWAVE ENERGY LEAKAGE

- (1) Pour 275±15cc of 20±5°C water in a beaker which is graduated to 600 cc, and place the beaker in the center of the oven.
- (2) Set the energy leakage monitor to 2450 MHz and use it following the manufacturer's recommended test procedure to assure correct result.
- (3) When measuring the leakage, always use the 2 inch (5cm) spacer supplied with the probe.
- (4) Operate the oven at its maximum output.
- (5) Measure the microwave radiation using and electromagnetic radiation monitor by holding the probe perpendicular to the surface being measured. (See Figure 6)

### C. MEASUREMENT WITH THE OUTER CASE REMOVED

- (1) When you replace the magnetron, measure for microwave energy leakage before the outer case is installed and after all necessary components are replaced or adjusted. Special care should be taken in measuring the following parts.
  - Around the magnetron
  - The waveguide

**WARNING:** AVOID CONTACTING ANY HIGH VOLTAGE PARTS.

#### D. MEASUREMENT WITH A FULLY ASSEMBLED OVEN

- (1) After all components, including the outer panels, are fully assembled, measure for microwave energy leakage around the door viewing window, the exhaust opening and air inlet openings.
- (2) Microwave energy leakage must not exceed the values prescribed below.

##### NOTES:

Leakage with the outer panels removed - less than 5mW/cm.sq. Leakage for a fully assembled oven (Before the latch switch (primary) is interrupted) with the door in a slightly opened position - less than 1 mW/cm.sq.

#### E. NOTE WHEN MEASURING

- (1) Do not exceed meter full scale deflection.
- (2) The test probe must be removed no faster than 1 inch/sec (2.5cm/sec) along the shaded area, otherwise a false reading may result.
- (3) The test probe must be held with the grip portion of the handle. A false reading may result if the operator's hand is between the handle and the probe.
- (4) When testing near a corner of the door, keep the probe perpendicular to the surface making sure the probe is moved horizontally along the oven surface.

#### F. RECORD KEEPING AND NOTIFICATION AFTER MEASUREMENT

- (1) After adjustment and repair of any microwave energy interruption or microwave energy blocking device, record the measured values for future reference. Also enter the information on the service invoice.
- (2) Should the microwave energy leakage not be more than 1mW/cm.sq. after determining that all parts are in good condition, functioning properly and genuine replacement parts which are listed in this manual have been used.
- (3) At least once a year, have the electromagnetic energy leakage monitor checked for calibration by its manufacturer.

#### G. POWER OUTPUT MEASUREMENT

- (1) Fill the test beaker with 59°F(15 °C) ~ 75°F(24°C) 1 liter tap water.
- (2) Stir the water in the beaker with thermometer ( °F or °C) and measure temperature as T1.
- (3) Place the beaker on the center of turntable.
- (4) Set for one (1) minute and three (3) seconds and operate the oven at high power.  
NOTE: The additional three (3) seconds is to allow the magnetron to begin generating power.
- (5) When the heating is finished, stir the water again with thermometer and measure the temperature of water as T2.
- (6) Subtract T1 from T2, this will give you the temperature rise.
- (7) The microwave power output is within specification, if the temperature rise is as shown below:

Line Voltage	Temperature Rise	
	Degrees°F	Degrees°C
120 V	17.1 ~ 22.5	9.5 ~ 12.5
108 V	Min. 12.6	Min 7.0

- (8) Power output will be influenced by line voltage of power supply. Consequently, correct power output must be measured within 120V AC  $\pm$  1 Volt while unit is operating.

#### SPECIAL TIP

- This oven used the button head screws.

- When you remove the screws, using the tamper-resistant Torx driver have a pin-in-head.

## 9. DISASSEMBLY INSTRUCTIONS

### IMPORTANT NOTES:

UNIT MUST BE DISCONNECTED FROM ELECTRICAL OUTLET WHEN MAKING REPAIRS, RE-PLACEMENTS, ADJUSTMENTS AND CONTINUITY CHECKS. WAIT AT LEAST ONE MINUTE, UNTIL THE HIGH VOLTAGE CAPACITOR IN THE HIGH VOLTAGE POWER SUPPLY HAS FULLY DISCHARGED. THE CAPACITOR SHOULD BE DISCHARGED BY USING INSULATED WIRE - I.E. TEST PROBE CONNECTED TO 10KOHM RESISTOR IN SERIES TO GROUND. WHEN RECONNECTING THE WIRE LEADS TO ANY PART, MAKE SURE THE WIRING CONNECTIONS AND LEAD COLORS ARE CORRECTLY MATCHED ACCORDING TO THE OVERALL CIRCUIT DIAGRAM. (ESPECIALLY SWITCHES AND HIGH VOLTAGE CIRCUIT.)

### A. REMOVING OUT SIDE CASE (Figures 7)

- (1) Remove five screws from the rear section.
- (2) Remove five screws from the side section.
- (3) Push the outer case back about 1 inch (3cm).
- (4) Lift the case from the set.

Figure 7

### B. REMOVING POWER AND CONTROL CIRCUIT BOARD(Figure 9)

- (1) Open the door.
- (2) Remove two screws from the cavity.
- (3) Disconnect the lead wire from RELAY(RY2) on the circuit board.
- (4) Lift up and pull out control panel assembly carefully from the cavity.
- (5) Disconnect the lead wire from connector(CN1) on the circuit board.
- (6) Remove three screws, securing the circuit board.

CAUTION: DISCHARGE THE HIGH VOLTAGE CAPACITOR BEFORE SERVICING.

Remove screw

Lift up and pull out pizza oven assembly

Figures 9

### C. DOOR ASSEMBLY / REMOVAL

- (1) Open the door.
- (2) Pull out the door protector very carefully with a flat blade screwdriver.

**CAUTION : Be careful not to damage door seal plate with the screwdriver.**

- (3) Lift up and push the door.

#### NOTE:

1. After replacing the door, be sure to check that the primary switch, monitor switch, and secondary switch operate normally.
2. After replacing the door, check for microwave energy leakage with a survey meter. Microwave energy must be below the limit of  $5 \text{ mW/cm}^2 \cdot \text{sq.}$  (with a 275 ml water load)
3. When mounting the door assembly to the oven assembly, be sure to adjust the door assembly parallel to the chassis. Also adjust so the door has no play between the inner door surface and oven frame assembly. If the door assembly is not mounted properly, microwaves may leak from the clearance between the door and the oven.

Remove door assembly

Remove door assembly

Figure 10

#### D. MAGNETRON REMOVAL

- (1) Disconnect the wire lead from the magnetron.
- (2) Carefully remove the mounting screws holding the magnetron and the waveguide.
- (3) Remove the magnetron assembly until the tube is clear from the waveguide.

#### NOTE:

1. When removing the magnetron, make sure its dome does not hit any adjacent parts, or it may be damaged.
2. When replacing the magnetron, be sure to install the magnetron gasket in the correct position and be sure that the gasket is in good condition.
3. After replacing the magnetron, check for microwave leakage with a survey meter around the magnetron. Microwave energy must be below the limit of  $5 \text{ mW/cm}^2$ . (With a 275 ml. water load).

**Make sure that gasket is rigidly attached to the magnetron.** To prevent microwave leakage, tighten the mounting screws properly, making sure there is no gap between the waveguide and the magnetron.

#### E. SUCTION GUIDE MAIN ASSEMBLY

**NOTE:** To repair any of them, the Suction Guide Main ASS'Y should be removed first.

- (1) Disconnect the wire lead from the capacitor and fan motor.
- (2) Remove two screws holding the Suction Guide Main ASS'Y to oven cavity.
- (3) Pull out Suction Guide Main ASS'Y from the oven.

## F. FAN MOTOR ASSEMBLY / REMOVAL

**NOTE:** To repair any of them, the Suction Guide Main ASS'Y should be removed first.

- (1) Disconnect the wire lead from the fan motor.
- (2) Remove the fan.
- (3) Remove the two screws holding the fan motor assembly to the suction guide ass'y.

## G. HIGH VOLTAGE TRANSFORMER REMOVAL

- (1) Discharge the high voltage capacitor.
- (2) Disconnect the wire lead from the magnetron, the high voltage transformer, and the capacitor.
- (3) Remove the screw holding the high voltage transformer to the base-plate.

## H. HIGH VOLTAGE CAPACITOR AND DIODE REMOVAL

- (1) Discharge the high voltage capacitor.
- (2) Disconnect the wire lead from the high voltage capacitor.
- (3) Remove the screw holding the high voltage capacitor bracket.

## I. REMOVING THE TURNTABLE MOTOR

- (1) Remove the glass turntable & the rotating ring ASS'Y by hand.
- (2) Remove the turntable motor cover.  
The turntable base cover is easily removed by pinching the six parts with wire cutting pliers.
- (3) Disconnect the wire lead from the turntable motor terminals.
- (4) Remove the screw securing the turntable motor to the oven cavity assembly.
- (5) After repairing the motor, rotate the removed turntable motor cover.
- (6) Fit the turntable motor cover's projecting part to the base plate slit.

### NOTE:

1. Remove the wire lead from the turntable motor **VERY CAREFULLY**.
2. Be sure to grasp the connector, not the wires, when removing.

## J. INTERLOCK SYSTEM

### (1) INTERLOCK MECHANISM

The door lock mechanism is a device which has been specially designed to eliminate completely microwave activity when the door is opened during cooking and thus to prevent the danger resulting from the microwave leakage.

### (2) MOUNTING OF THE PRIMARY/MONITOR/SECONDARY SWITCHES TO THE LATCH BOARD

### (3) INSTALLATION AND ADJUSTMENT OF THE LATCH BOARD TO THE OVEN ASSEMBLY

- Mount the latch board to the oven assembly.
- Adjust the latch board in the arrow direction so that oven door will not have any play in it when the door is closed.
- Tighten the mounting screw.
- **Check for play in the door by pushing the door release button. Door movement should be less than 0.5 mm. (1/64 inch)**

Don't push the door release button while making this adjustment. Make sure that the latch moves smoothly after adjustment is completed and that the screws are tight. Make sure the primary, monitor, and secondary switches operate properly by following the continuity test procedure.

## K. PIZZA OVEN ASSEMBLY REMOVAL

### Process #1

Remove out case

### Process #2

Remove connector 2EA

### Process #3

Remove connector 2EA

### Process #4

Remove screw 2EA on right side

### Process #5

Remove screw 2EA on left side

### Process #6

Separate the MWO Assembly

**Process #7**

Pizza Kits Assembly

**Process #8**

Remove pizza door Assembly  
- 4 screws

**Process #9**

**Process #10**

Remove Upper plate  
- 11 screws

**Process #11**

Remove Upper plate  
- 11 screws

**Process #12**

Separate Upper Heater

**Process #13**

Remove Lower Heater

**Process #14**

Remove 1 nut

**Process #15**

Remove Pizza Front Assembly  
- 2 screws

**Process #16**

Remove Pizza Front Assembly  
- 2 screws

**Process #17**

Remove Pizza Front Assembly

**Process #18**

Separate the LED parts  
- Switch Lever  
- LED Cover & PCB

## 10. INTERLOCK CONTINUITY TEST

**WARNING : FOR CONTINUED PROTECTION AGAINST EXCESSIVE RADIATION EMISSION, REPLACE ONLY WITH IDENTICAL REPLACEMENT PARTS.**

TYPE NO. SZM-V 16-FA-63 OR VP-533A-OF FOR PRIMARY SWITCH

TYPE NO. SZM-V 16-FA-62, VP-532A-OF FOR MONITOR SWITCH

TYPE NO. SZM-V 16-FA-63 OR VP-533A-OF FOR SECONDARY SWITCH

### A. PRIMARY INTERLOCK SWITCH TEST

When the door release button is depressed slowly with the door closed, an audible **click** should be heard at the same time or successively at intervals. When the button is released slowly, the latches should activate the switches with an audible **click**.

If the latches do not activate the switches when the door is closed, the switches should be adjusted in accordance with the adjustment procedure. Disconnect the wire lead from the primary switch. Connect the ohmmeter leads to the common (COM) and normally open (NO) terminal of the switch. The meter should indicate an open circuit in the door open condition. When the door is closed, the meter should indicate a closed circuit.

When the primary switch operation is abnormal, make the necessary adjustment or replace the switch only with the same type of switch.

### B. SECONDARY INTERLOCK SWITCH TEST

Disconnect the wire lead from the secondary switch. Connect the ohmmeter leads to the common (COM) and normally open (NO) terminals of the switch. The meter should indicate an open circuit in the door open condition. When the door is closed, meter should indicate a closed circuit. When the secondary switch operation is abnormal, make the necessary adjustment or replace the switch only with the same type of switch.

### C. MONITOR SWITCH TEST

Disconnect the wire lead from the monitor switch. Connect the ohmmeter leads to the common (COM) and normally closed (NC) terminals of the switch. The meter should indicate closed circuit in the door open condition. When the door is closed, meter should indicate an open circuit. When the monitor switch operation is abnormal, replace with the same type of switch.

**NOTE:** After repairing the door or the interlock system, it is necessary to do this continuity test before operating the oven.

COMPONENTS	TEST PROCEDURE	RESULTS	
		Door open	Door closed
SWITCHES (Wire leads removed)	Check for continuity of the switch with an Ohm-meter		
	Primary Switch 		
	Monitor Switch 		
	Secondary Switch 		

**NOTE :** After checking for the continuity of switches, make sure that they are connected correctly.

## 11. TEST AND CHECKOUT PROCEDURES, AND TROUBLESHOOTING

### CAUTIONS

1. DISCONNECT THE POWER SUPPLY CORD FROM THE OUTLET WHENEVER REMOVING THE OUTER CASE FROM THE UNIT. PROCEED WITH THE TEST ONLY AFTER DISCHARGING THE HIGH VOLTAGE CAPACITOR AND REMOVING THE WIRE LEADS FROM THE PRIMARY WINDING OF THE HIGH VOLTAGE TRANSFORMER.
2. ALL OPERATIONAL CHECKS WITH MICROWAVE ENERGY MUST BE DONE WITH A LOAD (1 LITER OF WATER IN CONTAINER) IN THE OVEN.

### A. TEST PROCEDURES

COMPONENTS	TEST PROCEDURE	RESULTS
<p>HIGH VOLTAGE TRANSFORMER (Wire leads removed)</p>	 <p>The diagram shows a high voltage transformer with three terminals. The 'FILAMENT WINDING TERMINAL' is at the top, connected to a small box. The 'SECONDARY TERMINAL' is on the right side. The 'PRIMARY TERMINAL' is at the bottom left. The transformer is mounted on a metal base plate.</p> <ol style="list-style-type: none"> <li>1. Measure the resistance. (Select the <math>\Omega</math> scale on the meter) <ul style="list-style-type: none"> <li>• Primary winding</li> <li>• Secondary winding</li> <li>• Filament winding</li> </ul> </li> <li>2. Measure the resistance. (Select the <math>\Omega</math> scale on the meter) <ul style="list-style-type: none"> <li>• Primary winding to ground</li> <li>• Filament winding to ground</li> </ul> </li> </ol>	<p>Approx.: 1.4 ohm Approx.: 90 ohm Less than: 0.1 ohm</p> <p>Normal: Infinite Normal: Infinite</p>
<p>MAGNETRON (Wire leads removed)</p>	<ol style="list-style-type: none"> <li>1. Measure the resistance. (Select the <math>\Omega</math> scale on the meter) <ul style="list-style-type: none"> <li>• Filament terminal</li> </ul> </li> <li>2. Measure the resistance. (Select the <math>\Omega</math> scale on the meter) <ul style="list-style-type: none"> <li>• Filament to chassis</li> </ul> </li> </ol>	<p>Normal: Less than 1 ohm</p> <p>Normal: Infinite</p>

COMPONENTS	TEST PROCEDURE	RESULTS																																
	 <p>NOTE: When testing the magnetron, be sure to install the magnetron gasket in the correct position and be sure that the gasket is in good condition.</p>																																	
<p>HIGH VOLTAGE CAPACITOR</p> 	<ol style="list-style-type: none"> <li>1. Check DC 9V battery before performing tests.</li> <li>2. Select the DCV scale on the meter.</li> <li>3. Using the meter, battery, and jump wire, connect the items as illustrated in figures.</li> </ol> <p>■ Terminal to terminal</p>  <p>■ Terminal to case</p> 	<p>Normal: Approximately 9V</p> <p>Normal: Approximately 0V or a value displayed in mV Will be seen.</p>																																
<p>RELAY 2</p>	<p>Check for continuity of relay 2 with an ohm-meter. (Remove wire leads from relay 2 and operate the unit.)</p>  <p>Relay 2</p>	<p>POWER LEVEL</p>	<p>0</p>	<p>0.1</p> <table border="1"> <tr><td>1</td><td>4 sec</td><td>18 sec</td></tr> <tr><td>2</td><td>6 sec</td><td>16 sec</td></tr> <tr><td>3</td><td>8 sec</td><td>14 sec</td></tr> <tr><td>4</td><td>10 sec</td><td>12 sec</td></tr> <tr><td>5</td><td>12 sec</td><td>10 sec</td></tr> <tr><td>6</td><td>14 sec</td><td>8 sec</td></tr> <tr><td>7</td><td>16 sec</td><td>6 sec</td></tr> <tr><td>8</td><td>18 sec</td><td>4 sec</td></tr> <tr><td>9</td><td>20 sec</td><td>2 sec</td></tr> <tr><td>10</td><td>22 sec</td><td>0 sec</td></tr> </table>	1	4 sec	18 sec	2	6 sec	16 sec	3	8 sec	14 sec	4	10 sec	12 sec	5	12 sec	10 sec	6	14 sec	8 sec	7	16 sec	6 sec	8	18 sec	4 sec	9	20 sec	2 sec	10	22 sec	0 sec

9	20 sec	2 sec																																
10	22 sec	0 sec																																

COMPONENTS	TEST PROCEDURE	RESULTS
<p>H.V.Diode (RECTIFIER)</p> 	<p><b>STEP 1. Test the diode to see if it is shorted.</b>  Procedure:  1. Select the <math>\Omega</math> scale on the meter.  2. Place the meter leads across the diode as pictured in Figure 1. The reading should be “40M <math>\Omega</math>,” “OL,” or a reading of infinity.  3. Reverse the meter leads. The reading should again indicate a reading of infinity. If the diode shows “infinity” in BOTH directions, it is NOT shorted.  4. If the diode is not shorted, proceed to step 2.</p> <p><b>STEP 2. Test the diode for forward biasing.</b>  Procedure:  1. Select the DCV scale on the meter.  2. Using the meter, battery and jumper wire, connect the items as illustrated in Figure 2. This has the positive side of the battery connected to the cathode of the diode.  3. The diode should be forward biased therefore a voltage reading of approximately 4.7 VDC to 6.4 VDC will be read depending on meter, battery strength, etc. (Note: If the meter leads were reversed, a negative voltage of the same amount would be seen.)</p> <p><b>STEP 3. Test the diode for reverse biasing.</b>  Procedure:  1. Using the same scale on the meter, connect the positive side of the battery to the anode of the diode as illustrated in Figure 3.  2. The diode should be reverse biased therefore a reading of 0 volt or a value displayed in mV will be seen. (The display will be erratic changing values rapidly in the mV scale.)</p>	<p>Normal:  Approximately  4.7-6.4V</p> <p>Normal:  Approximately 0V</p>
<div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p><b>Figure 1</b></p> </div> <div style="text-align: center;">  <p><b>Figure 2</b></p> </div> <div style="text-align: center;">  <p><b>Figure 3</b></p> </div> </div>		

COMPONENTS	TEST PROCEDURE	RESULTS		
		POWER LEVEL		
<b>RELAY 2</b> (Power Relay)  	1. Measure continuity. 2. Remove the lead wires and operate oven at power level 1 through power level 10.	1 2 3 4 5 6 7 8 9 10	4 sec 6 sec 8 sec 10 sec 12 sec 14 sec 16 sec 18 sec 20 sec 22 sec	18 sec 16 sec 14 sec 12 sec 10 sec 8 sec 6 sec 4 sec 2 sec 0 sec
<b>FAN MOTOR</b>   	1. Remove wire leads. 2. Measure resistance.	Normal: A: Approximately 95~120 ohms. B: Approximately 10~25 ohms.  Abnormal: Infinite		
<b>TURNTABLE MOTOR</b>   	1. Remove wire leads. 2. Measure resistance.	Normal: Approx. 2.5~3.5 Kohms Abnormal: Infinite or several ohm.		
<p><b>NOTE :</b>• A MICROWAVE LEAKAGE TEST MUST ALWAYS BE PERFORMED WHEN THE UNIT IS SERVICED FOR ANY REASON.</p> <ul style="list-style-type: none"> <li>• MAKE SURE THE WIRE LEADS ARE IN THE CORRECT POSITION.</li> <li>• WHEN REMOVING THE WIRE LEADS FROM THE PARTS, BE SURE TO GRASP THE CONNECTOR, NOT THE WIRES.</li> </ul>				

## B. CHECKOUT PROCEDURES

### (1) CHECKOUT PROCEDURES FOR FUSE BLOWING

**CAUTION:** REPLACE BLOWN FUSE WITH 15 AMPERE FUSE.

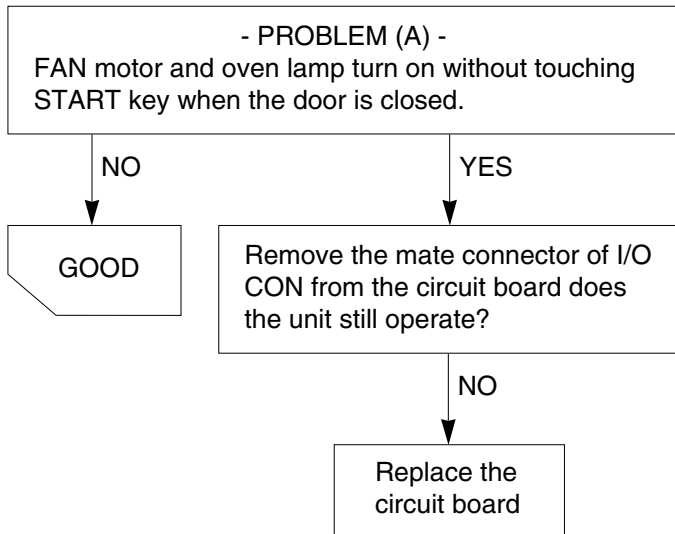

PROBLEMS	CAUSES
Fuse blows immediately after the door is closed.	Improper operation of the primary interlock, secondary interlock switches and/or the interlock monitor switch.
Fuse blows immediately after the door is opened.	
Fuse blows when the door is closed and START key is touched.	Malfunction of the high voltage transformer; the high voltage capacitor including the diode, the magnetron, the blower motor or the circuit board.

**NOTES:**

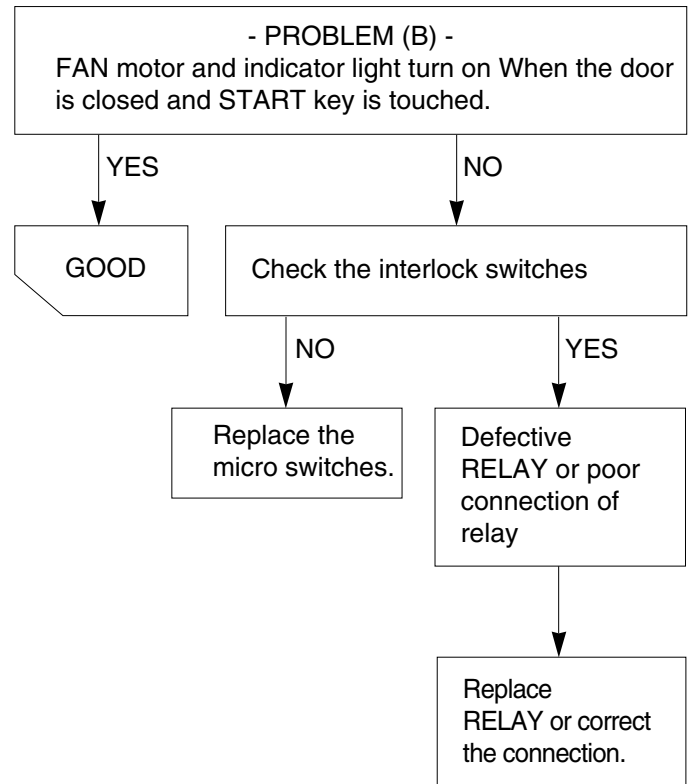

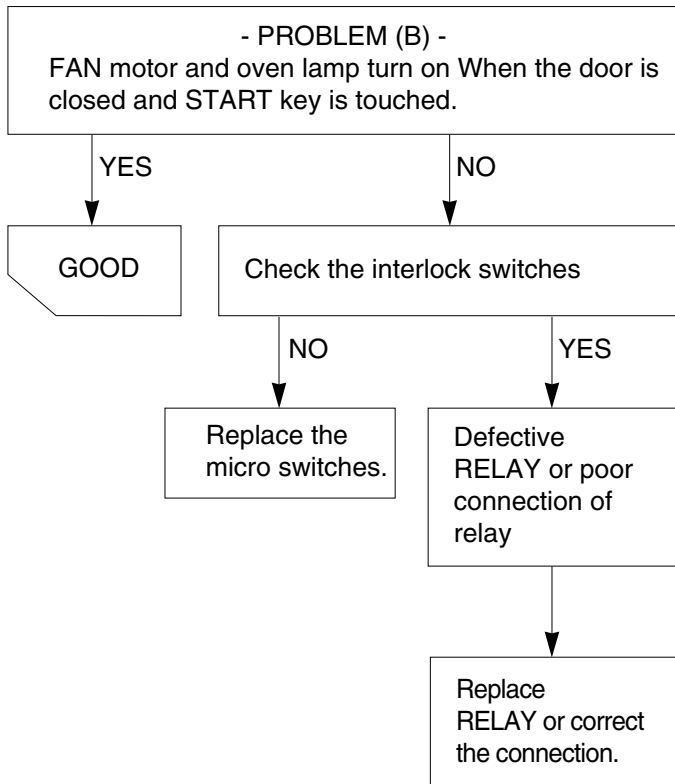

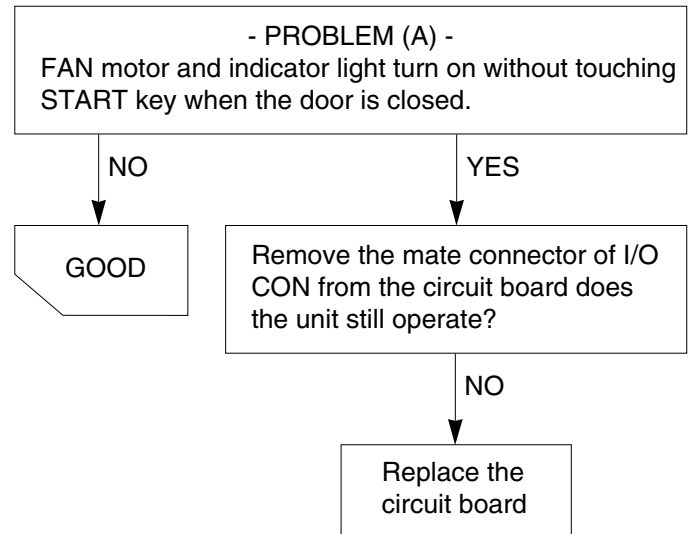

- If the fuse is blown by an improper switch operation, replace the defective switches and the fuse at the same time. After replacing the defective switches with new ones, make sure that they are correctly connected.
- Check for microwave energy leakage according to "1. ADJUSTMENT PROCEDURES" on page 3, when the primary interlock, secondary interlock switches and/or the interlock monitor switches are adjusted or replaced.

(2) CHECKOUT PROCEDURES FOR RELAY.

**Microwave Oven**

**Pizza Oven**

### (3) CHECKOUT PROCEDURES FOR CIRCUIT BOARD

The following symptoms indicate a defective circuit board.

- (1) The start function fails to operate but the high voltage Systems, the interlock switches, the door sensing and the relay check good.
- (2) The unit with a normal relay continuously operates.
- (3) The buzzer does not sound or continues to sound.
- (4) Some segments of one or more digits do not light up, or they continue to light up, or segments light when they should not.
- (5) Wrong figures appear.
- (6) The figures of all digits flicker.
- (7) Some of the indicators do no light up.
- (8) The clock does not keep time properly.
- (9) The clock does not keep time properly.

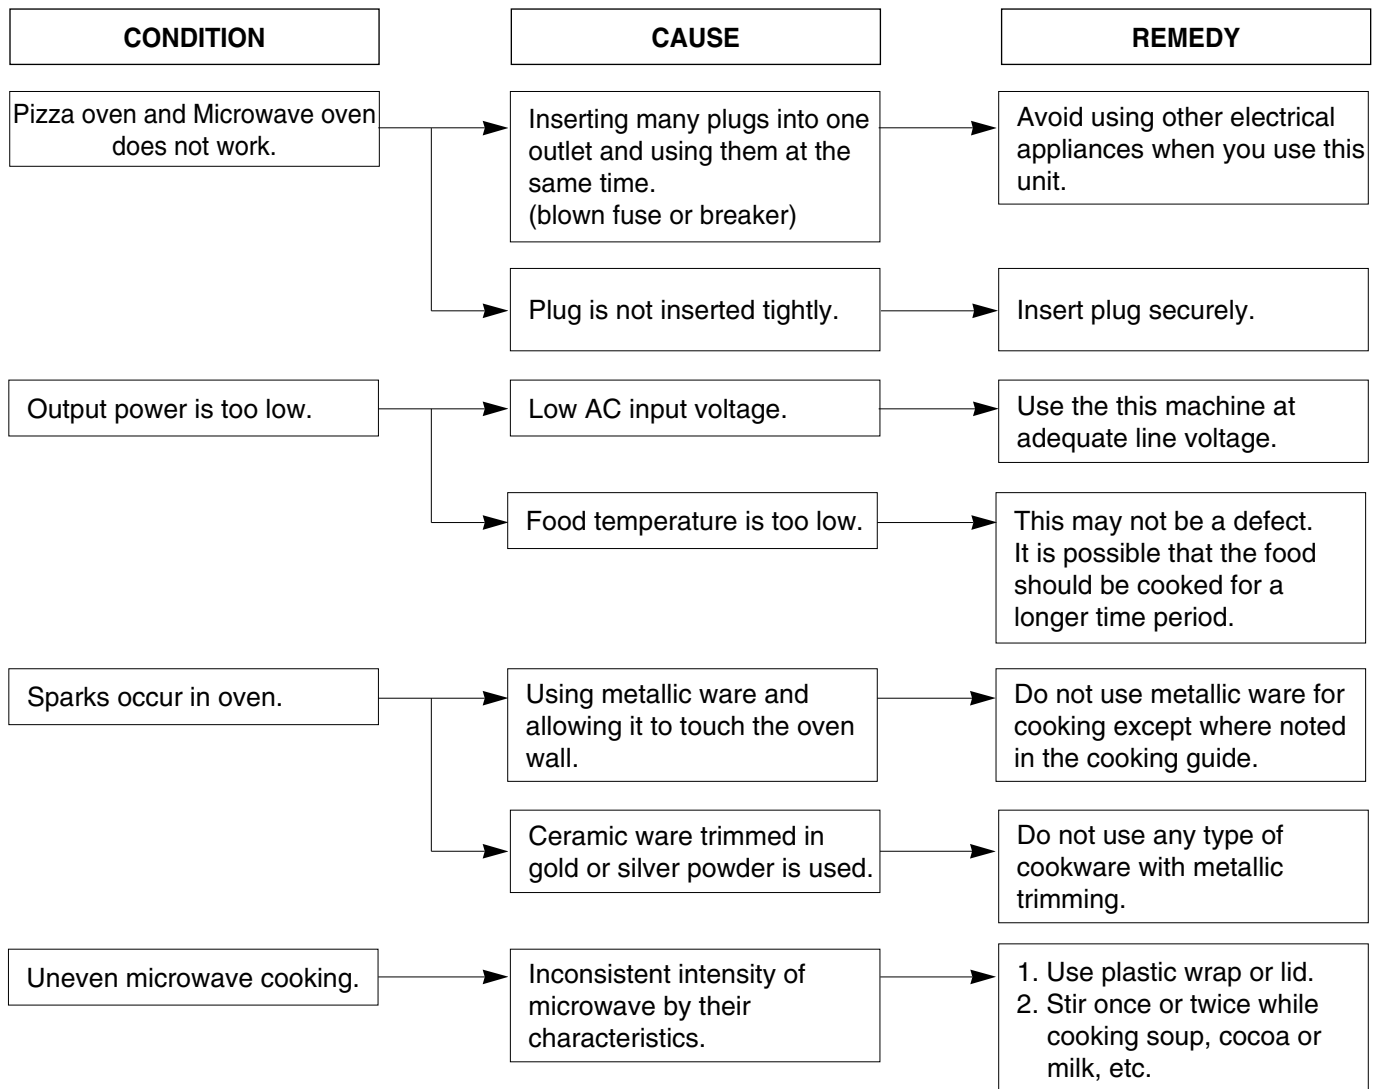

**NOTE:** A MICROWAVE ENERGY LEAKAGE TEST MUST ALWAYS BE PERFORMED WHEN THE UNIT IS SERVICED FOR ANY REASON.

## C. TROUBLE SHOOTING

WHEN YOU GET A COMPLAINT FROM YOUR CUSTOMER, EVALUATE THE COMPLAINT CAREFULLY. IF THE FOLLOWING SYMPTOMS APPLY, PLEASE INSTRUCT THE CUSTOMER IN THE PROPER USE OF THE PIZZA OVEN AND MICROWAVE OVEN. THIS CAN ELIMINATE AN UNNECESSARY SERVICE CALL.

### CAUTIONS

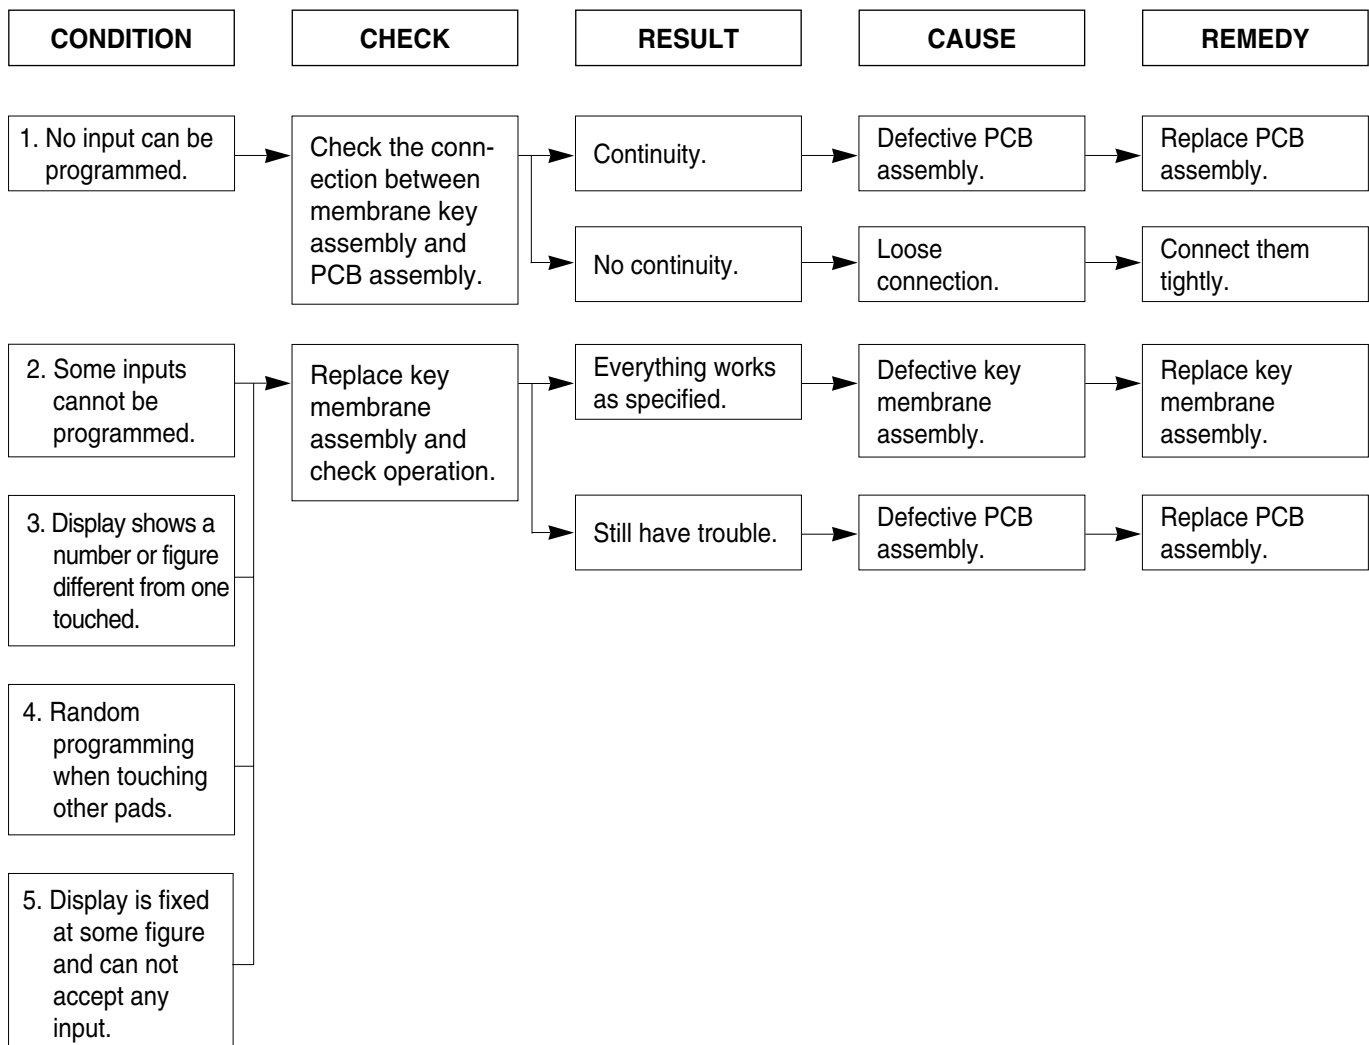

1. Check grounding and cool this unit before checking for trouble.
2. Be careful of the high voltage circuit.
3. Discharge the high voltage capacitor.
4. When checking the continuity of the switches or of the high voltage transformer, disconnect one lead wire from these parts and then check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.
5. Do not touch any part of the circuit on the PCB since static electric discharge may damage this control panel. Always touch yourself to ground while working on this panel to discharge any static charge built up in your body. (Micom model only)

**(TROUBLE 1) The following visual conditions indicate a probable defective control circuit.**

1. Incomplete segments.
  - Segment missing.
  - Partial segment missing.
  - Digit flickering (NOTE: Slight flickering is normal.)
2. Colon does not turn on or blink.
3. A distinct change in the brightness of one or more numbers in display.
4. One or more digits in the display are not lighting.
5. Display indicates a number different from one touched, for example, key in **5** and **3** appears in the display.
6. Specific numbers (for example 7 or 9) will not display when key pad is touched.
7. Display does not count down with time blinking or up with clock operation.
8. Display obviously jumps in time while counting down.
9. Display counts down too fast while cooking.
10. Each indicator light does not turn on after setting cooking cycle.
11. Display time of day does not reappear when cooking is finished.

**(TROUBLE 2) Microwave oven does not operate at all, Display window does not display any figures, and no input is accepted.**

CONDITION	CHECK	RESULT	CAUSE	REMEDY	
1. Fuse blows.	Check continuity of monitor switch (with door closed).	Continuity.	Malfunction of the monitor switch.	Replace fuse, primary, monitor switches, and RELAY(RY2) of P.C.B Assembly.	
		No continuity.			
	Replace fuse	Check continuity of primary switch (with door opened).	Continuity.	Shorted contact at the primary switch.	Replace fuse, primary, monitor switches, and RELAY(RY2) of P.C.B Assembly.
			No continuity.		
	Disconnect one side of the wire lead connected from transformer to the high voltage capacitor and operate the unit.		Normal.	Defective high voltage capacitor.	Replace high voltage capacitor.
			Fuse blows again	Defective high voltage transformer.	Replace high voltage transformer.
2. Fuse does not blow.	Check continuity of thermostat.	No continuity.	Defective thermostat.	Replace thermostat.	
		Continuity.			
	Check continuity of power supply cord.	No continuity.	Defective power supply cord.	Replace power supply cord.	

**(TROUBLE 3) Display shows all figures set, but microwave oven does not start cooking while desired program times are set and START pad is touched.**

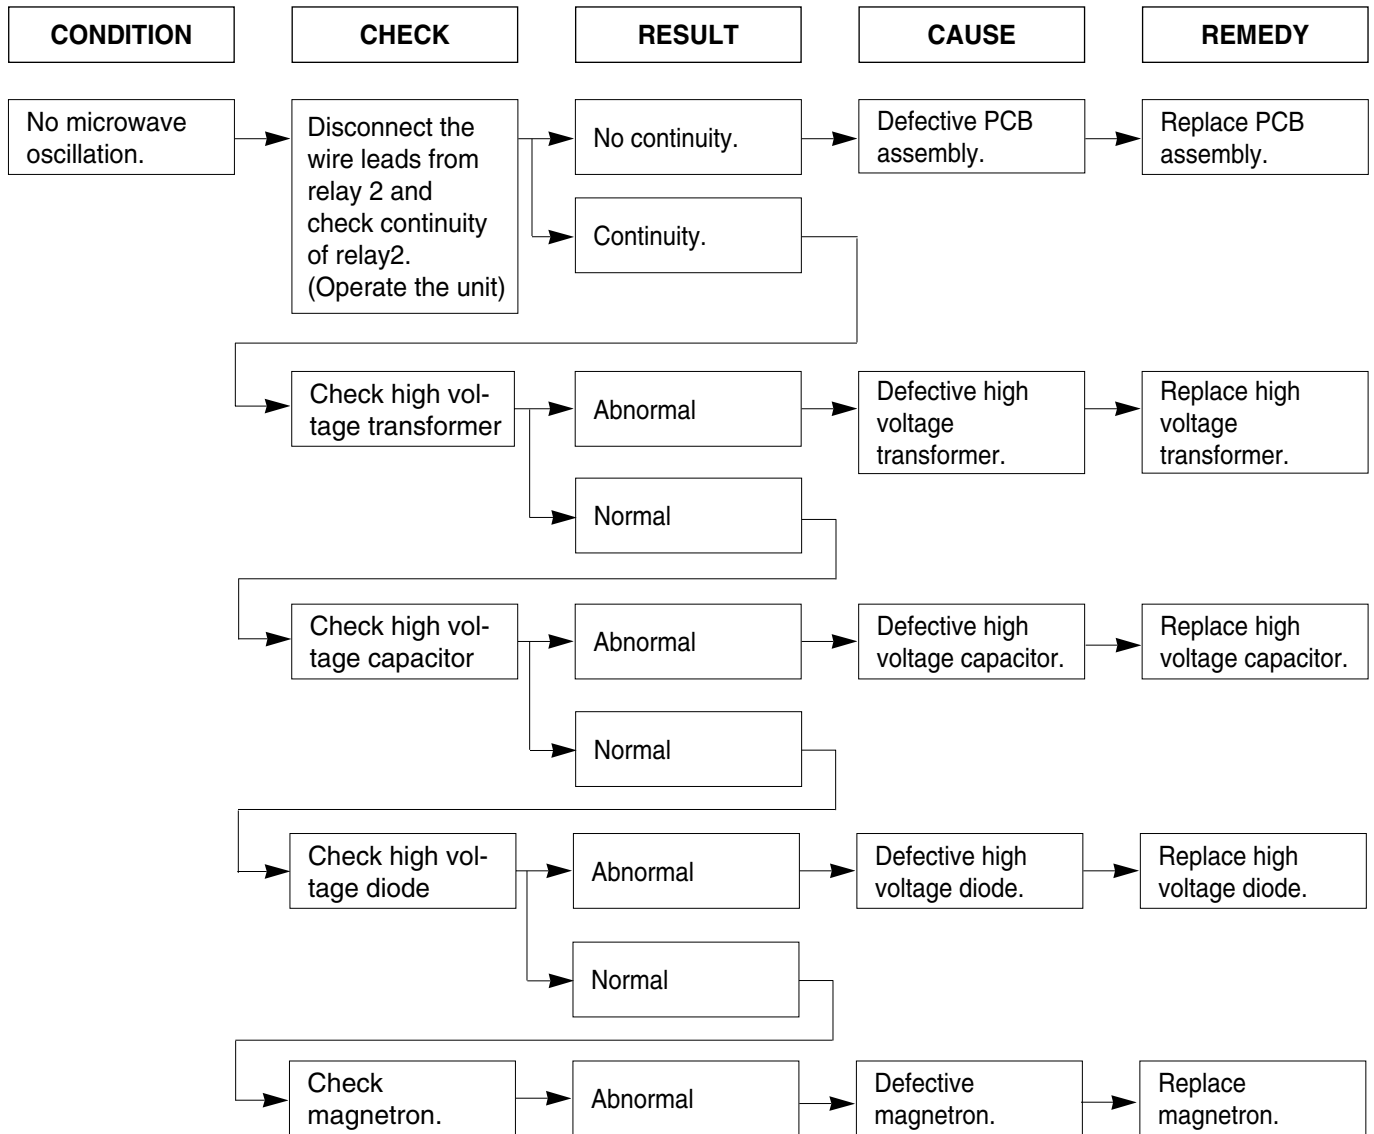

CONDITION	CHECK	RESULT	CAUSE	REMEDY
1. Setting time does not count down when touching START pad.	Check continuity of secondary switch (with door closed).	No continuity.	Defective secondary switch.	Replace secondary switch.
		Continuity.		
	Check the connection between CN1 connector and PCB assembly.	Continuity.	Defective PCB assembly.	Replace PCB assembly.
		No continuity.	Loose connection.	Connect them tightly.
2. Fan motor or oven lamp do not turn on.	Check fan motor.	Abnormal.	Defective fan motor.	Replace fan motor.
	Check oven lamp.	Abnormal.	Defective oven lamp.	Replace oven lamp.
		Normal.		

**(TROUBLE 4) Microwave oven seems to be operating but little heat is produced in oven load.**

CONDITION	CHECK	RESULT	CAUSE	REMEDY
Output is low.	Check the power source voltage.	Lower than 90% of rating voltage.	Decrease in power source voltage with load.	Suggest customer contact local electric power utility co. or qualified electrician.
		Normal.		
	Disconnect the wire leads from relay 2 and check on and off time with multimeter.	Abnormal.	Defective PCB assembly.	Replace PCB assembly.
		Normal.		
	Measure the output power.	Abnormal.	Defective magnetron.	Replace magnetron.

**NOTE :** Simple test of power output-conducted by heating one liter water for one min. if available. Minimum 8.5°C temperature rise is normal condition.

**(TROUBLE 5) No microwave oscillation even though oven lamp and fan motor run.  
(Display operates properly)**

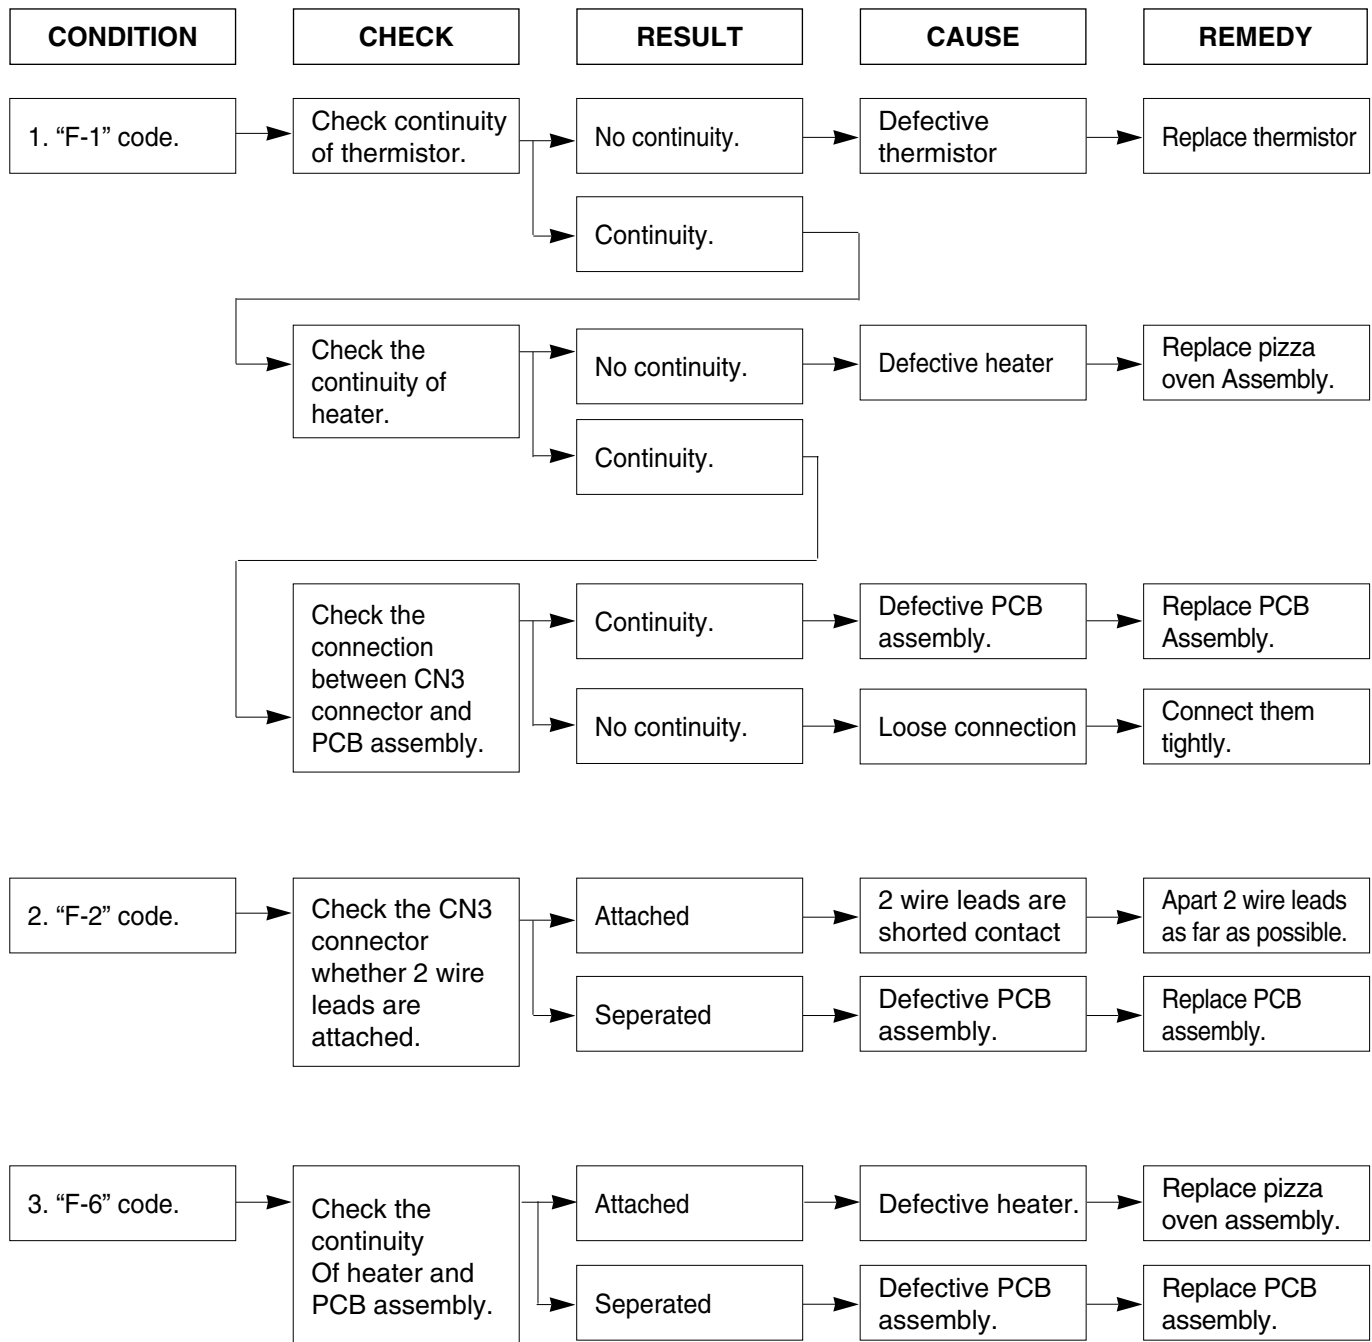

**NOTE :** • Make sure the wire leads are in the correct position.

- When Removing the wire leads from the parts, be sure to grasp the connector, not the wires.
- When removing the magnetron, be sure to install the magnetron gasket in the correct position and in good condition.

**(TROUBLE 6) When pizza oven operates, strange code can be seen on the display and stop with beep sound.**
