Humidifiers

RHEEM[®]
Air Conditioning

**84-25054-01
POWER BYPASS**

**84-25054-02 & 84-25054-05
FLOW-THRU BYPASS**

**84-25054-04
ATOMIZER**

**84-25054-08
DRUM TYPE**

WHY HUMIDIFY?

- Behind air conditioning, winter humidification is the second most requested feature in new homes.
- Adding humidification will reduce energy costs — homeowners are more comfortable at lower thermostat settings.
- Proper humidification reduces annoying static electricity and contributes to the well-being of pets and indoor plants.
- Proper humidification protects wooden floors, cabinets and furnishings.
- Recommended indoor humidity is between 30% and 50%. More or less can increase the likelihood of bacteria, virus, fungus and mites — which can contribute to respiratory problems.
- Proper humidification increases indoor COMFORT!

CAPACITY GUIDE

The following table shows gallons per day (GPD) needed for optimum comfort based on various home sizes and construction characteristics:

Square Footage	Tight House	Average House	Loose House
1000	0.5 GPD	5.0 GPD	10.0 GPD
1500	3.0 GPD	10.0 GPD	16.5 GPD
2000	5.0 GPD	14.0 GPD	24.0 GPD
2500	7.5 GPD	19.0 GPD	30.5 GPD
3000	10.0 GPD	23.5 GPD	37.5 GPD
4000	14.5 GPD	33.0 GPD	51.5 GPD

Calculations based on:

- Indoor temperature of 70°F and 35% relative humidity
- Outdoor temperature of 20°F and 70% relative humidity
- 8' ceiling height
- Internal moisture gain of 1 lb. per hour
- Furnace on-time of 70%

Tight House - Well insulated with vapor barriers, tight storm doors and windows, and dampered fireplace. Air change rate of .50 changes per hour.

Average House - Insulated with a dampered fireplace. No vapor barriers. Loose storm doors and windows. Air change rate of 1.0 change per hour.

Loose House - Constructed before 1930. Little or no insulation. No storm doors or windows, no weather stripping or vapor barriers. No dampering of fireplaces. Air change rate as high as 1.5 changes per hour.
