JP389BD/WD – GE Select-Top™ Modular Downdraft Cooktop

Cutout Dimensions (in inches)

*U.L. Requirement.

Note: A 6" minimum spacing to adjacent side wall is required

Note: In some cabinets, the sides may need to be scooped or braces removed in order to accommodate the cooktop.

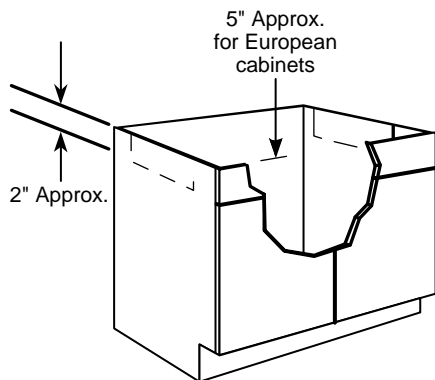

Wall Installation: Wall installations require 25" countertop depth. If the wall is not 25" deep, the fan housing can be rotated to the horizontal position. Make a countertop cutout that is centered in the range and installation type. Duct hole is positioned in back of cabinet.

Peninsula or Island Installation: For peninsula or island installation, a minimum depth of 25" is suggested. Blower should be in vertical position. Make adjustment in cutout depth and/or location within the width of the bottom of cabinet for island or peninsula installation.

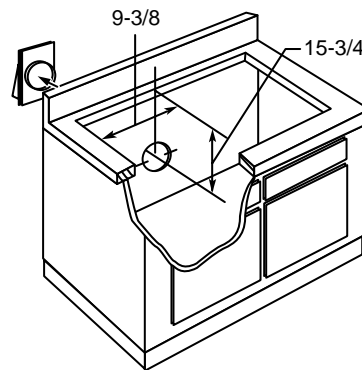

Slab Installation: For peninsula or island installation and slab installation, **approved piping should be used if installing under a concrete slab.**

Installing the Ductwork: Use minimum 26-gauge galvanized or 24-gauge aluminum duct in 6" round size for both. **PVC duct or locally approved piping should be used if installing under a concrete slab.**
