TECHNICAL SUPPORT

IF YOU NEED TECHNICAL SUPPORT, PLEASE CALL (705) 504-8590 BETWEEN THE HOURS OF 8:00 A.M. and 5:00 P.M. EST.
PLEASE HAVE THE MODEL NUMBER AND SERIAL NUMBER OF YOUR EQUIPMENT AVAILABLE WHEN YOU CALL.

AIR CONDITIONER SAFETY

Your safety and the safety of others is very important
We have provided many important safety messages in this manual and on your appliance. Always read and follow all safety instructions.

This is the safety alert symbol.
This symbol alerts you to potential hazards that can kill or hurt you or others.

All safety messages will follow the safety alert symbol and the word "DANGER" or "WARNING".

These words mean:

⚠ **DANGER** **You can be seriously injured if instructions are not followed.**

⚠ **WARNING** **Bodily injury or damage to personal property may occur if instructions are not followed.**

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

IMPORTANT SAFETY INSTRUCTIONS

WARNING: To reduce the risk of fire, electrical shock, or injury when using your air conditioner, follow these basic precautions:

- Plug into a grounded 3 prong outlet.
- Do not remove ground prong
- Do not use an adapter.

- Do not use an extension cord
- Unplug air conditioner before servicing
- Use two or more people to move and install air conditioner.

SAVE THESE INSTRUCTIONS

INSTALLATION REQUIREMENTS

Gather the required tools and parts before starting installation. Read and follow the instructions provided with the tools listed Here.

Tools Needed

- **Flat-Blade and Phillips screwdrivers**
- **Level**

- **Tape measure**
- **Drill and 3/32" or smaller bit**

Through-the-wall installation
In addition to the tools listed above, the following tools are Needed for through-the-wall installations:

- **Saw**
- **Wood Preservative**
- **Caulk**

- **1" (2.5cm) or thicker lumber**
- **7 - #10 x 1" wood screws**

IMPORTANT: Observe all governing codes and ordinances. Check the location where air conditioner will be installed. Proper Installation is your responsibility. Make sure you have everything necessary for correct installation.

The location should provide:

- **Grounded electrical outlet within 4 ft (122 cm) of where the power cord exits the air conditioner. NOTE: Do not use an extension cord.**
- **Free movement of air in room to be cooled**
- **A large enough opening for the air conditioner**

NOTE: Cabinet louvers must not be obstructed. Air must be able to pass freely through the cabinet louvers.

Parts Supplied (on some models)
Check that all parts are included in the parts package.
A. Foam window sash seal
B. Window lock brackets (2)
C. #10 x ¼" pan-head Phillips screws (6)
D. #10 x ⅜" washer-head Phillips screws (3)
E. #10 x ¾" round-head screws (6)
F. #10 x ½" pan-head Phillips screws (3)
G. Top channel
H. Side curtains (2)
I. Foam adhesive seal

Window Installation

Window opening measurements:
- 27" min to 38" max (68.6 cm to 95.5cm) opening width.
- 16 ¼" min. (41.3 cm) opening height.
A. 27" min. (68.6 cm)
B. 16 ¼" min. (41.3 cm)

Through-the wall installation

The wall opening measurements should be:
- A = Height: 16" (40.6cm) plus twice the thickness of the wood used to build the frame.
- B = Width: 22 5/8" (57.5 cm) plus twice the thickness Of the wood used to build the frame.
- C = Wood thickness.
- D = Dimension of depth depends on wall thickness and type of molding.
A. 16" (40.6 cm)   C. Wood thickness
B. 22⅝" (57.5 cm)   D. Depth

This air conditioner must be grounded. This air conditioner is equipped with a power supply cord having a grounded 3 prong plug. To minimize possible shock hazard, the cord must be plugged into a mating, grounded 3 prong outlet, grounded in accordance with all local codes and ordinances. If a mating outlet is not available, it is the customer's responsibility to have a properly grounded 3 prong outlet installed by a qualified electrical installer.

ELECTRICAL REQUIREMENTS

⚠WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.
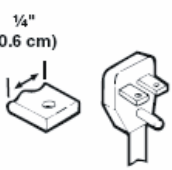

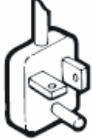

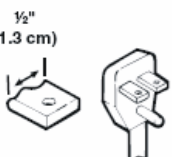

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

Ground wire must be connected to ground screw located in lower right corner of air conditioner when air conditioner is in cabinet.

The electrical ratings for your air conditioner are listed on the model and serial number label. The model and serial number label is located behind the front panel on the flange below the Control panel area.

Specific Electrical requirements are listed in the chart below.

Follow the requirements for the type of plug on the power supply cord.

| Power Supply Cord	Wiring Requirements
(A)	■ 115-volt (103.5 min. to 126.5 max.) ■ 0 to 12 amps ■ 15-amp time-delay fuse or circuit breaker ■ Use on single outlet circuit only.
(B) ¼" (0.6 cm)	■ 230-volt (207 min. to 253 max.) ■ 0 to 12 amps ■ 15-amp time-delay fuse or circuit breaker ■ Use on single outlet circuit only.
(C)	■ 230-volt (207 min. to 253 max.) ■ 0 to 16 amps ■ 20-amp time-delay fuse or circuit breaker ■ Use on single outlet circuit only.
(D) ½" (1.3 cm)	■ 230-volt (207 min. to 253 max.) ■ 0 to 24 amps ■ 30-amp time-delay fuse or circuit breaker ■ Use on single outlet circuit only.

It is the customer's responsibility to:

- Contact a qualified electrical installer.
- Assure that the electrical installation is adequate and in accordance with National Electrical Code, NNSI/NFPA 70- latest edition, and all local codes and ordinances.

Copies of the standards listed may be obtained from:
　　National Fire Protection Association
　　One Batterymarch Park
　　Quincy, MA 02269

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

LCDI Plug and Power Cord

NOTE: Your unit's device may differ from the ones shown.

A. Reset button
B. Test button

This room air conditioner is equipped with a power supply cord required by UL. This power supply cord contains state-of-the-art electronics that sense leakage current. If the cord is crushed, the electronics detect leakage current, and power will be disconnected in a fraction of a second.

To test your LCDI Power Cord

1. Plug power supply cord into a grounded 3 prong outlet.

2. Press RESET.

3. Press TEST (Listen for a click; Reset button will trip and pop out).

4. Press and release RESET (Listen for a click; Reset button will Latch and remain in). The power supply cord is ready for operation.

NOTES:

- The reset button must be pushed for proper operation
- The power supply cord must be replaced if it fails to trip when the test button is pressed of fails to reset
- Do not use the power supply cord as an off/on switch. The power supply cord is designed as a protective device.
- A damaged power supply cord must be replaced with a new power supply cord obtained from the product manufacturer and must not be repaired.
- The power supply cord contains no user serviceable parts. Opening the tamper-resistant case voids all warranty and performance claims.
INSTALLATION INSTRUCTIONS

UNPACKING

⚠ WARNING

Excessive Weight Hazard

Use two or more people to move and install air conditioner.

Failure to do so can result in back or other injury.

3. Pull off the control knobs (on some models)
4. Remove the two screws from the front panel.

5. Remove the front panel from the air conditioner and set aside
6. Remove the ground screw and ground wire from the front of the air conditioner base. Save the ground screw.
7. Pull on the handle to slide the air conditioner out of the cabinet. Place the air conditioner on cardboard.
Remove packaging materials
*   Remove and dispose or recycle all packaging materials. Remove tape and glue residue from surfaces before turning on the air conditioner. Rub a small amount of liquid dish soap over the adhesive with your fingers. Wipe with warm water and dry.
*   Do not use sharp instruments, rubbing alcohol, flammable fluids or abrasive cleaners to remove tape or glue. These products can damage the surface of your air conditioner.
*   Handle air conditioner gently.
    1. Remove air conditioner from carton and place it on cardboard.
   2. Remove shipping screws from both sides of cabinet.

A. Green ground wire
B. Ground screw

A. Handle

NOTE: Do not lift, push, pull, or remove any expanded polystyrene (foam) from inside the air conditioner. It is NOT packing material.

A. Shipping screw

Window Installation (on some models)

NOTES:
*   Handle air conditioner gently.
*   Be sure your air conditioner cabinet does not fall out of the opening during installation or removal.

*   The location where the power cord exits the air conditioner Should be no more than 4 ft (122cm) from a grounded 3 prong outlet.

*   Do not block the louvers on the front panel.

*   Do not block the louvers on the outside of the air conditioner.

_____
Attach Top Channel
_____

NOTE: Attach top channel and side curtains to air conditioner cabinet before placing cabinet in window.

1. Locate supplied bag of screws.
2. Place top channel on top of air conditioner cabinet, lining up The 3 holes in top channel with the 3 holes on top of air conditioner cabinet.

3. Using 3 - #10 x 3/8" pan-head Phillips screws, attach top channel to air conditioner cabinet.
A. Top channel
B. #10 x 3/8" pan-head Phillips screws(3)

Attach Side Curtains
_____

1. Locate provided bag of screws
2. Insert top and bottom of right-hand curtain housing in top and bottom curtain guides on air-conditioner cabinet.

Back View

A. Curtain housing
B. Curtain guides

Bottom View

A. Curtain housing
B. Curtain guides
3. Extend right-hand curtain outward so you may insert the first screw through the middle hole of the curtain. Using a #10 x ¼" pan-head Phillips screw, screw curtain to middle hole in air conditioner cabinet.

   NOTE: This screw is required to correctly attach curtain (top to bottom) to the air conditioner cabinet.

4. While the right-hand curtain is still extended, insert a #10 x ¼" pan-head Phillips screw into the top and bottom sides of the curtain. Screw curtain to the top and bottom holes in the air conditioner cabinet.

   NOTE: Some curtains may have 2 slots at each end. You will be able to see a mounting hole through the correct slot.

5. Slide curtain housing into guides as far as it will go.
6. Repeat above steps for left-hand curtain.

Attach Foam Adhesive Seal
_____

Attach foam adhesive seal along the bottom of the curtain bottom channel.

A. Curtain housing
B. Foam adhesive seal

Install Cabinet into Window
_____

- Handle air conditioner gently

- Be sure your air conditioner cabinet does not fall out of the opening during installation or removal.

- The location where the power cord exits the air conditioner should be no more than 4 ft (122 cm) from a grounded 3 prong outlet.

- Do not block the louvers on the front panel.

- Do not block the louvers on the outside of the air conditioner.

1. Center empty cabinet in window. Check that lower rail of air conditioner cabinet is behind and against back side of windowsill. Maintain a firm hold on the air conditioner cabinet. Lower window sash to hold cabinet in place.

2. Measure the distance between the right-hand side of the cabinet and the inside of the window channel.

3. Repeat for the left side. Adjust the cabinet until the distance on each side is the same.

A. Window sash
B. Empty cabinet
C. Window channel
4. Use a 3/16" drill bit to drill 3 starter holes 3/8" deep through the 3 holes in the cabinet and into the windowsill.

5. Attach cabinet to windowsill with 3 - #10 x 1/2" pan-head Phillips screws.
A. #10 x ½" pan-head Phillips screws
B. Windowsill

6. Check that air conditioner cabinet is tilted to the outside so that water will run to the outside.

_____
Attach Side Curtains to Window Frame
_____

1. Pull Left-hand curtain out until it fits into window channel. Use a 3/32" drill bit to drill a starter hole through the hole in the curtain housing and into the lower windows sash.

Front View
Top View
A. Left-hand curtain
B. Window channel
C. #10 x ¾" round-head screw

2. Insert one of the #10 x ¾" round-head screws through hole and into lower window sash.

3. Insert one of the #10 x ¾" round-head screws through threaded hole in top of curtain.
A. #10 x ¾" round-head screw
B. Hole for #10 x ¾" round-head screw

4. Repeat for right-hand curtain.

_____
Complete Window Installation
_____

1. Insert foam seal behind the top of the lower window sash and against the glass of the upper window.

2. Place window-lock bracket on top of lower window and against upper window sash.

3. Use a 3/32" drill bit to drill a starter hole through the hole in the bracket and into the window sash.

4. Attach window-lock bracket to window sash with #10 x ¾" round-head screw to secure window in place.
A. Window lock bracket   C. Upper window glass
B. Foam seal   D. #10 x 1/2" pan-head Phillips screws (3)

Complete Installation

WARNING

Excessive Weight Hazard

Use two or more people to move and install air conditioner.

Failure to do so can result in back or other injury.

NOTE: Handle the air conditioner gently.
1. Make sure the free end of the ground wire is outside of the cabinet.
2. Insert air conditioner into cabinet.

REMEMBER: Make sure the free end of the ground wire is outside of the cabinet.
A. Ground wire outside of the cabinet

WARNING

Electrical Shock Hazard

Connect green ground wire to ground screw.

Failure to do so can result in death or electrical shock.

3. Connect green ground wire to cabinet base with ground screw.

Position ground wire pointing straight up. Put excess ground wire between coil and air conditioner cabinet
A. Green ground wire
B. Ground screw

4. Insert front tabs of front panel into top of cabinet and swing front into place.

5. Attach bottom front of panel with front panel screws. Replace control knobs (on some models).
NOTE: For through-the-wall installations, if needed, install molding around room side of cabinet.

WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

6. Plug into a grounded 3 prong outlet.

7. Press RESET on the power supply cord plug.

AIR CONDITIONER USE

Operating your air-conditioner properly helps you obtain the best possible results.

This section explains proper air conditioner operation

IMPORTANT:
If you turn the air conditioner off, wait at least 3 minutes before turning it back on. This prevents the air conditioner from blowing a fuse or tripping a circuit breaker.

Do not try to operate your air conditioner in the cooling mode when outside temperature is below 65º F (18ºC). The inside evaporator coil will freeze up, and the air conditioner will not operate properly.

NOTE: in the event of a power failure, your air conditioner will operate at the previous settings when power is restored.

Starting Your Air Conditioner-Digital Control
NOTES:

When the air conditioner is off, the display shows the current room temperature.

If the room temperature is below 55ºF (13ºC), the display will show 55ºF (13ºC). If the room temperature is above 99ºF (37ºC), the display will show 99ºF (37ºC). The display operation ranges from 64 to 86 ºF.

1. Remove the clear protective film from the control panel and front panel badge (on some models.)

2. Press POWER to turn on the air conditioner.

 Note: When the air conditioner is turned on for the first time after it is plugged in, it will display the default settings: Cool mode, Turbo fan speed, 72ºF (22ºC) for 3 seconds. When it is turned on at all other times, it will display the previous settings for 3 seconds, and then display the room temperature.

3. Select mode. See "Mode".

4. Select fan speed. See "Fan Speed"

5. Set temperature. See "Temperature".

MODE

1. Press MODE until you see the indicator light turn on for the mode you desire.
2. Choose Cool, Fan Only or Power Saver.

Cool – Cools room. You can adjust temperature by pressing the plus or minus button. You can select fan speed by pressing Fan Speed.

Fan Only – Only the fan will run. You can select the fan speed by pressing Fan Speed, but you can not adjust the temperature control setting. The display shows the current room temperature.

Power Saver – The fan runs only when cooling is needed. You can select the fan speed by pressing Fan Speed. When this feature is selected, the fan will turn off when the temperature is satisfied. The fan and compressor will operate only as required to satisfy the set temperature.

Because the fan does not circulate the room air continuously, less energy is used, but the room air is not circulated as often.

FAN SPEED

1. Press FAN SPEED until you see the indicator light come on for the setting you desire.

2. Choose Turbo, High, Low, or Auto
3. In the Auto setting, the fan speed automatically adjusts depending on the room temperature.

FILTER MONITOR

1. When the filter indicator light is lit or flashing, remove, clean and replaces the air filter. See "Changing the Air Filter".

2. Press and hold FILTER for 3 seconds after cleaning and replacing the air filter. This resets the filter monitor.

NOTE: After 360 hours of fan operating time, the filter indicator light will turn on. It will remain on for 180 hours or until you press FILTER. After 180 hours, it will flash. It will continue flashing until you press FILTER.

TEMPERATURE
_____

Press the plus button to raise the temperature. Display shows the temperature control setting. Each time you press or hold the plus button, the temperature will increase 1ºF until it reaches 86ºF (30ºC).

NOTE: After 3 seconds, the display will show the current room temperature.

Press the minus button to lower the temperature. The display shows the temperature setting. Each time you press or hold the minus button, the temperature will decrease 1º until it reaches 64ºF (18ºC).

NOTE: After 3 seconds, the display will show the current room temperature.

To change the temperature display from ºF to ºC:
1. Turn off the air conditioner.

2. While the air conditioner is off, press and hold down the MODE and FAN SPEED buttons while pressing POWER to turn on the air conditioner.

NOTE: Follow these same steps to change the temperature display from ºC to ºF.

_____

Timer delay
_____

To set the Timer for a 1- to 24-hour delay until the air conditioner turns off (the air conditioner must be On):

1. Press TIMER. Timer indicator light will flash. Display will show remaining hours before air conditioner will turn off.

2. Press the plus or minus button to adjust the delay time (1 to 24 hours).

3. Press TIMER again or wait 10 seconds. Timer indicator light will remain on. Display will show the current room temperature.

To set the Timer to turn on the air conditioner, keeping previous settings:

1. Turn off air conditioner.

2. Press TIMER. Timer indicator light will flash. Display will show remaining hours before air conditioner will turn on.

3. Press the plus or minus button to change delay time (1 to 24 hours).

4. Press TIMER again or wait 10 seconds. Timer indicator light will remain on. Display will show current room temperature.

To set the timer to turn on the air conditioner, changing the previous settings:

1. Turn on air conditioner.

2. Adjust Mode to Cool, Fan Only, or Power Saver.

3. Adjust Fan Speed to Turbo, High, Low, or Auto.

4. Adjust temperature between 64ºF (18ºC) and 86ºF (30ºC).

5. Wait 3 seconds before turning off air conditioner.

6. Press TIMER. Timer indicator light will flash. Display will show remaining hours before air conditioner will turn on.

7. Press the plus or minus button to change delay time (1 to 24 hours).

8. Press TIMER again or wait 10 seconds. Timer indicator light will remain on. Display will show current room temperature.

To clear Timer Delay program:
Note: Air conditioner can be either off or on.

Press and hold timer for 3 seconds. Timer indicator light will shut off.

To see or change the remaining time (in hours):

1. Press TIMER once after it has been programmed. Display will show remaining time.

2. While the display is showing the remaining time, you can press the plus or minus button to increase or decrease the time.

3. After 10 seconds, display will show the current room temperature.

_____

To operate air conditioner with remote control
_____

NOTE: Remote control may vary in appearance.
NOTE: Two AAA batteries (included) power the remote control. Replace the batteries after 6 months of use, or when the remote control starts to loose power. The remote operates ranging from 64-86 ºF.

To turn the air conditioner on or off
Press POWER

POWER

To select the mode:
Press COOL, FAN, or POWER SAVER

COOL   FAN   Power saver

To select the fan speed:
Press FAN SPEED or AUTO for Turbo, High or Low.
NOTE: Auto fan speed can not be selected in Fan Only mode.

FAN SPEED   AUTO
To raise the temperature:
Press the plus button to raise the temperature. Each time you press or hold the plus button, the temperature will go up 1ºF until it reaches 86ºF (30ºC).

+

To lower the temperature:
Press the minus button to lower the temperature. Each time you press or hold the minus button, the temperature will go down 1ºF until it reaches 64ºF (18ºC).

−

To set Timer for a 1- to 24-hour delay before air conditioner is turned off (air conditioner must be on):
1. Press TIMER. Indicator light on air conditioner control panel will flash.

TIMER

2. Press the plus or minus button to change the delay time from 1 to 24 hours.
3. Press TIMER again or wait 10 seconds. Indicator light on air conditioner control panel will remain on.

To set Timer to turn on air conditioner, keeping previous settings:
1. Turn off air conditioner.
2. Press TIMER. Indicator light on air conditioner control panel will flash.
3. Press the plus or minus button to change delay time (1 to 24 hours).
4. Press TIMER again or wait 10 seconds. Indicator light on air conditioner control panel will remain on.

To set Timer to turn on air conditioner, changing the previous settings:
1. Turn on air conditioner.
2. Adjust Mode to Cool, Fan Only, or Power Saver.
3. Adjust Fan Speed to Turbo, High or low, or Auto.
4. Temperature range is 64ºF (18ºC) to 86ºF (30ºC).
5. Turn off Air Conditioner.
6. Press TIMER. Indicator light on air conditioner control panel will flash.
7. Press the plus or minus button to change delay time (1 to 24 hours).
8. Press TIMER again or wait 10 seconds. Indicator light on air conditioner control panel will remain on

Starting your Air Conditioner – Rotary Control – Heat/Cool Models

1. Select the fan speed. See "Fan Speed".
2. Set Temperature. See "Temperature"
Note: the panel may vary in appearance

FAN SPEED

Set FAN SPEED to the desired setting. When the air conditioner is operating at Low Heat or High Heat, Low Cool, High Cool, the fan circulates air continuously.

Low Heat -- For reduced heating.

High Heat -- For maximum heating

High Cool -- For maximum cooling

Low Cool -- For sleeping comfort.

Fan Only -- To move air continuously without cooling or heating.

NOTE: Fan runs on Turbo speed only. (in Fan Only position.

Power Saver (On Some Mode Only) – fan runs only when cooling or heating is needed.

Since the fan does not circulate the room air continuously, less energy is used, but the room air is not circulated as often. Use Power Saver when you are asleep or away from home.

TEMPERATURE

Cooling
Turn the TEMPERATURE control to a setting on the right-hand side of the knob. Adjust the air conditioner's performance by setting the Temperature control to "10" for maximum cooling. For less cooling, turn the TEMPERATURE control counterclockwise up to "6"
Heating
The electric strip is activated when the Fan Speed control is set to a heat setting. Turn the TEMPERATURE control to a setting on the left-hand side of the knob. For more heating, turn the TEMPERATURE control to "1" for maximum heating. For less heating, turn the TEMPERATURE control clockwise up to "5" on the left-hand side of the knob.
Experiment to find the setting that suits you best

NOTE:
Adjust temperature between "1" and "10". ("5" to "1" is warmer and "6" to "10" is cooler). Temperature range is 64°F to 86°F.
Your air conditioner is not designed to be used as a primary heat source. It is intended for supplemental heating only

Changing Air Direction
Roll the wheel to direct the air right or left. Rotate the whole cartridge to direct air up, down or straight ahead.

Normal Sounds
When your air conditioner is operating normally, you may hear sounds such as:
- Droplets of water hitting the condenser, causing a pinging or clicking sound. The water droplets help cool the condenser.
- Air movement from the fan.
- Clicks from the thermostat cycle.
- Vibrations or noise due to poor wall or window construction.
- A high-pitched hum or pulsating noise caused by the modern high-efficiency compressor cycling on and off.

AIR CONDITIONER CARE

Your new air conditioner is designed to give you many years of dependable service. This section tells you how to clean and care for your air conditioner properly. Call your local authorized dealer for an annual checkup. Remember… the cost of this service call is your responsibility.

Cleaning the Air Filter
The air filter is removable for easy cleaning. A clean filter helps remove dust, lint, and other particles from the air and is important for best cooling and operating efficiency. Check the filter every 2 weeks to see whether it needs cleaning.
NOTE: Do not operate the air conditioner without the filter in place.
1. Turn off air conditioner.

2. Remove air filter by sliding filter out from either side of unit.

3. Use a vacuum cleaner to clean the air filter. If air filter is very dirty, wash it in warm water with a mild detergent. Do not wash air filter in the dishwasher or use any chemical cleaners. Air dry filter completely before replacing to ensure maximum efficiency.

4. Replace air filter by sliding filter back into either side of unit.

Cleaning the Front Panel
1. Turn off air conditioner
2. Remove the air filter and clean it separately. See Cleaning the Air Filter.
3. Wipe the front panel with a soft, damp cloth.
4. Air dry front panel completely.

Repairing Paint Damage
Check once or twice a year for paint damage. This is very important, especially in areas near oceans or where rust is a problem. If needed, touch up with good grade enamel paint.

NOTE: To reduce paint damage during the winter, install a heavy duty cover over air conditioner cabinet.

Annual Maintenance
Your air conditioner needs annual maintenance to help ensure steady, top performance throughout the year. Call your local authorized dealer to schedule an annual checkup. The expense of an annual inspection is your responsibility.
TROUBLESHOOTING

Before calling for service, try the suggestions below to see whether you can solve your problem without outside help.

_____

Air Conditioner will not operate
_____

⚠ **WARNING**

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

The power supply cord is unplugged. Plug into a grounded 3 prong outlet. See "Electrical Requirements".

The power supply cord has tripped (Reset button has popped out). Press and release RESET (listen for click; Reset button will latch and remain in) to resume operation.

A household fuse has blown, or a circuit breaker has tripped. Replace the fuse or reset the circuit breaker. If the problem continues, call an electrician. See "Electrical Requirements".

Depending on model, the Power button has not been pressed or the Fan control is turned to Off. Press POWER or turn the Fan control to an active setting.

The local power has failed. Wait for power to be restored.

_____

Air Conditioner blows fuses or trips circuit breakers
_____

Too many appliances are being used on the same circuit. Unplug or relocate appliances that share the same circuit.

Time-delay fuse or circuit breaker of the wrong capacity is being used. Replace with a time-delay fuse or circuit breaker of the correct capacity. See "Electrical Requirements".

An extension cord is being used. Do not use an extension cord with this or any other appliance.

You are trying to restart the air conditioner too soon after turning the unit off. Wait at least 3 minutes after turning the unit off before trying to restart the air conditioner.

_____

Air conditioner power supply cord trips (Reset button pops out)
_____

Disturbances in your electrical current can rip (Reset button will pop out) the power supply cord. Press and release RESET (listen for click; Reset button will latch and remain in) to resume operation.

Electrical overloading, overheating, pinched cord can trip (Reset button will pop out) the power supply cord. After correcting the problem, press and release RESET (Listen for click; Reset button will latch and remain in) to resume operation.

NOTE: A damaged power supply cord must be replaced with a new power supply cord obtained from the product manufacturer and must not be repaired.
_____

Air conditioner seems to run too much
_____

The current air conditioner replaced an older model. The use of more efficient components may cause the air conditioner to run longer than an older model, but the total energy consumption will be less. Newer air conditioners do not emit the blast of cold air you may be accustomed to from older units, but this is not an indication of lesser cooling capacity or efficiency. Refer to the efficiency rating (EER) and capacity rating (in BTU/hr.) marked on the air conditioner.

The air conditioner is in a heavily occupied room, or heat-producing appliances are in use in the room. Use exhaust vent fans while cooking or bathing and try not to use heat-producing appliances during the hottest part of the day. A higher capacity air conditioner may be required, depending on the size of the room being cooled.
_____

Air conditioner cycles on and off too much, or does not cool/heat room in cooling/heating mode
_____

The Mode or Fan control is set to Power Saver (on some models). Use power Saver only when you are asleep or away from home, since the fan does not circulate the room air continuously. Use Low Cool, High Cool or Turbo Cool, Turbo Heat or Low Heat for your best comfort.

The air conditioner is not properly sized for your room. Check the cooling capabilities of your room air conditioner. Room air conditioners are not designed to cool multiple rooms.

The filter is dirty or obstructed by debris. Clean the filter.

The inside evaporator and outside condenser coils are dirty or obstructed by debris.

There is excessive heat or moisture (open container cooking, showers, etc.) in the room. Use a fan to exhaust heat or moisture from the room. Try not to use heat producing appliances during the hottest part of the day.

The louvers are blocked. Install the air conditioner in a location where the louvers are free from curtains, blinds, furniture, etc.

The outside temperature is below 65ºF (18ºC). Do not try to operate your air conditioner in the cooling mode when the outside temperature is below 65ºF (18ºC).

The temperature of the room you are trying to cool is extremely hot. Allow extra time for the air conditioner to cool off a very hot room.

Windows or doors to the outside are open. Close all windows and doors.

The temperature set point or Thermostat control is not at a cool enough setting. Adjust the temperature set point to a cooler setting by turning the knob clockwise to a lower number. Turn the Fan Speed control to Turbo Coo.

The air conditioner in the heating mode has insufficient BTU/H for the heating requirements of the room

Do not use the air conditioner as a primary source of heat.

_____
Water drips from cabinet into your house
_____

The air conditioner is not properly leveled. The air conditioner should slope slightly downward toward the outside. Level the air conditioner to provide a downward slope to ensure proper drainage. See the Installation Instructions.

NOTE: Do not drill a hole into the bottom of the metal base and condensate pan

WARRANTY

International Refrigeration Products warrants that the product supplied is free from defects in material and workmanship. This warranty is valid as long as this product is properly handled, installed, operated and serviced in accordance with the Installation and Operating Instructions shipped with this unit, and the warranty card is completed and mailed no later than 30 days after date of purchase. All warranty claims must be made within one (1) year (five (5) years for compressor) from date of purchase (unless national regulations require a longer registration period).

This warranty provides free replacement of defective parts only. Labor and replacement parts as a result of normal wear and tear are not covered under this warranty.

Additional claims are excluded, unless required by national regulations. International Refrigeration Products Inc. is not responsible for incidental, consequential, direct, or indirect damages or expenses relating to the use of, or the inability to use the product for any purpose. Other implied warranties are excluded.

This constitutes International Refrigeration Products warranty obligation and replaces any and all prior warranties for this product.
