Q What is Evaporative Cooling?

A Evaporative cooling is a method of converting hot air into a cool breeze using the process of evaporating water. It is similar to the cooling effect you feel when you immediately step out of the shower.

Q How Do Evaporative Coolers Work?

A Evaporative coolers pull hot dry air through wetted filters to produce cool refreshing air.

Q What Should I Look For In An Evaporative Cooler?

A Most people look for an evaporative cooler that offers:

- High Cooling Performance
- Long-Lasting Dependability
- Easy Maintenance & Repair
