**Things You Should Know**

- 1. It is unsafe and illegal in some areas to use propane in enclosed spaces of greater than 2 1/2" in water caps in occupied enclosures.
- 2. The usual storage areas for propane are the basement, attic, or garage. It is not recommended to store propane in cobwebs, etc. that is common in plastic bags and seal it with a rubber band.
- 3. For repair service, call 1-800-883-2222 or visit our website at www.coleman.com. For your nearest Coleman service center, attach your name and address to product and mail to us to write the service center or the specific model number: 5430-700.

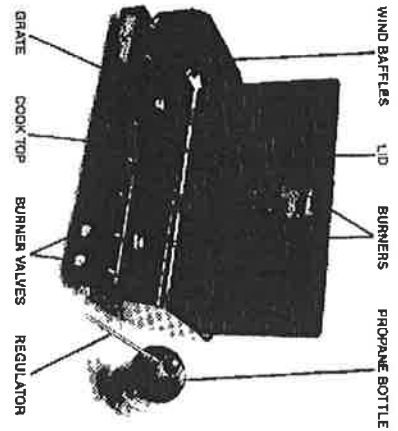

**Propane Fuel**

Two disposable propane bottles manufactured by Coleman. A standard 4.1 liter bottle will serve all the needs now with sizes A, 16.4 oz. disposable bottle available for better fuel economy longer burning time.

**PROPANE ACCESSORIES**

- DISTRIBUTION TREE**  
5114A770 (SHORT)  
5114A775 (TALL)  
Allows operation of appliances of one, two and three burner sizes: 18" and 30" - The 30" size positions the burner at table top height.

**BULK ADAPTOR**  
5410-3901  
Allows Coleman propane adaptors to operate from 20 lb propane bottles.

# 1 Follow Instructions And Warnings To Avoid Injury Or Fires.

## WARNING:

1. This stove consumes air (oxygen). Do not use in unventilated areas. Ample ventilation must be provided to avoid endangering your life.
2. Use as a cooking appliance only. Never alter in any way or use with any device or part not expressly approved by Coleman. Never use as a space heater. Never leave stove unattended while burning.
3. Never install or remove propane bottle while stove is ignited, near flame pilot lights, other ignition sources or while stove is hot to touch.
4. Never store propane near flame, pilot lights, other ignition sources or where temperatures exceed 120° F.
5. Never allow tents, sleeping bags, clothing or any flammable material to come within 3 feet of the top and 1 foot of all sides of the stove.
6. Never refill disposable propane bottles.
7. Keep all connectors and fittings clean. Inspect the "O" ring on the regulator for damage before use.
8. Propane is heavier than air and will accumulate in low places. If you smell gas, leave the enclosure immediately and ventilate thoroughly.
9. If using reliable propane bottle, use only Coleman parts and accessories. During stove set-up, check all hoses and fittings for leaks using soapy water. Never use a flame. Always keep reliable bottle outdoors; never inside house, camper or tent.
10. Clean stove frequently to avoid grease accumulations and possible grease fires.
11. Keep out of reach of children.

# 2 To Set Up

**NOTE:** The regulator is stored beneath the stove cooktop. See Section 5 below on how to disconnect the stove and remove the regulator.

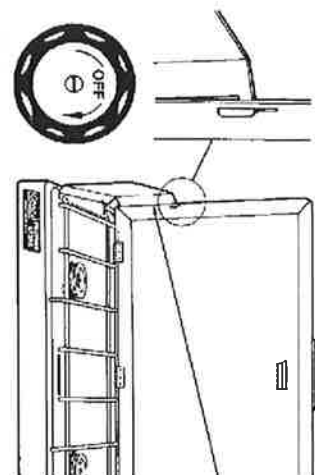

FIG. 1

1. Open lid and position wind baffles as shown.
2. Close both bunk doors.
3. Remove plastic cap and screw propane light.
4. Screw regulator

# 3 To Light

1. Hold lit/match near burner and open burner valve.
2. Adjust flame with burner valves.

BURNER VALVE

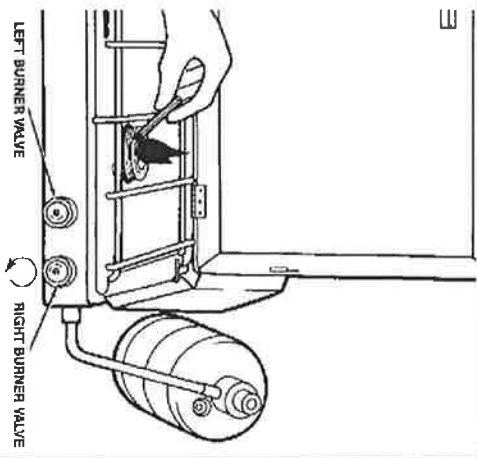

FIG. 2

# 4 To Turn Off

1. Close burner valves.

BURNER VALVE

# 5 To Store

1. Remove propane bottle from regulator.
2. Remove regulator from stove. Regulator can be stored under cooktop if desired.

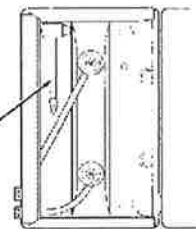

FIG. 3

# 6 To Clean

1. Lift off grate.
2. Remove wind baffles and lift o
3. Wipe clean with soft cloth and use abrasives.

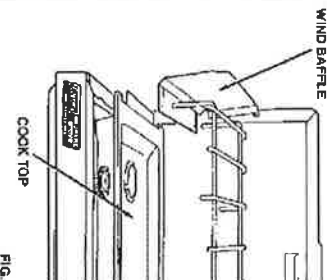

FIG. 4

### Cleaning instructions for 5430 campstove burners.

1. Open the lid and remove the stove grate.
2. Now, looking down into the stove, remove the screws (ID #9) from the center of each burner assembly (ID #1 & #10).
3. Next, lift up the cap, the complete fire ring assembly (ID #8), and the burner bowl from each burner assembly.
4. You can now remove the cook top (ID #3) from the stove case. Wearing a pair of heavy-duty work lift up the cook top and remove it from the stove case. **Please note\*\*the cook tops have very sharp edges; this is why you need to wear heavy-duty work gloves.**
5. To remove the burner body for cleaning, stand the stove up, lengthwise, on its side with the lid open (should look like the letter V). Looking at the back of the stove case, you will see two holes towards the center, and inside these two holes are two pal nuts. These nuts hold the burner bodies to the case. Using a 3/8" nut driver remove each of the pal nuts (ID #2). Once this is done, lay the stove down with the lid open on a flat surface. Lift up on the burner bodies and remove them from inside of the stove case.
6. You can now clean out the metal tubes on the burner bodies. Using a straightened coat hanger or a piece of flexible wire, twist a small piece of rag on the end. Push the wire from the open end of the tube up into the rounded end and pull it back out. Make sure the wire is pushed completely thru each of the metal tubes. Twist and turn the wire while pushing. This will clean out any spider nest and bug pouches that are adhered to the inside walls of the metal tubing. Blow the tubes out with compressed air after the tube has been cleaned internally with the wire. You can now reassemble the stove. Start with step 5, and work your way back to step 1.
